 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses RURAL Dispersion Only.

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:   3696 Source(s);       1 Source Group(s); and      11
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   3696 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
```

```
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  18081

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    45.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      7.1 MB of RAM.

memorandum

date	April 12, 2023
to	File
cc	Maria Hensel, Project Manager
from	Matt Fagundes, Air Quality/GHG Analyst
subject	Sonrisa Solar Project – Construction Water Truck Emissions

Introduction

Subsequent to the preparation of the Air Quality and Greenhouse Gas Emissions Analysis Technical Report (technical report) for the Sonrisa Solar Project (Project), the Applicant determined that 300 acre-feet of water would be needed for construction instead of the previously assumed 62 acre-feet. The technical report did not contain "water truck" as an on-site equipment type and additionally, did not indicate if the emissions estimates included water truck trips associated with the 62 acre-feet of water required for construction. Therefore, as a conservative approach, ESA estimated the criteria pollutant and greenhouse gas (GHG) emissions that would be associated with the proposed truck transport of all 300 acre-feet of water to the project site. This memorandum presents the emissions estimates associated with transporting the water to the project site and includes revised total emissions summaries for the Project.

Assumptions

It is assumed that 300 acre-feet of water would be delivered to the construction site by ten heavy-heavy duty trucks (HHDT) over a period of 15 months. This equates to over 78,419,000 gallons trucked to the site per year (i.e., 261 workdays). It is assumed that the water trucks would have a capacity of 5,000 gallons per truck and a total of 31,368 one-way trips would be required during the first 12-month rolling period of construction, which is an average of 120 one-way trips per day. The water would be obtained by Westlands Water District (WWD). It is assumed that trucks would be filled in close vicinity to the Project site, with one-way trips averaging 5 miles, and up to 0.5 mile of the trip occurring on the Project site. Emissions factors used in this analysis were obtained from the EMFAC2021 (v1.0.2) model and the U.S. Environmental Protection Agency (USEPA)'s AP-42.

The proposed perimeter road and existing interior access roads would be improved with the addition of an aggregate base or other native material and soil stabilization material, if necessary, and construction vehicle access to the site would be from West Manning Avenue (along the southern Project site boundary) and from West Adams Avenue (along the northern boundary), which are both paved roads. Any unpaved road travel would likely occur while the truck is spraying and traveling slowly. In addition, water trucks usually spray the road behind the

wheels, and often also in front. These are not the conditions considered when USEPA developed its unpaved road dust calculations. Therefore, entrained road dust emissions were estimated using USEPA's paved road dust emission factors.

Results

Tables 1 and **Table 2**, below, present the results of the maximum annual construction water truck criteria pollutant and GHG emissions modeling estimates, respectively. Table 3 presents the results of the maximum on-site daily construction water truck criteria pollutant modeling estimates. Also included in the tables are the revised total project construction emissions estimates. See attachments for more information about the construction water truck emissions estimates.

TABLE 1
MAXIMUM ANNUAL CRITERIA POLLUTANT CONSTRUCTION EMISSIONS (INCLUDING WATER TRUCK EMISSIONS)

Max. Rolling 12 Month Period	Annual Emissions (tons per year)					
	ROG	NOx	CO	SO_x	PM_{10}	$PM_{2.5}$
Annual Project Emissions (not included water truck-related emissions)	1.4	11.4	10.7	<0.1	7.3	1.3
Water Truck Emissions	**<0.1**	**0.6**	**0.3**	**<0.1**	**<0.1**	**<0.1**
Total Annual Emissions	1.4	12.0	11.0	0.1	7.3	1.3

1 Introduction

Dudek has prepared this biological resources report (report) in support of the proposed Sonrisa Solar Park Project (Project), a solar photovoltaic project located in Fresno County, California. This report describes the methodology for, and results of, various field surveys conducted to date, current site conditions, and provides an assessment of sensitive biological resources, including special-status species, with potential to occur on and in the vicinity of the Project site. This report also evaluates the potential impacts of the Project on biological resources and for those impacts considered potentially significant, describes measures to avoid, minimize, and/or mitigate these impacts. This report is intended to support Project planning and siting/design efforts, as well as future environmental review under the California Environmental Quality Act and regulatory review/permitting by the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), U.S. Army Corps of Engineers (USACE), and Regional Water Quality Control Board (RWQCB), as appropriate.

INTENTIONALLY LEFT BLANK

2 Project Background

The Project site is located in the western portion of the San Joaquin Valley, approximately 11 miles east of Interstate 5 and approximately 8 miles south of the City of Mendota, in unincorporated Fresno County. The Project site is located within Sections 17, 18, 19 of Township 15 South, Range 15 East, as shown on the Cantua Creek, Coit Ranch, Levis, and Tranquillity U.S. Geological Survey (USGS) 7.5-minute quadrangles.

The Project site encompasses approximately 1,700 acres of agricultural lands and is bounded by agricultural fields in all directions, with State Route 33 (SR-33) located immediately to the west (Figure 1, Project Location). West Adams Avenue forms the northern boundary of the site, while West Manning Avenue extends along the southern boundary of the site. In addition to the Project, the Project also includes a 230kV generation tie (gen-tie) line that will connect the proposed solar facility to the existing PG&E Tranquillity Switching Station, southwest of the Project site. The gen-tie extends from the southwest corner of the Project site along the west side of South Derrick Avenue for approximately 0.75 mile, and will be established to interconnect the proposed solar park to the existing Tranquillity Switching Station, as shown on Figure 2, Project Site. Switching Station and construction of a new 230 kV transmission line. The Tranquillity Switching Station would be expanded to the north approximately 200 feet, increasing the size of the switching station by approximately three acres, to accommodate a new bay for the Project, as well as a potential additional bay to accommodate future projects. The switching station's electrical busbar (a conducting bar that carries heavy currents to supply several electric circuits) would not increase in size. The new 230 kV transmission line would extend from the Tranquility Switching Station to a point located east of the existing substation near South Derrick Avenue. The PG&E transmission line would include approximately 1,900 feet of 230 kV conductor strung on approximately six new or existing tubular steel poles that would be approximately 140 feet high.

The Project site is zoned AE-20 (Exclusive Agricultural District) and has been historically used and managed for agricultural production purposes. According to crop data in the U.S. Department of Agriculture's National Agricultural Statistics Service, the site has been intermittently dry-farmed for wheat, barley, and grain hay crops over the past decade. Existing land uses surrounding the site are almost exclusively dominated by agricultural production, with a few large-scale solar energy projects in the region, including the Tranquillity Solar Project, located approximately 1 mile south of the Project site.

INTENTIONALLY LEFT BLANK

3 General Environmental Setting

3.1 Climate

The climate of the Project area is typical of inland valleys in California, with hot dry summers and cool, mild winters. Daytime temperatures in the summer often exceed 100 degrees Fahrenheit (°F), with lows in the 60s °F. In winter, daytime high temperatures are usually in the 50s °F, with lows around 35 °F. Radiation (Tule) fog is common in the winter, and may persist for extended periods.

3.2 Soils

A review of Natural Resources Conservation Service (NRCS) data resulted in the identification of three soil types mapped on the Project site and along the gen-tie alignment: Tranquillity clay, saline-sodic, wet, 0% to 1% slopes; Ciervo clay, saline-sodic, wet, 0% to 1% slopes; Ciervo, wet-Ciervo complex, saline-sodic, 0% to 1% slopes; and Calflax clay loam, saline-sodic, wet, 0% to 1% slopes MLRA 17 (USDA 2020) (Figure 3, Mapped Soil Types).

3.3 Topography

The Project site consists of flat terrain that slopes gradually from southwest to northeast. Elevations on the Project site range from approximately 165 feet above mean sea level (amsl) to 190 feet amsl.

3.4 Land Uses

The Project site is located near the western edge of the San Joaquin Valley near where it transitions to the central California Coast Ranges. As noted above, lands in the Project area are primarily agricultural and farmed with winter wheat, barley, and grain hay crops (USDA-NASS 2019). The nearest areas supporting natural habitats include the Mendota Wildlife Area and Fresno Slough 3.1 miles northeast and open rangelands associated with the interior Coast Range approximately 7.3 miles southwest. In addition, a review of the USDA's National Agricultural Statistics Service National Agricultural Statistics Service CropScape data from 2008 to 2018 showed the Project site was under agricultural production for this entire period (USDA-NASS 2019).

3.5 Hydrologic Features

The Project site and gen-tie alignment falls within the Huron hydrologic subarea of the Westlands hydrologic area located within the South Valley Floor hydrologic unit in the Tulare Lake Basin. Surface flow generated from the Project site is from the southwest to northeast based on existing topography, which is very gently sloping. The site does not support any indicators of concentrated flows; instead, any significant surface flows are expected to sheet flow over a relatively wide area and temporarily collect in low-lying areas or roadside ditches. Flows are only expected to exit the site during exceptional rainfall events producing significant rainfall over a short period.

INTENTIONALLY LEFT BLANK

4 Methods

Dudek conducted a literature review, an initial biological resources habitat suitability assessment, and subsequent focused biological surveys to determine whether sensitive biological resources are present, or potentially present, on or immediately adjacent to the Project site. The methods employed for the literature review and field surveys are described below.

4.1 Literature Review

Prior to conducting fieldwork, Dudek reviewed the following literature and database sources to assess the potential for special-status biological resources, including plants, wildlife, and aquatic resources, to occur on the Project site and immediate vicinity:

- California Natural Diversity Database (CNDDB; CDFW 2020a)
- USFWS Information for Planning and Conservation Trust Resources Report (USFWS 2020a)
- California Native Plant Society *Inventory of Rare and Endangered Plants* (CNPS 2020)
- Calflora: Information about California Plants for Education, Research and Conservation (Calflora 2020)
- USGS National Hydrography Dataset (USGS 2019)
- USFWS National Wetlands Inventory (USFWS 2020b)
- U.S. Department of Agriculture, Natural Resources Conservation Service Web Soil Survey (USDA 2020)
- U.S. Department of Agriculture, National Agricultural Statistics Service, Cropscape – Cropland Data Layer (USDA-NASS 2020)
- Tranquility Solar Generating Facility Project, Final Environmental Impact Report (County of Fresno 2014)

The CNDDB query covered the Cantua Creek, Coit Ranch, Levis, and Tranquillity 7.5-minute USGS quadrangles and the 12 surrounding quadrangles.

For the purposes of this report, special-status species are defined as those that meet one or more of the following criteria: (1) plants or animals listed or proposed for listing as threatened or endangered under the federal Endangered Species Act (ESA); (2) plants or animals that are candidates for possible future listing as threatened or endangered under the ESA; (3) plants or animals listed or proposed for listing as threatened or endangered under the California Endangered Species Act (CESA); (4) plants listed as rare under the California Native Plant Protection Act (California Fish and Game Code Section 1900 et seq.); (5) animal species, subspecies, or distinct populations designated as species of special concern by CDFW; and (6) plants assigned to one of the following California Rare Plant Ranks by the California Native Plant Society and collaborators.

- 1A – Presumed extirpated in California and either rare or extinct elsewhere
- 1B – Rare, threatened, or endangered in California and elsewhere
- 2A – Presumed extirpated in California, but more common elsewhere
- 2B – Rare, threatened, or endangered in California, but more common elsewhere

In addition to the special-status species noted above, other sensitive biological resources are defined as follows: (1) habitat areas or vegetation communities that are unique, are of relatively limited distribution, or are of particular

value to wildlife; (2) documented wildlife corridors and habitat linkages; and (3) areas of jurisdictional waters of the United States and state (including streams, creeks, and wetlands) subject to regulation by USACE, RWQCB, and/or CDFW.

4.2 Field Surveys

Dudek conducted initial biological resources habitat suitability assessments in Spring 2019 to document and characterize existing natural resources on the Project site and gen-tie alignment and to determine the potential for special-status plants and wildlife, as well as sensitive communities, such as wetlands, to occur. Parameters considered in the assessment included (1) existing conditions of the site and its current use, (2) isolation of the Project site from/proximity to other natural habitats in the region, and (3) extent and quality of native/natural communities present.

Dudek biologists then conducted various focused field surveys for target special-status wildlife species determined as potentially occurring within the areas of suitable habitat. During the initial biological resources assessment and all subsequent field assessments and focused surveys, Dudek biologists collected information on plants and wildlife observed on the Project site. The methodology employed for each of the field assessments and surveys is discussed in more detail below.

Biological resources field surveys and habitat assessments were not conducted within the Tranquillity Switching Station. The property is owned and operated by PG&E and access for biological field assessments was not available Because the Tranquillity Switching Station property is entirely developed/disturbed, sensitive natural resources are not expected to be present. Additionally, biological field assessments within the Tranquillity solar site were previously conducted by Rincon in 2013, and Dudek incorporated a review of the Final Environmental Impact Report (County of Fresno 2014) into this analysis.

4.2.1 Vegetation Community and Land Cover Mapping

Dudek characterized, documented, and mapped vegetation communities and other land covers on the Project site in June 2019 and along the gen-tie alignment in November 2020. Vegetation mapping was conducted consistent with *Vegetation Alliances and Associations: California Natural Community List Arranged Alphabetically by Life Form* (*California Natural Community List*; CDFW 2020b) based on the *Manual of California Vegetation*, Second Edition (Sawyer et al. 2009). These classification systems focus on a quantified, hierarchical approach that includes both floristic (plant species) and physiognomic (community structure and form) factors as currently observed (as opposed to predicting climax or successional stages). Vegetation communities were classified based on site factors, descriptions, distribution, and characteristic species present. Where the vegetation communities or land covers observed in the field did not match those described in Sawyer et al. (2009), Dudek generated additional site-specific vegetation community or land cover classifications, where necessary.

Dudek conducted vegetation mapping partly by walking the site and partly via windshield surveys, to provide 100 percent coverage of the Project site and gen-tie alignment. Following completion of the fieldwork, Dudek geographic information system (GIS) analysts digitized the vegetation boundaries as delineated by the field biologists and created a GIS coverage layer for the vegetation communities identified.

During the June and November site visits, Dudek biologists also identified aquatic resources, including wetlands, potentially subject to regulation under the federal Clean Water Act, the California Porter-Cologne Water Quality Control

Act and/or provisions of the California Fish and Game Code. Weather conditions during the site visits included clear skies with temperatures ranging from 61 to 80 degrees Fahrenheit, and five to ten mile per hour winds.

4.2.2 Burrowing Owl Surveys

Protocol-level breeding season surveys for burrowing owl (*Athene cunicularia*) were conducted in areas of potentially suitable habitat on the Project site between early April and the end of June 2019 per the guidelines for breeding-season surveys described in Appendix D of the *Staff Report on Burrowing Owl Mitigation* (CDFG 2012). Focused surveys for burrowing owl were not conducted along the gen-tie alignment. Due to the history of cultivation on the Project site, and the majority of the site being in active agricultural production (and recently tilled/disked), suitable habitat areas for burrowing owl were limited to roadside areas, ditches, and turnout areas, and these areas were the particular focus of the surveys conducted on the Project site. Dudek biologists performed an initial survey pass in April 2019, with two biologists walking the roadside areas, ditches, and turnout areas while searching for owls or sign of their presence. In turnout areas where the survey area was large enough to walk straight-line transects, biologists walked together with a maximum spacing of approximately 66 feet (20 meters). Biologists marked the location of all burrows approximately 4 inches or greater at the entrance using Esri ArcGIS Collector. Burrows were investigated for burrowing owl sign, including regurgitated castings (pellets) of prey remains, scat (whitewash), and feathers, and the locations of any burrowing owl individuals were recorded. Areas of California ground squirrel (*Spermophilus beecheyi*) activity were also noted. Surveys were largely conducted in morning hours when burrowing owls are typically active, from approximately 6:00 a.m. until approximately 10:00 am.

Based on the results of the initial survey pass, the portions of the survey area where active agricultural activities precluded the presence of suitable burrows or ground squirrel activity were eliminated from the survey area as being unsuitable for burrowing owl. Biologists employed the same methods in subsequent survey passes, focusing on the presence of burrowing owl sign and burrowing owls in the areas where suitable habitat was present. Three additional survey passes were conducted in the priority survey areas between May 2019 and July 15, 2019, with each of the survey passes separated by at least 3 weeks. Table 1 summarizes the focused surveys conducted for burrowing owl on the Project site in 2019.

Table 1. Summary of Burrowing Owl Surveys

Date	Time	Survey Type	Personnel	Site Conditions
4/12/2019	0800–1205	Burrowing Owl Survey	Emily Scricca & Pedro Garcia	58°F–71°F, 0% cloud cover, 10–17 mph winds
5/10/2019	0545–0915	Burrowing Owl Survey	Emily Scricca	58°F–67°F, 50%–70% cloud cover, 0–5 mph winds
5/31/2019	0530–0930	Burrowing Owl Survey	Emily Scricca	62°F–82°F, 20% cloud cover, 5–10 mph winds
6/21/2019	0543–1200	Burrowing Owl Survey	Randall McInvale	65°F–80°F, sunny and clear, 0% cloud cover, 5–10 mph winds

4.2.3 Multi-Species Burrow Assessment

A multi-species burrow assessment was conducted in areas of potentially suitable habitat on the Project site concurrent with the burrowing owl surveys described above. The multi-species burrow assessment was not

conducted along the gen-tie alignment. Dudek biologists examined and assessed all burrows observed for suitability/use by San Joaquin kit fox (kit fox; *Vulpes macrotis mutica*) and American badger (*Taxidea taxus*). All suitable habitat for kit fox (and American badger), as specified in the *San Joaquin Kit Fox Survey Protocol for the Northern Range* (USFWS 1999), was investigated. Because suitable habitat areas for these species on the Project site were coincident with those of burrowing owl and required overlapping survey/assessment methods, the multi-species burrow assessment occurred concurrently with the burrowing owl surveys. Other information, such as the presence of coyotes (*Canis latrans*) or other canids—such as red fox (*Vulpes vulpes*), grey fox (*Urocyon cinereoargenteus*), or other—were documented.

4.2.4 Swainson's Hawk Surveys

Focused Swainson's hawk surveys were conducted according to the CDFW-endorsed protocol for the Central Valley, developed by the Swainson's Hawk Technical Advisory Committee (SHTAC 2000). Focused protocol-level surveys were conducted in 2019, and supplemental reconnaissance-level surveys were conducted in 2020. During 2019, three surveys were conducted in Period III (April 5 to April 20) and three surveys were conducted in Period V (June 10 to July 31). In 2020, two reconnaissance-level surveys were conducted in Period III (April 5 to April 20), and one reconnaissance-level survey was conducted in Period V (June 10 to July 31). The protocol recommends that surveys be conducted during a minimum of two of the five survey periods. Period I (January to March) is considered an optional survey period during which Swainson's hawks may not be present on territories. Biologists also recorded any Swainson's hawk observations and behavior incidentally observed during other biological surveys conducted in 2019. Information gained in this fashion was used to inform the focused surveys. Table 2 summarizes the Swainson's hawk surveys conducted on the Project site in 2019 and 2020.

During each focused Swainson's hawk survey in 2019, biologists visited locations where suitable nest trees had been previously identified on the Project site and within approximately 5 miles of the site. In 2020, the two reconnaissance-level Swainson's hawk surveys focused on the Project site and within 0.5 miles of the site. Since surveys conducted during the June 10 to July 31 survey period in 2019 resulted in no observations of nesting Swainson's hawks or nesting behavior within 1 mile of the Project site, the survey was expanded to include a 5.0-mile buffer of the Project site in an attempt to locate nesting birds within the region that could potentially use the Project site as foraging habitat. The gen-tie alignment was surveyed in its entirety for Swainson's hawk as it was included within the survey buffers of prior surveys conducted in 2019 and 2020. Where possible, trees or tree clusters were examined from multiple angles and for extended periods. Trees that were confirmed not to have nests during early surveys were not prioritized during later surveys. Some areas where biologists did not have access to private roads received relatively limited coverage. Locations of any observed Swainson's hawks and suitable or active nest structures were documented and mapped.

Table 2. Summary of Swainson's Hawk Surveys

Date/Times	Times	Survey Type	Personnel	Site Conditions
2019 Surveys

4.2.5 Delineation of Potentially Jurisdictional Aquatic Resources

A delineation of potentially jurisdictional aquatic resources that encompassed the entire Project site and gen-tie alignment was completed by Dudek biologist Randall McInvale on June 21, 2019, and Dudek biologist Emily Scricca on November 18, 2020. The delineations were conducted to confirm site conditions and investigate the presence of aquatic features that would be subject to regulation by USACE, RWQCB, and CDFW. The entire Project site and gen-tie alignment was surveyed for the presence of hydrophytic vegetation and evidence of hydrology.

The delineation was performed in accordance with the methods prescribed in the 1987 *Wetland Delineation Manual* (TR Y-87-1) (USACE 1987), the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (USACE 2008a), *A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States* (USACE 2008b). For non-tidal waters of the United States, USACE generally takes jurisdiction within rivers and streams to the lateral extent of the OHWM,

where no adjacent wetlands are present. If adjacent wetlands are present, the jurisdiction extends to the limit of wetlands. Determination of USACE and RWQCB jurisdiction consists of the field identification of jurisdictional wetlands using the three parameters described in the USACE manual: hydrophytic vegetation, hydric soils, and hydrology (USACE 1987). The presence of a defined channel (bed and bank) and/or predominance of hydrophytic vegetation (riparian vegetation), where associated with a stream channel, is used to determine the extent of CDFW jurisdiction.

5 Results

This section discusses results of the literature review, biological resources habitat suitability assessment, and focused surveys conducted in 2019 and 2020 as described in Chapter 4, Methods. Descriptions of soil types occurring on the Project site are provided in Appendix A. A cumulative list of wildlife species observed during the field surveys is included in Appendix B. A plant compendium is not included because focused plant surveys were not conducted on the Project site; however, descriptions of the dominant vegetation communities and land cover types are included below for characterization of the Project site. Photo documentation of site conditions observed during the field surveys is provided in Appendix C.

At the time of the site visits, the Project site and gen-tie alignment was not being actively farmed, but portions of the site had been recently disked, presumably in preparation for the next dry farming rotation.

5.1 Existing Conditions

Vegetation Communities and Land Cover Types

The vegetation communities and land cover types observed on the Project site are shown on Figure 4, Vegetation Communities and Land Cover Types. Two land cover types, including tamarisk thickets and general agriculture, were mapped within the Project site and gen-tie alignment. No native vegetation communities or any sensitive vegetation communities were identified within the Project site. The gen-tie line alignment associated with the project is located adjacent to roads that would be considered "Developed," such as existing paved roads and/or farm service roads.

The dominant land cover type on the Project site and gen-tie alignment is general agriculture. General agriculture is an anthropogenic land cover type, is not described in the *Manual of California Vegetation* (Sawyer et al. 2009) or *California Natural Community List* (CDFW 2020b), and does not have a state sensitivity ranking, as it is composed of non-native species. Farming practices on the site include soil disking and tilling, crop planting/production, and herbicide application, as well as regular maintenance and disturbance of areas under agricultural production. Historically, agricultural production on the Project site has included barley, wheat, and grain hay crops. As of 2018, the site was predominantly used for grain hay, with a few fields along the southeastern section of the Project site left fallow. It was evident that certain areas of the site had been recently disked, as the survey areas supported little to no standing vegetation and appeared to be under agricultural production with grain hay crops.

Two small tamarisk thicket communities, which are dominated by tamarisk (*Tamarix aphylla)* and (*Tamarix ramosissima*), occur within the Project site along South Monterey Avenue and South Derrick Avenue. Tamarisk Thickets Shrubland Semi-Natural Alliance ("tamarisk thickets") is listed in the *Manual of California Vegetation* and *California Natural Community List* but does not have a state sensitivity ranking, as it is composed of non-native species. Tamarisk thickets include tamarisk or other *Tamarix* spp. dominant in the shrub canopy. Emergent trees may be present at low levels of cover, including Fremont cottonwood (*Populus fremontii*) or willow (*Salix spp*.). None of these emergent tree species were observed within the tamarisk communities mapped on the Project site. Tamarisk thickets typically occur at the margins of arroyos, lakes, ditches, washes, rivers, and other watercourses (Sawyer at al. 2009).

Wildlife

During the initial biological resources habitat suitability assessment and subsequent focused surveys for special-status species, Dudek biologists documented all wildlife species observed.

No amphibian species were observed during the surveys. One common reptile species, gophersnake (*Pituophis catenifer*), was observed on the Project site during the field survey efforts.

The expanse of open agricultural fields on the Project site provides suitable foraging habitat for a variety of common raptor species. Several large trees and electrical transmission line towers adjacent to the site also provide suitable nesting habitat. Several raptor species were frequently observed throughout the Project site during various field surveys, including but not limited to, red-tailed hawk (*Buteo jamaicensis*), barn owl (*Tyto alba*), and great-horned owl (*Bubo virginianus*). Swainson's hawk (*Buteo swainsoni*), a state-listed threatened species, was also observed and is discussed in more detail in Section 5.2.2, Special-Status Wildlife Species.

The site also provides habitat for a variety of common non-raptor bird species. Species observed during the field surveys included common raven (*Corvus corax*), mourning dove (*Zenaida macroura*), northern mockingbird (*Mimus polyglottos*), western meadowlark (*Sturnella neglecta*), house finch (*Haemorhous mexicanus*), white-crowned sparrow (*Zonotrichia leucophrys*), Eurasian collared-dove (*Streptopelia decaocto*), western kingbird (*Tyrannus verticalis*), mourning dove (*Zenaida macroura*), and loggerhead shrike (*Lanius ludovicianus*).

Depending on crop production cycles, the agricultural fields on the Project site likely provide cover and foraging habitat for a variety of common small mammal species at different times of the year, including species such as house mouse (*Mus musculus*), deer mouse (*Peromyscus maniculatus*), California vole (*Microtus californicus*), and harvest mouse (*Reithrodontomys megalotis*). Small mammal burrows were observed during various survey efforts, but were largely limited to the ruderal and disturbed areas along the margins of the fields and farm service roads. Several burrows showed sign of use (e.g., tracks, scat) by California ground squirrel. Mammal species observed included desert cottontail (*Sylvilagus audubonii*) and black-tailed jackrabbit (*Lepus californicus*). However, intensive agricultural practices such as disking, harvesting, and use of rodenticides limit the abundance of small mammal species. Coyote and red fox are known to occur in the region and may use the Project site for foraging and/or dispersal.

5.2 Sensitive Biological Resources

5.2.1 Special-Status Plant Species

Dudek's habitat suitability analysis for special-status plants is based on vegetation, soils, topography, elevation, and previous documented occurrences of special-status plants in the vicinity of the site. The Project site and gen-tie alignment lacks habitat for special-status plant species, due to the extent of intensive and ongoing disturbance from agricultural production and management activities and a lack of suitable natural communities that typically support the species occurring in the region. In addition, the nearest CNDDB occurrence records for most special-status plant species in the region are more than 5.0 miles from the Project site (CDFW 2020a). For these reasons, focused surveys for special-status plants were not conducted on the Project site or the gen-tie alignment.

Table 3 lists the 25 special-status plant species documented within the region of the Project site, describes habitat requirements, and provides an assessment of their potential to occur.

Table 3. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet amsl)	Potential to Occur
Allium howellii var. *sanbenitense*	San Benito onion	None/None/1B.3	Chaparral (openings), valley and foothill grassland; clay, often steep slopes/perennial bulbiferous herb/Apr–May/1,275–4,480	Not expected to occur. The site is outside the species' known elevation range. The Project site lacks chaparral (openings) and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Atriplex cordulata var. *cordulata*	heartscale	None/None/1B.2	Chenopod scrub, meadows and seeps, valley and foothill grassland (sandy); saline or alkaline/annual herb/Apr–Oct/0–1,835	Not expected to occur. The Project site lacks suitable chenopod scrub, meadows and seeps, and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Atriplex coronata var. *vallicola*	Lost Hills crownscale	None/None/1B.2	Chenopod scrub, valley and foothill grassland, vernal pools; alkaline/annual herb/Apr–Sep/160–2,085	Not expected to occur. The Project site lacks suitable chenopod scrub and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Atriplex depressa	brittlescale	None/None/1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pools; alkaline, clay/annual herb/Apr–Oct/0–1,050	Not expected to occur. The Project site lacks suitable chenopod scrub, meadows and seeps, playas, valley and foothill grassland, and vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Atriplex minuscula	lesser saltscale	None/None/1B.1	Chenopod scrub, playas, valley and foothill grassland; alkaline, sandy/annual herb/May–Oct/45–655	Not expected to occur. The Project site lacks suitable chenopod scrub, playa, and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Atriplex persistens	vernal pool smallscale	None/None/1B.2	Vernal pools (alkaline)/annual herb/June, Aug, Sep, Oct/30–375	Not expected to occur. The Project site lacks suitable vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Atriplex subtilis	subtle orache	None/None/1B.2	Valley and foothill grassland; alkaline/annual herb/June, Aug, Sep(Oct)/130–330	Not expected to occur. The Project site lacks suitable valley and foothill grassland habitat. In addition, there

Table 3. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet amsl)	Potential to Occur
				are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Caulanthus lemmonii	Lemmon's jewelflower	None/None/1B.2	Pinyon and juniper woodland, valley and foothill grassland/annual herb/Feb–May/260–5,185	Not expected to occur. The Project site lacks suitable pinyon and juniper woodland and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Chloropyron palmatum	palmate-bracted bird's-beak	FE/SE/1B.1	Chenopod scrub, valley and foothill grassland; alkaline/annual herb (hemiparasitic)/May–Oct/15–510	Not expected to occur. The Project site lacks suitable chenopod scrub and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Deinandra halliana	Hall's tarplant	None/None/1B.2	Chenopod scrub, cismontane woodland, valley and foothill grassland; clay, sometimes alkaline/annual herb/(Mar)Apr–May/850–3,115	Not expected to occur. The site is outside the species' known elevation range. The Project site lacks suitable chenopod scrub, cismontane woodland, and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Delphinium recurvatum	recurved larkspur	None/None/1B.2	Chenopod scrub, cismontane woodland, valley and foothill grassland; alkaline/perennial herb/Mar–June/5–2,590	Not expected to occur. The Project site lacks suitable chenopod scrub, cismontane woodland, and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Eryngium spinosepalum	spiny-sepaled button-celery	None/None/1B.2	Valley and foothill grassland, vernal pools/annual/perennial herb/Apr–June/260–3,200	Not expected to occur. The Project site lacks suitable valley and foothill grassland, and vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Extriplex joaquinana	San Joaquin spearscale	None/None/1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland; alkaline/annual herb/Apr–Oct/0–2,740	Not expected to occur. The Project site lacks suitable chenopod scrub, meadows and seeps, playa, and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).

Table 3. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet amsl)	Potential to Occur
Fritillaria viridea	San Benito fritillary	None/None/1B.2	Chaparral, cismontane woodland; serpentinite slopes; sometimes streambanks, sometimes rocky, sometimes roadsides/perennial bulbiferous herb/Mar–May/655–5,005	Not expected to occur. The site is outside the species' known elevation range and there is no suitable habitat or soils present. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Layia discoidea	rayless layia	None/None/1B.1	Chaparral, cismontane woodland, lower montane coniferous forest; serpentinite, talus and alluvial terraces/annual herb/May/2,605–5,200	Not expected to occur. The site is outside the species' known elevation range and there is no suitable habitat or soils present. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Layia heterotricha	pale-yellow layia	None/None/1B.1	Cismontane woodland, coastal scrub, pinyon and juniper woodland, valley and foothill grassland; alkaline or clay/annual herb/Mar–June/980–5,595	Not expected to occur. The site is outside of the species' known elevation range. The Project site lacks suitable cismontane woodland, coastal scrub, pinyon and juniper woodland, and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Layia munzii	Munz's tidy-tips	None/None/1B.2	Chenopod scrub, valley and foothill grassland (alkaline clay)/annual herb/Mar–Apr/490–2,295	Not expected to occur. CNDDB provides a general location for a historical (1940) occurrence, "8–9 miles south of Mendota" that is centered just northeast of the Project site; however, the site is disturbed and unlikely to support this species.
Lepidium jaredii ssp. *album*	Panoche pepper-grass	None/None/1B.2	Valley and foothill grassland (steep slopes, clay, sometimes alkaline)/annual herb/Feb–June/605–2,445	Not expected to occur. The site is outside the species' known elevation range. The Project site lacks valley and foothill grassland. The nearest CNDDB occurrence is approximately 3.9 miles west of the Project site (CDFW 2020a).
Madia radiata	showy golden madia	None/None/1B.1	Cismontane woodland, valley and foothill grassland/annual herb/Mar–May/80–3,985	Not expected to occur. The Project site lacks suitable cismontane woodland and valley and foothill grassland habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).

Table 3. Special-Status Plant Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet amsl)	Potential to Occur
Malacothamnus aboriginum	Indian Valley bush-mallow	None/None/1B.2	Chaparral, cismontane woodland; rocky, granitic, often in burned areas/perennial deciduous shrub/Apr–Oct/490–5,575	Not expected to occur. The site is outside the species' known elevation range and there is no suitable habitat or soils present. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Monolopia congdonii	San Joaquin woollythreads	FE/None/1B.2	Chenopod scrub, valley and foothill grassland (sandy)/annual herb/Feb–May/195–2,625	Not expected to occur. CNDDB provides a general location, "6 miles south of Mendota," for a historical (1935) occurrence that falls just north of the Project site and is noted as "possibly extirpated." However, the site is disturbed and unlikely to support this species.
Navarretia nigelliformis ssp. *radians*	shining navarretia	None/None/1B.2	Cismontane woodland, valley and foothill grassland, vernal pools; sometimes clay/annual herb/(Mar)Apr–July/210–3,280	Not expected to occur. The Project site lacks suitable cismontane woodland, valley and foothill grassland, and vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Puccinellia simplex	California alkali grass	None/None/1B.2	Chenopod scrub, meadows and seeps, valley and foothill grassland, vernal pools; alkaline, vernally mesic; sinks, flats, and lake margins/annual herb/Mar–May/5–3,050	Not expected to occur. The Project site lacks suitable chenopod scrub, meadows and seeps, valley and foothill grassland, and vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Sagittaria sanfordii	Sanford's arrowhead	None/None/1B.2	Marshes and swamps (assorted shallow freshwater)/perennial rhizomatous herb (emergent)/ May–Oct(Nov)/0–2,135	Not expected to occur. No suitable habitat or soils present. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Senecio aphanactis	chaparral ragwort	None/None/2B.2	Chaparral, cismontane woodland, coastal scrub; sometimes alkaline/annual herb/Jan–Apr(May)/45–2,625	Not expected to occur. The Project site lacks suitable chaparral, cismontane woodland, and coastal scrub habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).

Notes: amsl = above mean sea level.
Status Legend
CRPR – California Rare Plant Rank
1A: Plants presumed extirpated in California and either rare or extinct elsewhere

1B: Plants rare, threatened, or endangered in California and elsewhere
2A: Plants presumed extirpated in California, but common elsewhere
2B: Plants rare, threatened, or endangered in California, but more common elsewhere

Threat Rank

0.1 – Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
0.2 – Moderately threatened in California (20%–80% of occurrences threatened/moderate degree and immediacy of threat)
0.3 – Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

Federal Designations

FE: Federally listed as endangered

State Designations

SE: State listed as endangered

5.2.2 Special-Status Wildlife Species

Focused wildlife surveys were conducted on the Project site in 2019 to document the presence or absence of select special-status species (burrowing owl and Swainson's hawk) that are known to occur in the region and that have potential to occur on or adjacent to the site. Supplemental reconnaissance-level surveys for Swainson's hawk were conducted in 2020. The CNDDB and USFWS Information for Planning and Consultation (CDFW 2020a; USFWS 2020a) queries resulted in identification of 33 special-status wildlife species that have potential to occur (i.e., utilize the site for breeding, foraging, movement, and/or wintering habitat) based on habitat suitability and that have been previously documented on the site or in the region. Dudek eliminated 22 of these species from further consideration based on several factors, such as lack of suitable aquatic habitat; regular tilling and agricultural production and management activities that preclude occupancy by smaller vertebrates requiring burrows, such as reptiles, amphibians, or small mammals; or the site being outside the species' known range. In addition, many special-status avian species that occur in the area may only occasionally fly over or forage on the site but are not expected to breed on the site.

Table 4 lists the special-status wildlife species that are known to occur or have some potential to occur on the Project site based upon soils, vegetation, and elevation factors and/or documented occurrence in the region of the Project site. Figure 5, Special-Status Wildlife Observations, shows the special-status wildlife species that have been recorded by the CNDDB within 5.0 miles of the Project site. Note that the species list was built for this analysis from a CNDDB query that included the 4 USGS quadrangles where the Project site occurs, plus the 12 surrounding USGS quadrangles. Therefore, the species list in Table 4 includes species in CNDDB that have been recorded within a distance of greater than 10.0 miles. Table 4 lists the sensitivity status, habitat preference, and potential to occur for each of these species. Categories for potential to occur include "observed" (known to occur), "high potential to occur," "moderate potential to occur," low potential to occur," and "not expected to occur", based on habitat preferences, range, and existing habitat observed on site. Species determined as "not expected to occur" are not discussed further in this report. Those species with some potential to occur or that were observed on the site by Dudek biologists (a total of 11 species) are discussed further below.

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Amphibians				
Rana boylii	foothill yellow-legged frog	None/SE[1], SSC	Rocky streams and rivers with open banks in forest, chaparral, and woodland	Not expected to occur. The Project site lacks suitable aquatic habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Rana draytonii	California red-legged frog	FT/SSC	Lowland streams, wetlands, riparian woodlands, livestock ponds; dense, shrubby or emergent vegetation associated with deep, still or slow-moving water; uses adjacent uplands	Not expected to occur. The Project site lacks suitable aquatic habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Spea hammondii	western spadefoot	None/SSC	Primarily grassland and vernal pools, but also in ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture	Not expected to occur. The Project site lacks suitable aquatic and upland habitat required for this species. In addition, the nearest CNDDB occurrence is approximately 4.4 miles southwest of the Project site (CDFW 2020a).
Reptiles				
Actinemys marmorata	northwestern pond turtle	None/SSC	Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter	Not expected to occur. The Project site lacks suitable aquatic habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Anniella pulchra	northern California legless lizard	None/SSC	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands, associated with sparse vegetation and sandy or loose, loamy soils	Not expected to occur. The Project site lacks suitable habitat required for this species, and ongoing tilling practices preclude this species from occurring. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Arizona elegans occidentalis	California glossy snake	None/SSC	Commonly occurs in desert regions throughout southern California; prefers open sandy areas with scattered brush; also found in rocky areas	Not expected to occur. The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within

[1] The East/Southern Sierra Clade of Foothill Yellow-legged frog was listed as a State Endangered species in April 2020.

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
				approximately 5 miles of the Project site (CDFW 2020a).
Gambelia sila	blunt-nosed leopard lizard	FE/SE, FP	Sparsely vegetated alkali and desert scrubs, including semi-arid grasslands, alkali flats, and washes	Not expected to occur. The Project site lacks suitable habitat required for this species and ongoing agricultural production activities, including disking/tilling, preclude this species from occurring In addition, the nearest CNDDB occurrence is approximately 4.8 miles southwest of the Project site (CDFW 2020a).
Masticophis flagellum ruddocki	San Joaquin whipsnake	None/SSC	Open, dry, treeless areas including grassland and saltbush scrub	Not expected to occur. The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Phrynosoma blainvillii	Blainville's horned lizard	None/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats	Not expected to occur. The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Thamnophis gigas	giant gartersnake	FT/ST	Freshwater marsh habitat and low-gradient streams; also uses canals and irrigation ditches	Not expected to occur. The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Thamnophis hammondii	two-striped gartersnake	None/SSC	Streams, creeks, pools, streams with rocky beds, ponds, lakes, vernal pools	Not expected to occur. The Project site lacks suitable habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Birds				
Agelaius tricolor (nesting colony)	tricolored blackbird	None/ST, SSC	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry and other upland herbaceous vegetation; forages in grasslands, woodland, and agriculture	Not expected to nest but low potential to forage onsite. No suitable nesting habitat is present on the Project site. However, the Project site does provide some suitable foraging habitat (agricultural fields), and the species is known to

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
				nest approximately 3.5 miles northeast of the Project site (CDFW 2020a). Additional suitable habitat is known from the Mendota Wildlife Area. Therefore, the species could potentially occur on site during winter and/or foraging during nesting season.
Asio flammeus (nesting)	short-eared owl	None/SSC	Grassland, prairies, dunes, meadows, irrigated lands, and saline and freshwater emergent wetlands	Not expected to nest but low potential to forage onsite. While there are no breeding occurrences within approximately 5 miles of the Project site (CDFW 2020a), the Project site has marginally suitable ground nesting vegetation and herbaceous cover within the tamarisk thicket communities, but it is unlikely the species would use these areas for nesting given the surrounding disturbance. However, the Project site does provide suitable foraging habitat for this species.
Athene cunicularia (burrow sites & some wintering sites)	burrowing owl	None/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows	Low potential to occur. The nearest CNDDB occurrence is approximately 3.6 miles northeast of the Project site (CDFW 2020a). The Project site provides suitable foraging habitat and limited nesting habitat. During CDFW protocol surveys that were conducted on the site, no burrowing owls were observed.
Buteo swainsoni (nesting)	Swainson's hawk	None/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture	Observed (nesting). The Project site provides suitable nesting and foraging habitat. In 2019, one pair of Swainson's hawks were observed nesting within the Project site in April, but ultimately the nest failed and became inactive. Surveys conducted in 2019 per CDFW-endorsed survey protocols resulted in no observations of successful Swainson's hawk nesting on the site or within a 1-mile buffer; however, two successful Swainson's hawk nests were observed within a 5-mile buffer. During reconnaissance-level surveys in 2020, one pair of Swainson's hawks was observed nesting within the Project site in April,

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
				and another pair was observed nesting along one of the potential gen-tie line alignments. The nearest CNDDB occurrence is approximately 5.6 miles north of the Project site (CDFW 2020a).
Charadrius montanus (wintering)	mountain plover	None/SSC	Winters in shortgrass prairies, plowed fields, open sagebrush, and sandy deserts	Not expected to nest, but moderate potential to winter or forage. The Project site provides suitable wintering habitat and there is some potential for the species to occur during winter or migration. Records for this species are scarce in the region, however, and many areas of apparently suitable habitat are unoccupied. The nearest CNDDB occurrence is approximately 4.6 miles northeast of the Project site (CDFW 2020a).
Circus cyaneus (nesting)	northern harrier	None/SSC	Nests in open wetlands including marshy meadows, wet lightly-grazed pastures, old fields, freshwater and brackish marshes, but also in drier habitats such as grassland and grain fields; forages in variety of habitats, including grassland, scrubs, rangelands, emergent wetlands, and other open habitats	Not expected to nest but observed foraging onsite. Overall, the site lacks the tall dense ground cover required for suitable nesting habitat, however there is marginally suitable ground nesting vegetation and herbaceous cover within the tamarisk thicket communities, but it is unlikely the species would use these areas for nesting given the surrounding disturbance. However, the site does provide suitable foraging habitat, and one bird was observed hunting within the Project site during reconnaissance-level surveys in 2020.
Coccyzus americanus occidentalis (nesting)	western yellow-billed cuckoo	FT/SE	Nests in dense, wide riparian woodlands and forest with well-developed understories	Not expected to occur. The Project site does not provide suitable nesting or foraging habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Lanius ludovicianus (nesting)	loggerhead shrike	None/SSC	Nests and forages in the open habitats with scattered shrubs, trees, or other perches	Observed. Suitable nesting and foraging habitat is present on the Project site within the Tamarisk communities. Loggerhead shrikes were observed on site during survey efforts.
Gymnogyps californianus	California condor	FE/SE, FP	Nests in rock formations, deep caves, and occasionally in cavities in giant sequoia trees (*Sequoiadendron giganteum*); forages in	Not expected to occur. The Project site does not provide suitable nesting habitat, and foraging habitat for this species is marginal on site. In

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
			relatively open habitats where large animal carcasses can be detected	addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Riparia riparia (nesting)	bank swallow	None/ST	Nests in riparian, lacustrian, and coastal areas with vertical banks, bluffs, and cliffs with sandy soils; open country and water during migration	Not expected to occur. No suitable nesting habitat is present on site or nearby. In addition, there are no breeding occurrences within approximately 5 miles of the Project site (CDFW 2019a). However, while the species is not expected to nest on site, it may pass through on rare occasions during migration.
Fishes				
Hypomesus transpacificus	Delta smelt	FT/SE	Sacramento–San Joaquin Delta; seasonally in Suisun Bay, Carquinez Strait, and San Pablo Bay	Not expected to occur. The Project site does not provide suitable aquatic habitat for this species.
Mammals				
Ammospermophilus nelsoni	Nelson's antelope squirrel	None/ST	Arid annual grassland and shrubland with saltbush (*Atriplex* spp.), California jointfir (*Ephedra californica*), bladderpod (*Physaria* spp.), goldenbush (Astereae), and snakeweed (*Gutierrezia* spp.)	Not expected to occur. No suitable habitat present on the Project site. The clay loam soils and regular agricultural production activities, including ongoing disking/tilling, make the site unsuitable for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Dipodomys ingens	giant kangaroo rat	FE/SE	On fine sandy loam soils with sparse forb vegetation and low-density alkali desert scrub	Not expected to occur. No suitable habitat present on the Project site. The clay loam soils and regular agricultural production activities, including ongoing disking/tilling, make the site unsuitable for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Dipodomys nitratoides exilis	Fresno kangaroo rat	FE/SE	Alkali sink/open grassland habitats; sands and saline sandy soils in chenopod scrub	Not expected to occur. No suitable habitat present on the Project site. The clay loam soils and regular agricultural production activities, including ongoing disking/tilling, make the site unsuitable for this species. In addition, there are no

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
				occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Eumops perotis californicus	western mastiff bat	None/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels	Not expected to roost but low potential to forage over the site. The Project site and vicinity lacks suitable substrates for roosting. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2020a). In addition, this species has a low potential to forage because of the lack of suitable roosting habitat in the vicinity.
Lasiurus blossevillii	western red bat	None/SSC	Forest, woodland, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange; roosts in tree canopy	Low potential to occur. The tamarisk thicket communities within the Project site provide limited/marginal habitat for roosting. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2020a), although this species is known to occur in the San Joaquin Valley.
Onychomys torridus tularensis	Tulare grasshopper mouse	None/SSC	Low, open scrub, and semi-scrub habitats in arid Lower Sonoran associations	Not expected to occur. No suitable habitat present on the Project site. The clay loam soils and regular agricultural production activities, including ongoing disking/tilling of the Project site, makes the site unsuitable for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).
Taxidea taxus	American badger	None/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils	Low potential to occur. Although badgers will utilize a variety of habitats (including agricultural fields), the majority of the Project site is regularly tilled and heavily managed, which makes most of the site unsuitable. No suitable burrows for badger were observed during the multi-species burrow assessment. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a). However, there is potential for this species to use the site for foraging or to pass through the site on occasion during dispersal movements.

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Vulpes macrotis mutica	San Joaquin kit fox	FE/ST	Grasslands and scrublands, including those that have been modified; oak woodland, alkali sink scrubland, vernal pool, and alkali meadow	Low potential to occur. The Project site provides suitable habitat where this species may forage. No suitable burrows were observed during the multi-species burrow assessment. The nearest CNDDB observation is approximately 5.7 miles southwest of the Project site (CDFW 2020a). Although no sign of this species was observed on the site, it occurs within the region and could pass through the Project site in the future, during dispersal or migratory movements.
Invertebrates				
Bombus crotchii	Crotch bumble bee	None/PSE	Open grassland and scrub communities supporting suitable floral resources.	Not expected to occur. The clay loam soils and regular agricultural production activities, including ongoing disking/tilling of the Project site, makes the site unsuitable for this species. The site supports very little standing vegetation and virtually no floral resources. Additionally, the surrounding land uses are primarily agricultural, and the nearest natural habitats are 3.1 miles to the northeast. Therefore, this species is not anticipated to be present based on the lack of suitable foraging habitat and sufficient habitat for nesting and overwintering. There are no known occurrences of this species within approximately 5 miles of the Project site (CDFW 2020a).
Branchinecta longiantenna	longhorn fairy shrimp	FE/None	Sandstone outcrop pools, alkaline grassland vernal pools, and pools within alkali sink and alkali scrub communities	Not expected to occur. The Project site lacks suitable aquatic habitat required for this species. The nearest CNDDB occurrence is approximately 2.7 miles northeast of the Project site (CDFW 2020a).

Table 4. Special-Status Wildlife Species and Their Potential to Occur on the Project Site

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Branchinecta lynchi	vernal pool fairy shrimp	FT/None	Vernal pools, seasonally ponded areas within vernal swales, and ephemeral freshwater habitats	Not expected to occur. The Project site lacks suitable aquatic habitat required for this species. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2020a).

Status Legend
Federal
FE: Federally listed as endangered
FT: Federally listed as threatened
State
FP: CDFW fully protected species
SE: State listed as endangered
ST: State listed as threatened
SSC: CDFW species of special concern
PSE: Proposed State Endangered

5.2.2.1 Special-Status Birds

Ten special-status bird species were identified as occurring in the vicinity of the Project site and the gen-tie alignment, all of which are either listed as endangered or threatened under ESA or CESA or designated as a California species of special concern (SSC). Those species include tricolored blackbird (*Agelaius tricolor*), burrowing owl, Swainson's hawk, short-eared owl (*Asio flammeus*), mountain plover (*Charadrius montanus*), northern harrier (*Circus cyaneus*), western yellow-billed cuckoo (*Coccyzus americanus occidentalis*), loggerhead shrike, California condor (*Gymnogyps californianus*), and bank swallow (*Riparia riparia*).

The Project site provides suitable foraging and nesting habitat for many of these species, and while a number of individuals were observed during field surveys (i.e., Swainson's hawk, northern harrier, and loggerhead shrike), no special-status birds, with the exception of Swainson's hawk, were observed nesting within the Project area. The gen-tie alignment provides suitable foraging habitat for several species, however nesting habitat is limited, as there is little to no nesting substrate within the alignment area. Vegetation within the gen-tie alignment is limited to roadside weeds and grasses, therefore nesting by special-status bird species in this area would not be expected.

Focused protocol-level breeding season surveys for burrowing owl were conducted April 12, May 10, May 31, and June 21, 2019. Protocol-level surveys for Swainson's hawk were conducted April 11, April 17–19, June 20 and 21, July 1, and July 10 and 11, 2019. Supplemental surveys for Swainson's hawk were conducted April 12 and 13 and April 16 and 17, 2020.

Several of these species are considered to have some potential to occur on the Project site and are further discussed below.

Burrowing Owl

Burrowing owl is a California SSC. With a relatively wide-ranging distribution throughout the west, burrowing owls are considered to be habitat generalists (Lantz et al. 2004). In California, burrowing owls are yearlong residents of open, dry grassland and desert habitats, and in grass, forb and open shrub stages of pinyon-juniper and ponderosa pine habitats (Zeiner et al. 1990a). Preferred habitat is generally typified by short, sparse vegetation with few shrubs, level to gentle topography, and well-drained soils (Haug et al. 1993).

Burrowing owls most commonly live in burrows created by California ground squirrels. Burrowing owls may occur in human-altered landscapes such as agricultural areas, ruderal grassy fields, vacant lots, and pastures if the vegetation structure is suitable (i.e., open and sparse); useable burrows or shelter sites are available; and foraging habitat occurs in close proximity (Gervais et al. 2008). Debris piles, riprap, culverts, and pipes can be used for nesting and roosting.

Several suitable size burrows at least 4 inches in diameter were observed on the Project site. The focused surveys conducted in 2019 resulted in no observations of burrowing owl or any sign (e.g., whitewash, pellets, prey remains, feathers) of this species. However, the Project site does support limited potential nesting habitat and foraging habitat for this species. During the November 2020 site visit along the gen-tie alignment, a few small Botta's pocket gopher (*Thomomys bottae*) and old California ground squirrel burrows were observed along the roadside margins. No rodent activity was observed during the survey, and no observations of burrowing owl sign was made. It is possible that the gen-tie alignment may be used by burrowing owl from time to time for foraging, however nesting habitat is very marginal/limited based on the lack of suitable burrows and historic disturbance associated with cultivation along the alignment.

Loggerhead Shrike

The loggerhead shrike is a California SSC. This species is widespread throughout the United States, Mexico, and portions of Canada (Humple 2008). The species is a year-round resident in most of the United States, including from California east to Virginia and south to Florida, and in Mexico. In California, while shrikes are widespread at the lower elevations in the state, the largest breeding populations are located in portions of the Central Valley, the Coast Ranges, and the southeastern deserts (Humple 2008).

Preferred habitats for loggerhead shrikes are open areas that include scattered shrubs, trees, posts, fences, utility lines, or other structures that provide hunting perches with views of open ground, as well as nearby spiny vegetation or man-made structures (such as the top of chain-link fences or barbed wire) that provide a location to impale prey items for storage or manipulation (Humple 2008). Loggerhead shrikes occur most frequently in riparian areas along the woodland edge, grasslands with sufficient perch and butcher sites, scrublands, and open canopied woodlands, although they can be quite common in agricultural and grazing areas, and can sometimes be found in mowed roadsides, cemeteries, and golf courses. Loggerhead shrikes occur only rarely in heavily urbanized areas. For nesting, the height of shrubs and presence of canopy cover are most important (Yosef 1996). Loggerhead shrikes nest in trees, shrubs or thorny vegetation. In some cases, tumbleweeds or brush piles may also be used for nesting.

The Project site provides suitable foraging and nesting habitat for loggerhead shrikes. Loggerhead shrikes were observed on 10 occasions during the field surveys, during months typically associated with breeding (March and April). Although no nesting loggerhead shrikes were anecdotally observed, focused nest surveys for this species were not conducted and there is a high potential that the species could nest on site given the availability of suitable habitat and timing of observations. The gen-tie alignment contains suitable foraging habitat for loggerhead shrike, however nesting habitat is not available.

Mountain Plover

The mountain plover is a California SSC during its wintering period in California from September through March, when it can be found on short grasslands and plowed fields of the Central Valley from Sutter and Yuba Counties southward. Mountain plovers are also found in foothill valleys west of San Joaquin Valley, the Imperial Valley, plowed fields of Los Angeles and western San Bernardino Counties, and along the central Colorado River Valley. They are found in areas with little or no vegetation, including short grasslands, freshly plowed fields, newly sprouting grain fields, and sod farms.

Focused biological surveys were not conducted to detect mountain plovers, and no biological surveys were conducted during the winter season. Conditions vary from winter to winter in the agricultural lands and pastures where this species often is found. Therefore, occurrence may be sporadic. Mountain plovers may occur on the site on occasion during winter or migration, depending on crop rotation and other factors influencing habitat conditions. Extensive suitable habitat is likely available in the Project vicinity on surrounding agricultural lands. The nearest CNDDB occurrence was recorded in December 2001 and is located approximately 4.6 miles northeast of the Project site (CDFW 2020a).

Northern Harrier

The northern harrier is a California SSC when breeding. It breeds throughout most of Canada and Alaska; south through the northern and central Great Basin, Rocky Mountains, and Great Plains; in the northeastern United States; and in scattered locales from central, coastal, and southwestern California south to Baja California, Mexico

(Smith et al. 2011). Northern harriers winter across most of the coterminous United States south through Mexico, Central America, the Bahamas, and Cuba. In California, northern harriers breed in the Central Valley, Great Basin, most of the Coast Ranges, and in some coastal areas from San Luis Obispo County southward (Davis and Niemela 2008). The Central Valley supports the majority of nesting harriers in California, despite substantial habitat losses in that region.

Northern harriers breed up to about 2,600 feet amsl in the western Sierra Nevada foothills, where they favor open wetland, pasture, and grassland habitats, but also forage in open sagebrush (*Artemisia* spp.) flats (Beedy and Pandolfino 2013). Harriers nest on the ground in wet meadows, marshes, and grasslands, where at least moderately tall and dense vegetation provides sufficient cover to conceal their nests. Extensive grazing generally precludes nesting by northern harriers, which typically require relatively large tracts of undisturbed habitat dominated by thick, tall vegetation, most often in or near wet areas (Smith et al. 2011).

The CNDDB (CDFW 2020a) contains no harrier nest records within 5.0 miles of the Project site. In addition, the Project site does not contain suitable nesting habitat for this species. The gen-tie alignment contains suitable foraging habitat for northern harrier, however nesting habitat is not available. During supplemental Swainson's hawk surveys on April 12, 2020, one northern harrier was observed hunting near the southwestern boundary of the Project site (Figure 5).

Short-eared Owl

Short-eared owl, a bird of prey, is a California SSC for nesting occurrences only. It forages primarily near dawn and dusk in open habitats and generally nests and roosts in relatively tall herbaceous vegetation. The Project site contains marginally suitable ground nesting vegetation and herbaceous cover within the tamarisk thicket communities, but it is unlikely the species would use these areas for nesting given the levels of surrounding agricultural disturbance. The gen-tie alignment does not contain suitable ground nesting vegetation. No short-eared owls were observed during surveys in 2019 and 2020. However, this species might occasionally forage in the vegetation on site, if suitable nesting or winter roosting habitat is present nearby. Swainson's Hawk

The Swainson's hawk is state listed as a threatened species under CESA. It nests in California in the Central Valley, Klamath Basin, Northeastern Plateau, Lassen County, and the Mojave Desert. This species breeds in riparian areas, stands of trees in agricultural environments, oak savannah, and juniper-sage flats. In the San Joaquin Valley, it typically nests in riparian areas and in isolated tree clusters, often near rural residences or other areas with some human disturbance. Alfalfa fields are the favored foraging areas of Swainson's hawk in the Central Valley, but the species also forages in other low-density row crops, undisturbed grasslands, rangelands, and fallow agricultural fields.

Over the course of the protocol-level surveys conducted within the Project area as well as within a 1.0 mile and 5.0 mile buffer during the months of April, June, and July 2019, a total of eight Swainson's hawk nests were recorded and observed (Figure 5). One active nest within the Project Boundary (SWHA-05), was identified during April 2019 surveys but was subsequently determined to have failed based on an absence of nest activity during the June and July 2019 surveys. Two active nests within 1 mile of the Project Boundary (SWHA-02, and SWHA-06) were identified during April 2019 surveys but were subsequently determined to have failed, similar to SHWA-05. Within the 5.0-mile buffer, nests SWHA-03 and SWHA-07 were last observed to be active in July 2019, with juvenile Swainson's hawks or chicks active around the nests. SWHA-01, SWHA-04, and SWHA-08, all of which are located within the 5.0-mile buffer, were active early in the season (April 2019), at which time birds were observed nest building or copulating near the nests; however, no additional activity was observed during subsequent surveys.

During supplemental surveys conducted in April 2020, a pair of Swainson's hawks were observed displaying nesting behavior (nest building, copulating) associated with SWHA-05, which, as noted above, is within the project boundary, and was determined to have failed during 2019. A follow-up reconnaissance-level survey in July 2020 revealed that SWHA-05 had failed, as it did the previous year, based on the lack of nest activity on July 6 and July 7.

One additional nest (SWHA-09), was discovered during the April 2020 surveys. This nest was located in an isolated tree at the corner of South Ohio Avenue and West Dinuba Avenue, southeast of the PG&E Tranquillity Switching Station. As previously discussed in Section 4.2 (Field Surveys), the PG&E Tranquillity Switching Station was not included in focused biological field assessments. However, access roads adjacent to the Switching Station and nest tree location are within the 0.5-mile Swainson's hawk survey radius of the Project site and gen-tie alignment. A pair of adult Swainson's hawks were observed nest building and copulating at this location on April 17, 2020. The follow-up reconnaissance-level survey in July 2020 confirmed that SWHA-09 was successful, as a Swainson's hawk chick was observed in the nest on July 6 and July 7.

Tricolored Blackbird

Tricolored blackbird is listed as threatened under CESA and is also a SSC. The tricolored blackbird typically breeds near fresh water, preferably in emergent wetlands with tall, dense cattails or tules, but also in thickets of willow, blackberry, wild rose, and tall herbaceous vegetation, including some crops, such as triticale. These habitats do not occur on the Project site or within the gen-tie alignment; however, Fresno Slough and the Mendota Wildlife Area support suitable habitat, and this species could periodically use on-site agricultural fields as foraging habitat during the nesting season. It also potentially occurs on the site during winter. No tricolored blackbirds were observed during biological surveys in 2019 and 2020. The CNDDB includes an occurrence for this species at the Mendota Wildlife Area, approximately 3.5 miles east of the Project site.

5.2.2.2 Mammals

As noted in Table 4, three special-status mammal species (western mastiff bat, western red bat, American badger, and San Joaquin kit fox) were identified as having some potential to occur on the Project site. A discussion of each species and its potential for occurrence is provided below.

Western Mastiff Bat

Western mastiff bat is a California SSC. This species inhabits a wide variety of chaparral, coastal and desert scrub, grasslands, coniferous and deciduous forest and woodland habitats (Zeiner et al. 1990b). Western mastiff bat roosts in crevices in rocky canyons and cliffs where the canyon or cliff is vertical or nearly vertical, trees, and tunnels in San Joaquin Valley and Coastal Ranges from Monterrey County southward to southern California (Zeiner er al. 1990b).

No CNDDB occurrences for western mastiff bat have been recorded within 5.0 miles of the Project site (CDFW 2020a). The Project site, gen-tie alignment, and vicinity lacks suitable substrates for roosting, however this species may forage on rare occasion on the site from time to time.

Western Red Bat

Western red bat is a California SSC. This species occurs in the western United States, Mexico, Central Mexico, and possibly South America (Cryan 2003; Pierson et al. 2004). In California, most of the records are from the Central Valley, which is the breeding center for the western red bat in the state. However, western red bats also occur throughout low elevation areas of California. Although the species is generally considered a year-round resident, there

is evidence of seasonal movements in California, but little evidence for mass migrations characteristic of the eastern red bat (*Lasiurus borealis*) and other tree bats (Cryan 2003; Pierson et al. 2004). In the Central Valley, foraging western red bats are closely associated with well-developed riparian zones that provide suitable roosting sites (Pierson et al. 2004). However, western red bats have also been observed in orchard trees and other non-native trees.

No CNDDB occurrences for western red bat have been recorded within 5.0 miles of the Project site (CDFW 2020a). The tamarisk thickets on the Project site provide very limited/marginal roosting habitat for this species. In addition, nearby orchards may provide some potential for roosting western red bats; however, due to the regular maintenance and active management of these orchards, the potential for red bats to establish maternity roosts is low, although individuals may roost for short periods. The gen-tie alignment does not provide roosting habitat for this species.

American Badger

The American badger is a California SSC. American badgers are generally associated with dry, open, treeless regions, prairies and grasslands, low-intensity agriculture (e.g., pasture and dryland crops), drier open shrublands and forest, parklands, and cold desert areas (Long 1973; Zeiner et al. 1990b). During the multi-species burrow assessment conducted in 2019, burrows were evaluated for potential American badger use. No badgers were observed during the assessment or incidentally during other surveys on the site, and no burrows suitable for badger or sign of badger use (obvious claw marks on the inside edges, wide apron, and scat or tracks) were observed on the Project site during the surveys. Additionally, no badgers or burrows suitable for badger were observed within the gen-tie alignment during the November 2020 survey.

San Joaquin Kit Fox

The San Joaquin kit fox (kit fox) is a year-round resident of arid and semi-arid regions of the San Joaquin Valley and surrounding valleys, and lower elevations of the Sierra Nevada foothills and Coast Ranges from northern Santa Barbara and Ventura Counties, north to Contra Costa and San Joaquin Counties (USFWS 1998). The kit fox is the smallest canid species in North America (USFWS 2010).

Kit fox in the central portion of its range, which includes the Project site, mostly inhabit non-irrigated grasslands; however, they may also occur in scrub habitats (USFWS 1998). Kit fox may venture into agricultural lands, but cannot occupy farmland on a long-term basis (USFWS 2010). Where kit fox are found in annual grassland, they are generally associated with brome grasses (*Bromus* spp.), fescue (*Festuca* spp.), wild oats (*Avena fatua*), barley (*Hordeum* spp.), and filaree (*Erodium* spp.).

During the multi-species burrow assessment conducted in 2019, burrows were evaluated for potential kit fox use. However, as discussed above, none of the burrows showed any sign of kit fox use or presence (e.g., scat, prey remains, fresh digging, claw marks). Additionally, no kit fox or burrows suitable for kit fox were observed within the gen-tie alignment during the November 2020 survey. Given the relative scarcity of suitable prey on the managed agricultural fields, the disturbed nature of the site, and the lack of CNDDB records in the immediate site vicinity, the potential for kit fox to occur on the site is considered low. This species is only likely to occur during long-range dispersal movements when individuals may pass through the site between areas of higher quality habitat within the region.

The closest occurrence of the kit fox was recorded in 1997, approximately 5.7 miles southwest of the Project site. Although this species is known to occur in western Fresno County, the CNDDB query resulted in no records of San Joaquin kit fox occurrence within 5.0 miles of the Project site.

5.2.2.3 Invertebrates

As noted in in Table 4, three special-status invertebrate species, Crotch bumble bee (*Bombus crotchii*), longhorn fairy shrimp (*Branchinecta longiantenna*), and vernal pool fairy shrimp (*Branchinecta lynchi*), were evaluated for their potential to occur within the Project site. It was determined that all three species are not expected to occur due to the lack of suitable habitat, however, due to the potential presence of Crotch bumble bee in the region, this species is discussed in more detail below.

Crotch Bumble Bee

Crotch bumble bee is considered a candidate for listing as endangered under the CESA. The current range of the Crotch bumble bee is nearly limited to California and generally includes the majority of the state south of Sacramento (Xerces Society et. al. 2018).

Bumble bees have three basic habitat requirements: suitable nesting sites for colonies, availability of nectar and pollen from floral resources, and suitable overwintering sites for the queens. Crotch bumble bee inhabits open grassland and scrub habitats and primarily nests underground (Williams et al. 2014). Little is known about the nesting and overwintering sites for Crotch bumble bee, however similar species typically overwinter in soft, disturbed soil (Goulson 2010), or under leaf litter or other debris (Williams et al. 2014). Nests are often located underground in abandoned holes made by ground squirrels, mice, and rats, or occasionally abandoned bird nests.

Agricultural land uses and rapid urbanization in the Central Valley are threats that are thought to have impacted Crotch bumble bee (Hatfield et al. 2015). However, the species has been detected in agricultural landscapes in Yolo County and Contra Costa County in recent years (Hatfield et al. 2015). Bumble bees, generally, are threatened by pesticide use, pathogens, and competition with non-native bees (Hatfield et al. 2015).

Crotch bumble bee is not expected to occur on the Project site or gen-tie alignment. No CNDDB occurrences for Crotch bumble bee have been recorded within 5.0 miles of the Project site (CDFW 2020a). The clay loam soils and regular agricultural production activities, including ongoing disking/tilling ,as well as related disturbance and management actions, makes the site unsuitable for this species. The site supports very little standing vegetation and virtually no floral resources. Additionally, the surrounding land uses are primarily agricultural, and the nearest natural habitats are 3.1 miles to the northeast. Therefore, this species is not anticipated to be present based on the historic levels of disturbance on the Project site and in the region of the project site. In addition, the site lacks the necessary habitat elements to support this species.

5.3 Potentially Jurisdictional Aquatic Resources

The literature review completed for the Project, including a desktop review of USGS National Hydrography Dataset and USFWS National Wetlands Inventory datasets, as noted in Section 4.1, resulted in the identification of a number of aquatic features that may be subject to regulation by USACE, RWQCB, and/or CDFW. As previously discussed, Dudek completed a formal delineation of aquatic resources that assessed the entire Project site for the presence of hydrophytic vegetation, hydric soils, and wetland hydrology to confirm conditions on the Project site, as well as a reconnaissance-level survey of the gen-tie alignment in November 2020. The results of the aquatic resource delineation are summarized below.

Although several features were identified through a pre-field review of the National Hydrography Dataset and National Wetlands Inventory datasets, none of the National Hydrography Dataset or National Wetlands Inventory features were observed/located during the field survey, likely due to the extensive historic and ongoing surface manipulation associated with agricultural cultivation and associated management activities.

The field survey identified one constructed ditch in the central portion of the Project site (see Appendix C). This ditch is relatively uniform and extends eastward from the northeastern boundary of the existing Tranquillity solar facility (east of SR-33), into the Project site. The ditch continues approximately 2,800 feet to the east before turning abruptly north, extending approximately 2,650 feet, and again turning abruptly east and extending for approximately 250 feet before dissipating into an agricultural field. The ditch feature is located along road margins at the edge of existing agricultural fields, however, the ditch exhibits no signs of water flow, including any evidence of an ordinary high water mark (OHWM), defined bed and bank, scour, drift deposits, or water staining. Vegetation within the ditch is composed entirely of non-native upland annual grasses dominated by red brome (*Bromus madritensis*), and lacks species that have a wetland indicator status (Lichvar et al. 2016). The results of the field survey indicate that the ditch was excavated in uplands, and based on the lack of hydrophytic vegetation, evidence of hydrology, and any traceable surface connection to downstream waters or other waterbodies, this ditch is not considered a jurisdictional feature that would be regulated by the USACE, RWQCB, or CDFW. No other potentially jurisdictional features were identified on the Project site or within the gen-tie alignment.

INTENTIONALLY LEFT BLANK

6 Impacts Analysis

This section addresses the potential direct, indirect, and cumulative impacts on biological resources that would result from implementation of the proposed Project. For purposes of this report, impacts are defined, identified, and analyzed pursuant to the California Environmental Quality Act. As such, the significance of each potential impact is determined and measures to avoid, minimize, and/or mitigate any impacts determined to be significant are also identified.

6.1 Definitions of Impacts

The types of impacts that would occur as a result of implementation of the proposed Project include direct permanent impacts, direct temporary impacts, indirect impacts, and cumulative impacts. Each of these impact types is defined below.

Direct Permanent Impacts

These impacts typically refer to the permanent physical loss of a biological resource due to ground disturbance activities associated with implementation of a proposed project. Direct permanent impacts can include the following (1) permanent loss of vegetation communities and land covers that can serve has habitat for special-status plant and wildlife species; (2) injury or mortality to individuals of special-status plant and wildlife species; (3) permanent loss of sensitive habitat; and (4) permanent loss of areas that facilitate wildlife movement and habitat connectivity.

With respect to the proposed Project, permanent direct impacts would generally be associated with construction of structures such as solar panels, tracking/support structures, inverters, and interconnection facilities (Figure 6).

Direct Temporary Impacts

Temporary direct impacts consist of ground disturbance associated with construction activities that would not result in a permanent structure and that would be restored to substantially similar conditions after construction is complete. Temporary impacts may result from equipment staging, equipment turnaround areas, and construction access. Additionally, temporary direct impacts can occur from removal or trampling of vegetation outside designated work zones in the absence of avoidance and minimization measures.

With respect to the proposed Project, there are no temporary direct impacts as a result of construction of the Project as no restoration would be completed for temporarily disturbed areas since all areas temporarily disturbed are agricultural lands. Temporary impacts are not discussed further in this report.

Indirect Impacts

Indirect impacts are reasonably foreseeable effects to biological resources that could be caused by the Project on adjacent or remaining biological resources either during construction or operation. Indirect impacts may be short-term construction-related impacts, such as those due to noise and dust, or long-term impacts, such as degradation of habitat or impacts from activities during operations and maintenance. Indirect impacts associated with the proposed Project can include the following:

- **Generation of fugitive dust.** Dust can impact vegetation and agricultural lands surrounding the Project site, resulting in changes in the community structure and function. These changes could result in impacts to special-status wildlife species foraging or nesting on site or in adjacent areas.

- **Noise.** Construction-related and operational noise can result in altered foraging and nesting behavior of avian species, displacement of animals from burrows and shelter, damaged hearing from extremely loud noises, and increased vulnerability to predators (Lovich and Ennen 2011).
- **Chemical pollutants.** Accidental spills of hazardous chemicals could contaminate surface and sub-surface waters, and impact wildlife species through direct or secondary poisoning.
- **Increased human activity.** The increase in human activity during construction or during activities associated with operations and maintenance can deter wildlife from using habitat areas near or adjacent to the activity areas, thus altering the foraging and movement behavior of some wildlife species.
- **Trash and garbage.** Trash and garbage from site activities could attract species more tolerant of human-occupied areas such as ravens, crows, opossums, skunks, and raccoons that could predate on eggs and chicks of special-status bird species, occupy dens/burrows, and increase competition for available resources. In addition, trash and garbage may attract certain special-status species to the Project site, such as the San Joaquin kit fox.

With respect to the proposed Project, indirect impacts were considered to potentially occur to resources within 500 feet of the construction limits of the Project. All special-status wildlife species observed or with a low to high potential to occur on site could be potentially affected by these indirect impacts.

Cumulative Impacts

Cumulative impacts refer to the combined environmental effects of the Project along with other relevant projects that have been recently completed, are currently under construction, or are proposed for development in the foreseeable future. In some cases, the impact from a single project may not be substantial, but when combined with other projects, the cumulative impact may be substantial and potentially significant under CEQA.

6.2 Thresholds of Significance

The following thresholds for assessing the significance of impacts on biological resources are based on Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.), Pursuant to these guidelines, a project could potentially have a significant effect on biological resources if the project would result in any of the following conditions:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as being a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service.
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service.
- Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrologic interruption, or other means.
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impedes the use of native wildlife nursery sites.
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

The significance of impacts to biological resources are typically assessed by comparing the potential changes resulting from a proposed project to the significance thresholds defined above. However, CEQA Guidelines, Section 15064(b), states that an ironclad definition of "significant" effect is not possible because the significance of an activity may vary with the setting. As such, an evaluation of whether or not an effect on biological resources would be "substantial", and therefore a potentially significant impact, with respect to the significance thresholds identified above generally considers the following:

- amount and/or extent of the resource (numbers, acres, etc.) to be affected;
- the relative biological value (rarity, functions and values) and/or sensitivity status of the resource and its relevance within a specified geographical area;
- the type and severity of impact, (i.e., would the project adversely affect wildlife through mortality, injury, displacement, or habitat loss or adversely impact vegetation through destruction of a sensitive plant population?);
- timing of the impact, (i.e., would the impact occur at a critical time in the life cycle of a special-status plant or animal, such as breeding, nesting, or flowering periods?);
- duration of the impact, (i.e, whether the impact is temporary or permanent); and
- project design attributes or other Applicant proposed measures included as part of the overall proposed Project that would avoid or minimize potential impacts on biological resources.

6.3 Impacts and Mitigation Measures

The analysis of impacts discussed below addresses the potential impacts on biological resources associated with implementation of the proposed project in association with each of the significance thresholds listed above. The analysis focuses on direct and indirect impacts on these resources; cumulative impacts are discussed separately at the end of the impact analysis section. If identified impacts are considered potentially significant pursuant to CEQA, measures to avoid, minimize, and/or mitigate these impacts are then listed after each impact discussion.

6.3.1. Special-Status Plant and Wildlife Species

Impact BIO-1. Implementation of the proposed Project may have a substantial adverse effect, either directly or through habitat modifications, on species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. This would be considered a potentially significant impact.

Special-Status Plant Species

As discussed in Section 5.2.1 above, no special-status plant species are known to occur or have potential to occur on the Project site or gen-tie alignment as the site lacks habitat for those special-status plant species known to occur in the region, and due to the extent of intensive and ongoing disturbance from agricultural production and management activities. Therefore, there is no potential for direct and indirect impacts to special-status plant species within the Project site. As such, special-status plant species are not discussed any further in this report.

Special-Status Wildlife Species

The Project is expected to have negligible impacts to special-status wildlife species known to occur in the region because development would occur on disturbed lands associated with active agricultural activities that provide little nesting/breeding habitat for these species. In addition, because adjacent lands are also disturbed and heavily managed for agricultural production purposes, relatively few special-status wildlife species occur in these areas

that would be affected by the Project. In addition, operations and maintenance activities would be only periodic (i.e., panel washing and as-needed equipment repairs) and would not involve new ground disturbance.

Special-status wildlife species that have potential to occur on the Project site and gen-tie alignment are discussed in Section 5.2.2 above. Special-status species that were determined to have low potential to occur on the Project site (Table 4), but could potentially pass through (and/or fly over the site) on rare occasion such as American badger, short-eared owl, western mastiff bat, and crotch bumble bee, are not further discussed in this section. These species are eliminated from further consideration and discussion herein due to the lack of high-quality available habitat on the Project site and gen-tie alignment, and level of agricultural-related disturbance that occurs on the Project site on a regular basis.

Potential direct impacts on the special-status species determined to occur can include injury or harm to any individual animals (including young and/or eggs for avian species) that may be within an area proposed for ground disturbance. Potential indirect impacts to special-status wildlife include fugitive dust, chemical pollutants, noise, increased human activity, and the presence of trash and garbage which could attract predators of some of these species. Potential impacts on each of the special-status wildlife species with some potential to occur on the Project site are discussed below.

San Joaquin Kit Fox

As discussed in Section 5.2.2.4 above, no suitable burrows for this species were observed during the multi-species burrow assessment conducted on the Project site or within the gen-tie alignment. In addition, no individual San Joaquin kit fox or its sign (e.g., tracks, scat, or prey remains) were documented on the Project site or within the gen-tie alignment. The nearest CNDDB occurrence is from 1997, approximately 5.7 miles southwest of the Project site. Although this species is known to occur in western Fresno County, the CNDDB query resulted in no records of San Joaquin kit fox occurrence within 5.0 miles of the Project site. As noted in Section 5.2.2.4, because of the relative scarcity of suitable prey on the managed agricultural fields, the disturbed nature of the site, and the lack of historical observations in the immediate site vicinity, the potential for San Joaquin kit fox to occur on the site is considered low. This species is only expected to occur during long-range dispersal movements when individuals may pass through the site between areas of higher quality habitat within the region. While it is not possible to conclude that San Joaquin kit fox would never visit the site, the species is unlikely to occur there on a regular basis. However, to ensure impacts to San Joaquin kit fox would be completely avoided, pre-construction surveys and avoidance measures as described in MM-BIO-1.3 and MM-BIO-1.4 would be implemented. Therefore, impacts to San Joaquin kit fox would be considered **less-than-significant with mitigation incorporated**.

Additionally, because there is some potential, albeit small, for individuals of this species to pass through the Project site during construction activities, indirect impacts can include being attracted to construction sites as a result of food items and other trash being left behind. Individual animals will often use pipes on construction sites for temporary shelter which, if later moved while the animal is still inside, can cause injury to the animal. Uncovered holes or deep trenches can also serve to entrap animals that may inadvertently fall into one of these areas. Other project-related activities that can indirectly affect animals passing through the site during project construction or operation include the use of rodenticides during operation of the solar facility which can result in secondary poisoning to individual San Joaquin kit foxes should any be moving through the Project site during a time when rodent control is being implemented. However, such impacts would be mitigated with the implementation of MM-BIO-1.2 (Item 4), therefore these indirect impacts are considered **less-than-significant with mitigation incorporated.**

Burrowing Owl

As noted in Section 5.2.2.1, suitable size burrows of at least 4 inches in diameter were observed along the edges in areas of inactive agricultural activities on the Project site. Although focused surveys resulted in no observations of burrowing owl or any sign (e.g., whitewash, pellets, prey remains, feathers) of this species, the Project site does support limited potential nest burrow habitat and foraging habitat for this species which often nests along the periphery of agricultural fields. Because of the abundance of suitable nesting and foraging habitat in the site vicinity, and because no burrowing owls currently occupy the site, the loss of burrowing owl habitat from the Project would be less than significant. However, in the unlikely event that burrowing owls are present on the Project site at the time of construction, ground-disturbing activities could result in mortality to owls through entombment in burrows or could result in abandonment of nests and destruction of eggs, nests, or nestlings. Construction noise and increased levels of human activity could also result in abandonment of active burrows. The potential loss of individual burrowing owls and/or active nests would be a potentially significant impact on a special-status species and also a violation of state law (California Fish and Game Code Sections 3503 and 3503.5) protecting active bird nests. However, implementation of MM-BIO-1.5 would reduce this impact to a **less-than-significant level.**

Indirect impacts that could adversely affect burrowing owls foraging on the site during project operation include the use of rodenticides to control rodent populations which can result in secondary poisoning to individual burrowing owls should any be moving through the Project site during a time when rodent control is being implemented. The potential for burrowing owls to be poisoned by the use of rodenticides is considered a **potentially significant impact,** however, this impact would be reduced to a **less-than-significant level** with the implementation of Mitigation measure BIO-1.4 (Item 4) below.

Swainson's Hawk

The Project site provides suitable nesting and foraging habitat for Swainson's hawk. In 2019, one pair of Swainson's hawks were observed nesting within the Project site in April, but ultimately the nest failed and became inactive. Surveys conducted in 2019 per CDFW-endorsed survey protocols resulted in no observations of successful Swainson's hawk nesting on the site or within a 1-mile survey buffer of the site; however, two successful Swainson's hawk nests were observed within a 5-mile buffer of the site. During reconnaissance-level surveys in 2020, one pair of Swainson's hawks was observed nesting within and along the northwestern boundary of the Project site in April (see Figure 5), which ultimately was not successful. Another pair was observed nesting west of the gen-tie alignment, southwest of the PG&E Tranquillity Switching Station, and successfully produced at least one chick. None of the trees in which these nests were observed will be removed as a result of Project implementation. However, if construction activities occurred during the nesting season of this species (generally March 1 through August 15), noise and human activity associated with construction, particularly within 200 yards of an active nest (SHTAC 2000), can alter nesting and foraging behaviors of adult birds nesting on or in the site vicinity such that eggs and young can be left alone for long periods of time, or even abandoned, resulting in harm or mortality to eggs and young. The potential loss of individual Swainson's hawk and/or active nests would be a **potentially significant impact** as well as a potential "take" pursuant to the California Endangered Species Act. However, implementation of MM-BIO-1.6 would ensure impacts to nesting Swainson's hawk would be avoided and reduce this impact to a **less-than-significant level.**

The 1,700 acres of fallow agricultural land that would be removed by the Project would constitute a loss of foraging habitat assumed to be used by the pair of Swainson's hawks nesting along the northwest boundary of the Project site, and potentially by other Swainson's hawk pairs in the vicinity of the Project site (see Figure 5). The loss of

foraging habitat in close proximity to active nests can sometimes result in a reduction in nest productivity and even the loss of hawk territories. However, Swainson's hawks typically forage extensive distances from active nests, typically 10 miles or more (Estep 1989; Estep and Dinsdale, 2012), and will utilize a vast landscape of suitable habitat within which to forage. More importantly, a substantial amount of agricultural land (typically the preferred foraging habitat for this species in the Central Valley) occurs in the general region in which the Project is located. The 1,700 acres of fallow agricultural land that would be removed by the Project would constitute a loss of approximately 0.8% of the total available suitable foraging habitat within 10 miles of the Project site. As such, a substantial amount of suitable foraging habitat will still be available for use by the pair of Swainson's hawks currently nesting on the Project site and by other pairs in the vicinity.

In addition, and as noted in Estep and Dinsdale (2012), despite the large amount of acreage of foraging habitat available to Swainson's hawks west of Fresno Slough (where the Project is located), the density of Swainson's hawk nesting in this area is much lower compared to portions of the County east of Fresno Slough. Estep and Dinsdale (2012) noted "that the lack of nesting habitat may be the primary factor limiting population size in that area." If Estep and Dinsdale (2012) are correct, then the loss of 1,700 acres of potential foraging habitat should not result in any reduction of Swainson's hawk nesting near the Project site because limited opportunities for nesting likely limits the number of Swainson's hawk pairs in the area, despite the abundance of suitable foraging habitat in the region.

Furthermore, a recent study in Sacramento County regarding the use solar array fields as foraging habitat by raptors concluded that Swainson's hawks and several other raptor species will forage within solar array fields (Estep 2013). The study found that solar array fields that incorporate a grassland substrate to promote rodent populations provides, unlike most crop types, a consistent and available source of prey throughout the spring and summer breeding season, particularly for Swainson's hawks. Of note, the pair of Swainson's hawks (SWHA-09, located near a proposed gen-tie location; Figure 5) that produced at least one chick in 2020 is located immediately adjacent to extensive solar arrays expanding to the northeast, east, south, and southwest of the nest site.

Because of the substantial amount of suitable foraging habitat in the region that is available for use by the pair of Swainson's hawks currently nesting on the Project site and by other pairs in the vicinity of the Project site, the relatively small percentage of foraging habitat that will be impacted by the Project will not appreciably reduce the overall amount of foraging habitat available. Additionally, areas between and adjacent to the completed solar arrays are expected to still be suitable as foraging habitat for Swainson's hawks following project implementation. For these reasons, the loss of foraging habitat associated with implementation of the proposed Project would be **less-than-significant**.

Operational activities would result in only low noise levels in surrounding areas. As noted in the Noise Technical Report for the Project (Dudek 2020), noise levels would reach only 38 A-weighted decibels (dBA) at the nearest residences. Table 2 of the Noise Technical Report describes this sound level as the equivalent of "quiet urban, nighttime" sound levels (Dudek 2020). In addition, this level roughly approximates or is lower than the ambient noise levels measured in the site vicinity (Dudek 2020). As previously discussed in Section 5.2.2.1, an active Swainson's hawk nest (SWHA-09) was discovered immediately adjacent to a solar PV array in April 2020. This nest was subsequently determined to have hatchling success as a juvenile Swainson's hawk was observed in the nest. This discovery further supports the argument that operational activities of solar PV arrays result in low levels of noise and disturbance to nesting Swainson's hawks. Therefore, because of the infrequent and low levels of disturbances, which would at best approximate existing disturbances, impacts to Swainson's hawk from maintenance and operations would be **less-than-significant**.

Another operational indirect impact includes the potential for electrocution with the gen-tie line once it is operational. Electrocution can occur when a bird simultaneously contacts two energized phase conductors (or wires) or simultaneously contacts an energized wire and a grounded wire. This typically occurs when the wingspan of the bird is greater than the spacing between any two energized wires or cables or when a bird bridges the gap between an electric cable and a ground wire, typically when landing, or taking off from a power pole and thus completing the electrical circuit. Injury or mortality of individuals to this species as a result of electrocution would be considered **a less-than-significant impact with mitigation incorporated**. Mitigation measure BIO-1.6 (APLIC measure) below, will reduce this impact to a **less-than-significant level**.

The use of rodenticides as part of a rodent-control program at the operational solar facility can result in secondary poisoning to individual Swainson's hawks and can also minimize the potential for this species to use the solar array as foraging habitat once it is operational. The potential for Swainson's hawks to be poisoned by the use of rodenticides is considered a **less-than-significant impact with mitigation incorporated**. Mitigation measure BIO 1.4 (Item 4) below, will function to reduce impacts on Swainson's hawks from rodenticides to a **less –than- significant level**.

Mountain Plover

Biological surveys were not conducted to detect mountain plovers as this species would only occur during the winter months. Conditions vary from winter to winter in the agricultural lands and pastures where this species is often found. Therefore, occurrence may be sporadic, and mountain plovers may occur on the site on occasion during winter or migration, depending on crop rotation and other factors influencing habitat conditions. Cultivated or tilled lands, such as occur on the Project site, are apparently less favored compared to fallow land, burned fields, and heavily grazed grasslands (Hunting and Edson 2008). The nearest CNDDB occurrence of mountain plover was recorded in December 2001 approximately 4.6 miles northeast of the Project site (CDFW 2020a). However, the species occurs rarely in the region and currently occupies only a small percentage of suitable wintering habitat. In addition, as noted previously, habitat currently occurring on the Project site is less favored than other habitat types. Also, as this species only winters in the region, only highly mobile adults or fully fledged subadults have the potential to occur. In the unlikely event that mountain plovers are present at the time of construction, such individuals would easily be able to avoid construction equipment and escape injury or mortality. Therefore, the loss of 1,700 acres of marginally suitable mountain plover winter habitat that represents only a fraction of the habitat that is available in the region would be a **less-than-significant impact**.

Loggerhead Shrike

Focused surveys were not conducted to detect loggerhead shrike, however the Project site does provide suitable foraging and nesting habitat for this species. As previously described in Section 5.2.2.1 above, loggerhead shrike was observed on 10 occasions during the field surveys, during months typically associated with breeding (March and April). Given the availability of suitable habitat and timing of observations on the Project site, there is high potential that this species could nest on site and in the vicinity. Ground-disturbance activities, noise, and the increase in human activity associated with Project construction could result in loggerhead shrike nest abandonment which can result in the mortality of eggs or young if such activities occur during the nesting season (March – July). Measure MM-BIO-1.8 is included below, the implementation of which will ensure that active nests will not be disturbed or destroyed and impacts to loggerhead shrike are avoided. Therefore, Project impacts to loggerhead shrikes would be **less-than-significant with mitigation incorporated**.

Northern Harrier

Biological surveys were not conducted to detect northern harrier as the species is not expected to nest on the Project site due to the poor quality of the site as nesting habitat. However, suitable foraging habitat is present on the site, and the species was observed hunting near the southwestern boundary of the Project site on April 12, 2020. The CNDDB (CDFW 2020a) contains no harrier nest records within 5.0 miles of the Project site. Since abundant suitable foraging habitat remains in the region, and because this species is still expected to utilize the interstitial areas between the solar arrays after installation as foraging habitat, the loss of foraging habitat due to implementation of the proposed Project would be a **less-than-significant impact**.

Tricolored Blackbird

Biological surveys were not conducted to detect tricolored blackbird as the species is not expected to nest on the Project site due to the lack of suitable nesting habitat present on the Project site for this species. However, the Project site does provide some suitable foraging habitat (agricultural fields), and the species is known to nest approximately 3.5 miles northeast of the Project site in the Mendota Wildlife Area (CDFW 2020a). Since abundant suitable foraging habitat remains in the region, the loss of foraging habitat due to implementation of the proposed Project would be a **less-than-significant impact.**

Nesting Birds

The Project site contains some trees and shrubs which several avian species may use for nesting. Also, several ground-nesting species such as horned larks and western meadowlarks, have the potential to nest in fallow or even recently disked fields. In addition, suitable nesting trees adjacent to the Project site potentially be used by nesting birds. Ground-disturbance activities, noise, and the increase in human activity associated with Project construction could result in nest abandonment which can result in the mortality of eggs or young if such activities occur during the nesting season (March – July) of most common bird species in the region. In California, active bird nests (with eggs or young) are protected by provisions in the California Fish and Game Code (Section 3503) so any loss of active nests due to Project construction would be considered a violation of this regulation. Measures are included further below, the implementation of which will ensure that active nests will not be disturbed or destroyed and impacts to nesting birds are avoided. Therefore, Project impacts to nesting birds would be **less-than-significant with mitigation incorporated**.

Western Red Bat

Direct impacts to this bat species associated with construction include the loss of foraging habitat associated with conversion of the site to solar use. However, because insect prey are still likely to occur in association with the completed project and bats are still likely to forage over the Project, and because a substantial amount of foraging habitat will remain in the site vicinity, the loss of this habitat for foraging purposes is considered **less than significant**.

While the tamarisk trees on site are not expected to be removed, this species could potentially use these trees for day roosting or potentially for maternity roosts. Indirect impacts, including construction noise and human disturbance, can adversely affect daytime and/or maternal roost sites that occur in these trees and potentially result in abandonment of maternity roosts and daytime roosts exposing the bats to diurnal predators. Construction noise and human disturbance that could adversely affect roosting bats or maternal roosts is considered a potentially significant impact. However, incorporation of MM-BIO-1.9 below, would reduce this impact to a **less-than-significant level.**

Mitigation Measures

Measures to mitigate potentially significant impacts on special-status plant and wildlife species, known to occur or potentially occurring on the Project site, are described below.

General Measures

MM-BIO-1.1. **Biological awareness training.** Prior to the initiation of ground-disturbance or other construction activities associated with the Project, a qualified biologist shall conduct an on-site biological awareness training session with construction personnel to inform them of the special-status resources occurring or potentially occurring on the Project site. As new construction personnel join the construction crews throughout the Project construction phase, additional biological awareness training sessions may be conducted in-person by the biologist. Alternatively, the training program may also be recorded and subsequently shown to any construction personnel who are not able to attend the biologist-led training sessions. The training sessions shall include, at a minimum, the following:

1. A discussion of the special-status species and resources potentially occurring within and adjacent to ground-disturbance areas;
2. Dissemination of short handouts (including photos/depictions as appropriate) describing these species and resources, including protective status and penalties for violation of state and/or federal laws and regulations protecting certain species;
3. Avoidance measures being implemented on the Project site to avoid/minimize potential impacts to various species and biological resources.
4. Steps to take should such special-status plant or wildlife species be observed by on-site construction personnel and contact information for communicating sightings or issues.

The Project applicant shall ensure that the construction contractor and all construction personnel adhere to the applicable biological mitigation requirements and actions that are presented at the biological awareness training session to avoid adverse impacts to biological resources, and are made aware of penalties/consequences of noncompliance with these requirements. All attendees shall fill out a sign-in sheet that shall include text acknowledging the importance of avoiding impacts, potential penalties for violation of state and/or federal laws protecting certain species, and that by signing the sheet each attendee agrees to comply with the impact avoidance measures presented.

MM-BIO-1.2. **Best Management Practices and Measures.** The following best management practices and measures shall be implemented to minimize impacts to special-status species:

1. In order to minimize construction impacts on sensitive or protected biological resources, sensitive areas (e.g., active bird nests) known to occur on the site shall be flagged/fenced by a qualified biologist and all construction activities, including equipment staging and maintenance, shall be conducted outside the flagged area until the biologist has removed the flagging/fencing. Such areas shall also be monitored by the biologist during construction activities within the immediate vicinity of the flagged area.
5. If soil-binding and weighting agents are used on unpaved surfaces, they shall be non-toxic to wildlife and plants.

6. All vehicles and equipment shall be maintained in proper condition to minimize the potential for fugitive emissions or spills of motor oil, antifreeze, hydraulic fluid, grease, or other hazardous materials. Hazardous spills shall be immediately cleaned up and the contaminated soil shall be properly handled or disposed of at a licensed facility.
7. Prior to the use of rodenticides as part of any rodent control program during construction and/or operations, a Rodent Control Plan will be developed by the solar facility operator in coordination with a biologist familiar with the special-status species (e.g., San Joaquin kit fox, Swainson's hawk) that occur in the area and that could be adversely affected by the use of rodenticides. The plan will include the goals and objectives of rodent control, including that rodent control will only be implemented in focused locations where rodent populations have been determined to have exceeded acceptable levels; the types of rodent control methods to be used; and pre-use coordination with the Fresno County agricultural commissioner for recommendations and approval of select rodenticides. The plan will stipulate that planned rodent control programs would be implemented only after coordination between the solar facility operator and the qualified biologist to ensure that non-target species are not impacted. For any rodenticide approved for rodent control, the product label will be thoroughly examined prior to application to indicate if any restrictions exist for application of the product within the range of the San Joaquin Kit Fox and other endangered and protected animals.
8. Once the Project has become operational, the remaining habitat areas between solar arrays and associated infrastructure shall be maintained as foraging habitat for Swainson's hawk, burrowing owl, northern harrier, and other raptor species. The planting and maintenance program shall be developed in consultation with a qualified biologist with expertise in Swainson's hawk ecology and other raptor species likely to use the site as foraging habitat.

San Joaquin Kit Fox

Potentially significant direct impacts to the San Joaquin kit fox associated with the proposed Project would be mitigated through the application of mitigation measures MM-BIO-1.3 and MM-BIO-1.4 below.

MM-BIO-1.3. **Pre-construction burrow surveys and avoidance.** While no burrows or dens suitable for San Joaquin kit fox were observed during surveys conducted on the site in 2019 and the potential for kit fox to den on the site was considered low, the potential for suitable burrows to occur on the site between the time of the 2019 survey and Project construction cannot be entirely ruled out. As such, a preconstruction habitat assessment and burrow survey for San Joaquin kit fox shall be conducted by a qualified biologist no less than 14 days and no more than 30 days prior to any ground-disturbance activities as specified in the *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox Prior to or During Ground Disturbance* (USFWS 2011). Surveys will be conducted in all areas of proposed ground disturbance and within 200 feet of ground disturbance where legal access is available. Surveys will search for burrows/dens to ensure that San Joaquin kit fox are not present. If it is determined that the site is unsuitable for denning because of recent tilling or other intensive agricultural activity, then no survey needs to be conducted.

If a potential den is located, the den shall be flagged and the biologist shall determine the status of the den pursuant to USFWS protocols and definitions for San Joaquin kit fox (USFWS 1999) and appropriate avoidance measures taken pursuant to USFWS protocols (USFWS 2011). For dens determined to be "known" or "natal" dens (as defined by USFWS 1999), construction exclusion zones shall be established around burrows/dens potentially used by kit foxes pursuant to the

exclusion zone design and setback distances defined in USFWS 2011. The exclusion zones shall be maintained until all construction related disturbances have been terminated or the den is determined to be inactive by the qualified biologist, whichever comes first. If no San Joaquin kit fox activity is detected, work shall continue as planned.

MM-BIO-1.4. Construction impact avoidance. To avoid the potential for injury or harm to individual San Joaquin kit fox that may be moving through the site or immediate vicinity during dispersal movements, the following precautionary measures, based on recommendations described in the Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox Prior to or During Ground Disturbance developed by the USFWS (2011), shall be implemented:

1. Project-related vehicles shall observe a 20-mile-per-hour speed limit in all Project areas, except on Fresno County (County) roads and state and federal highways; this is particularly important at night when San Joaquin kit foxes are most active. Off-road traffic outside of designated Project areas shall be prohibited.
2. All construction pipes, culverts, or similar structures with a diameter of 4 inches or greater that are stored at a construction site for one or more overnight periods should be thoroughly inspected for San Joaquin kit fox before the pipe is subsequently buried, capped, or otherwise used or moved in any way. If a San Joaquin kit fox is discovered inside a pipe, that section of pipe shall not be moved until the USFWS has been consulted or the individual kit fox has left the site. If necessary, and under the direct supervision of the biologist, the pipe may be moved once to remove it from the path of construction activity, until the San Joaquin kit fox has escaped.
3. All food-related trash items such as wrappers, cans, bottles, and food scraps shall be disposed of in closed containers and removed regularly from the construction or Project site.
4. Use of rodenticides for any rodent control program to be implemented during Project construction and/or operation shall be restricted and adhere to the restrictions outlined in MM-BIO-1.2 above.
5. During construction, escape ramps shall be provided for all open trenches or ditches deeper than 2 feet to allow animals which have inadvertently fallen into the trenches to escape.
6. During the site disturbance and/or construction phase, grading and construction activities after dusk should be prohibited unless coordinated through the County, during which additional San Joaquin kit fox mitigation measures may be required.
7. The USFWS and CDFW shall be notified in writing within 3 working days of the accidental death or injury to a San Joaquin kit fox during project-related activities. Notification must include the date, time, and location of the incident or of the finding of a dead or injured animal and any other pertinent information.

Burrowing Owl

MM-BIO-1.5. Pre-construction nest surveys. Although no burrowing owls were observed utilizing the site during focused surveys conducted in 2019, the potential for the species to occur on the site between the time of the 2019 survey and Project construction cannot be entirely ruled out. The following measures will ensure that no adverse impacts to burrowing owl would occur:

1. Within 10 days of any construction-related ground-disturbance activities to be conducted on the Project site, a qualified biologist shall conduct surveys to determine if burrowing owl are utilizing

any suitable burrows on the site. The surveys shall be conducted pursuant to CDFW protocols (CDFW 2012). If the site has been recently tilled, the qualified biologist shall determine which portions of the site, if any, should be surveyed.

2. If burrowing owls are observed using burrows as nest sites within the burrowing owl breeding season (February 1 through July 31), a suitable avoidance buffer from the active burrow shall be determined by the qualified biologist. The avoidance buffer distance shall consider such factors as the intensity and extent of the disturbance, timing relative to the nesting cycle, and anticipated ground disturbance schedule. Limits of construction to avoid active burrows shall be established in the field with flagging, fencing, or other appropriate barriers and shall be maintained until the chicks have fledged and the nests are no longer active, as determined by the qualified biologist.
3. If burrowing owls are observed using burrows during the non-breeding season (August 1 through January 31), occupied burrows should be left undisturbed, and no construction activity should take place within 200 feet of the burrow where feasible. If disturbance of burrowing owls and burrows is unavoidable, burrowing owls should be excluded from all active burrows through the use of exclusion devices placed in occupied burrows in accordance with CDFW protocols (Staff Report on Burrowing Owl Mitigation [CDFG 1995, 2012]). Specifically, exclusion devices, using one-way doors, should be installed in the entrance of all active burrows. The devices should be left in the burrows for at least 48 hours to ensure that all burrowing owls have been excluded from the burrows. Each of the burrows should then be excavated by hand and refilled to prevent reoccupation. Exclusion should continue until the burrowing owls have been successfully excluded from the disturbance area, as determined by a qualified biologist.

Swainson's Hawk

MM-BIO-1.6. **Pre-construction nest surveys.** To avoid any adverse impacts to nesting Swainson's hawks on the Project site or in the immediate vicinity of the site, the following measures shall be implemented. Should construction be scheduled during the Swainson's hawk nesting season (generally March 1 through August 15), pre-construction Swainson's hawk surveys shall be conducted by a qualified biologist in accordance with the CDFW-endorsed protocol for the Central Valley (Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley [SHTAC 2000]). Pursuant to these protocols, the surveys shall be conducted in areas with suitable nesting trees within 0.5 mile of the Project site. If no active nests are identified, no further mitigation would be required.

1. If the nest observed on the western boundary of the Project site is determined to be active, or if any active nest is found during the pre-construction survey, an avoidance buffer of 0.25 mile shall be established around the nest tree. No project-related construction or ground-disturbance activities shall be allowed within the buffer until, as determined by the qualified biologist, all young have fledged and are no longer reliant on the nest. The 0.25 mile buffer discussed within this mitigation measure is consistent with the management recommendations as outlined in the *Staff Report regarding Mitigation for Impacts to Swainson's Hawks in the Central Valley* (CDFW 1994). The management recommendations describe a 0.25 mile buffer distance for "intensive new disturbances," such as ground-disturbance, heavy equipment operation, and general construction activities, and recommends an increase of the 0.25 mile buffer to 0.5 mile in areas which are away from

urban development and do not normally have construction or heavy equipment disturbances (CDFW 1994). Because the Project site and areas in the vicinity are subject to ongoing agricultural activities and associated disturbance (e.g., disking, tilling, and plowing of fields using heavy equipment) the 0.25 mile buffer distance is considered sufficient for the protection of nesting Swainson's hawks.

9. If a 0.25 mile avoidance buffer around an active nest is not feasible to maintain in order to reasonably accommodate ground-disturbance or other activities associated with Project construction, a suitable reduced avoidance buffer from the active nest shall be established as determined by the qualified biologist in coordination with CDFW and in consideration of the active nest risk factors presented in SHTAC 2000. The avoidance buffer distance shall consider such factors as the type, intensity and extent of the disturbance, timing of the disturbance relative to the nesting cycle, level of existing human activity and disturbance, line of sight from the nest to the disturbance/Project site, and anticipated construction schedule. Limits of construction to avoid active nests shall be established in the field with flagging, fencing, or other appropriate barriers. Active nests with reduced avoidance buffers shall be monitored and documented by the biologist to determine if any change in nesting, brooding, or feeding behavior is occurring that could be attributed to Project construction activities. If such behavioral changes are noted and there is any indication of stress or agitation exhibited by the breeding adult hawks, the biologist shall coordinate with the construction supervisor to take appropriate actions to reduce the impact to a level where the birds are observed to be behaving normally. The limits of construction shall be maintained, and nest monitoring and documentation continued, until the young have fledged and are no longer reliant on the nest as determined by the qualified biologist.

MM-BIO-1.6. **APLIC measures.** To avoid the potential for electrocution of Swainson's hawks associated with the proposed gen-tie line, construction of the gen-tie line shall apply Avian Power Line Interaction Committee measures as described in Suggested Practices for Avian Protection on Power Lines (APLIC 2006).

Nesting Birds

MM-BIO-1.8. **Bird nest pre-construction surveys.** The following measures shall be implemented to ensure compliance with California Fish and Game Code Sections 3503 and 3503.5 which protect active nests of birds, including native and special-status birds:

1. If ground-disturbance activities will occur during the nesting season of native bird species potentially nesting on the site (generally March 1 through August 30 for most common species in this region), a pre-construction nesting bird survey shall be conducted by a qualified biologist to determine if active nests of birds are present within the construction zone or within 100 feet (300 feet for non-listed raptors) of the construction zone.
10. The survey should be conducted within 10 days prior to proposed construction or site preparation activities. If 10 days has elapsed after surveys have been completed and proposed construction activities have not commenced, another round of surveys shall be conducted such that no more than 10 days will have elapsed between the initiation of surveys and construction activities.

11. If active nests are found during the surveys, a suitable avoidance buffer from each active nest shall be determined by the qualified biologist. The avoidance buffer distance shall consider such factors as intensity and extent of the disturbance, timing relative to the nesting cycle, species of bird, and anticipated ground disturbance schedule. Limits of construction to avoid active nests shall be established in the field with flagging, fencing, or other appropriate barriers and shall be maintained until the chicks have fledged and the nests are no longer active, as determined by the qualified biologist. The biologist shall periodically monitor any active nests during construction to ensure that there are no inadvertent impacts to nesting birds.

Western Red Bat

MM-BIO-1.9. **Bat roost pre-construction surveys**. The Project applicant shall retain a qualified bat biologist to implement the following measures to avoid and minimize impacts to bat day roosts, maternity roosts, and individuals of the western red bat:

1. Surveys for roosting bats shall be conducted during the maternity season (March 1 to July 31) for any construction or ground disturbance that occurs within 300 feet of habitat capable of supporting bat nursery colonies. These areas shall be surveyed by a qualified bat biologist and shall include a minimum of one (1) day and one (1) evening visit.
2. Should an active maternity roost be identified, the roost shall not be disturbed and vegetation- and/or ground-disturbing activities within 300-feet shall be postponed or halted until the roost is vacated and juveniles (if a maternity roost) have fledged, as determined by the qualified bat biologist. This avoidance measure shall be applied to all bat species, including special-status and non-special-status species.
3. No earlier than 30 days prior to the commencement of vegetation- and ground-disturbing activities associated with the Project site, a qualified biologist shall conduct pre-construction surveys of identified trees to be removed to determine if active day roosts of bats are present within the trees to avoid the potential of harm or mortality to individual bats.
4. If a day roost (or winter roost) is found in trees within or immediately adjacent to the disturbance footprint, the individuals shall be safely evicted under the direction of the qualified bat biologist. If individuals cannot be safely evicted from a winter roost due to factors such as cold temperatures or lack of alternative roosting sites, as determined by the qualified bat biologist, vegetation- and/or ground-disturbing activities within 300-feet of the roost shall be postponed or halted until conditions are suitable for safe eviction or the roost is vacated naturally.

6.3.2 Riparian Habitat and Sensitive Natural Communities

Impact BIO- 2. Implementation of the proposed Project may have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service. This would be considered a less-than-significant impact.

As detailed in Appendix C and Section 5.3, Potentially Jurisdictional Aquatic Resources, the Project site and gen-tie alignment do not support riparian habitat. Additionally, as described in Section 5.1, Existing Conditions – Vegetation

and Land Cover Types, the Project site and gen-tie alignment do not contain any identified sensitive natural community. Therefore, there would be **no significant impact** to any riparian habitat or sensitive natural community.

6.3.3 State and Federally Protected Wetlands

Impact BIO-3. Implementation of the proposed Project may have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. This would be considered a less-than-significant impact.

As detailed in Appendix C and Section 5.3, Potential Jurisdictional Aquatic Resources, no wetlands, waters, or riparian habitats under the jurisdiction of the USACE, RWQCB, CDFW, or the County were identified. Therefore, **no significant impacts** would occur to state or federally protected wetlands.

6.3.4 Wildlife Corridors and Habitat Connectivity

Impact BIO- 4. Implementation of the proposed Project may interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. This would be considered a less-than-significant impact.

Natural habitats patches that permit wildlife to move between large areas of habitat, such as between the Coast Range foothills to the west of I-5 and isolated areas of suitable habitat on the Valley floor, are absent from the Project site and vicinity. In addition, larger habitat areas on the Valley floor, such as the Mendota Wildlife Area and the Kerman Ecological Reserve, are located well to the north or south, therefore away from expected travel routes of species such as American badger or San Joaquin kit fox. A least-cost corridor analysis conducted for San Joaquin kit fox under current conditions (Cypher et al. 2007) and under a proposed alternative for disposing of agricultural drainage water identified no potential corridors for San Joaquin kit fox near the Project site (Cypher et al. 2007). The drainage issue has not since been resolved, and conditions affecting San Joaquin kit fox movement in the region remain the same. Therefore, because no movement corridors occur in the vicinity, **no significant impacts** would occur to wildlife movement.

6.3.5 Local Policies or Ordinances Protecting Biological Resources

Impact BIO- 5. Implementation of the proposed Project may conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. This would be considered a less-than-significant impact.

With implementation of appropriate species mitigation, the Project will not conflict with any adopted local plan, such as the County General Plan (Fresno County 2000). Thus, there will be **no significant impact** to, or conflicts with, local policies or ordinances protecting biological resources.

6.3.6 Regional Resource Planning

Impact BIO- 6. Implementation of the proposed Project may conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. This would be considered a less-than-significant impact.

To date, there are no adopted Habitat Conservation Plans, Natural Community Conservation Plans, or other approved habitat conservation plans that cover the Project site. Therefore, the Project would not be in conflict with an adopted habitat conservation plan and **no significant impact** would occur.

6.3.7 Regional Impacts Context

Analysis Approach

Because cumulative impacts, as defined by CEQA, will be analyzed as part of future CEQA environmental review and documentation prepared for the Project, the focus of this section is to provide some context of potential Project impacts on sensitive biological resources relative to those resources currently existing in the Project region. The Project would not result in any impacts to sensitive vegetation communities, rare plants, aquatic features, or wildlife corridors; as such implementation of the Project would not have an adverse effect on these resources within the Project region. In addition, because no potential San Joaquin kit fox burrows were observed during site surveys, and because the species is not expected to use the site for breeding purposes due to the site being actively used for agriculture, San Joaquin kit fox are only expected to use the site irregularly during movement events. Therefore, the conversion of the site to a solar facility would not have an adverse effect on regional breeding habitat for this species.

However, because the existing Project site is assumed to be used as foraging habitat by Swainson's hawk, including the pair observed attempting to nest on the site in 2020, as well as potentially other pairs observed to be nesting in the vicinity of the Project site, and because the Project site could also be used as foraging and/or breeding habitat by northern harrier and burrowing owl, and winter habitat for mountain plover, the analysis that follows examines the potential loss of the on-site foraging/breeding habitat relative to existing habitat for these species in the Project region. Because CDFW recommends mitigation for impacts to Swainson's hawk foraging habitat within 10 miles of any known Swainson's hawk nest (CDFG 1994), the regional context for the evaluation of potential Project impacts on the habitat of these avian species is based on the availability of habitat within 10 miles of the Project site.

The presence of potential breeding and/or foraging habitat within 10 miles of the Project site that is similar to what occurs on the site for the above-described species is based on Fresno County land use data (2019) (Figure 7). Because Project impacts would occur only on agricultural land (Figure 6), only parcels with land use designations for field crops and dry-land farming (which are the two primary land cover types on the Project site) are considered; this excludes agricultural uses such as vineyards and orchards that do not provide similar habitat to those agricultural uses on the Project site. Based on an evaluation of the County land use data, a total of 218,773 acres of similar agricultural lands to that which occurs on the Project site are present within 10 miles of the site. This acreage does not include potentially suitable habitat within Madera County, as land use data for this county was not available.

Swainson's Hawk

Because no direct impacts would occur to Swainson's hawk nesting habitat or known Swainson's hawk nesting locations, the Project would not adversely affect nesting habitat. Therefore, the analysis below focuses on impacts to foraging habitat relative to that which occurs within 10 miles of the Project site.

The 1,700 acres of fallow agricultural land that serves as suitable Swainson's hawk foraging habitat that would be removed by the Project would constitute approximately 0.77 percent of the total amount of similar habitat within 10 miles of the Project site. As stated in Section 6.3.1 above, Estep and Dinsdale (2012) noted that the density of Swainson's hawk nesting west of Fresno Slough (which includes the Project site) is much lower compared to portions of the County east of Fresno Slough despite the large acreage of foraging habitat available to Swainson's

hawks to the west. At the same time, Estep and Dinsdale (2012) noted that a large proportion of the trees in the area east of the Fresno Slough (between Fresno Slough and I-5) were occupied by nesting Swainson's hawks. According to Estep and Dinsdale (2012), "this pattern suggests that the agricultural landscape in this area (the area west of the Fresno Slough), while only moderately suitable compared with the eastern portion of the study area [east of Fresno Slough], could support additional Swainson's Hawk nesting pairs and that the lack of nesting habitat may be the primary factor limiting population size in that area." If Estep and Dinsdale (2012) are correct, then availability of foraging habitat is not limiting in this area and the loss of 1,700 acres of potential foraging habitat should not result in any reduction of Swainson's hawk nesting near the Project site (i.e., limited opportunities for nesting likely already limit the number of Swainson's hawk pairs in the area). As also noted in Section 6.3.1 above, a recent study in Sacramento County regarding the use of solar array fields as foraging habitat by raptors concluded that Swainson's hawks and several other raptor species will forage within solar array fields that continue to have available habitat between the arrays (Estep 2013). As such, Swainson's hawks are expected to continue to forage within the interstitial areas between and around panel arrays on the Project site.

Because the reduction of Swainson's hawk foraging habitat from the Project itself would likely not reduce Swainson's hawk nesting in the region, and because abundant suitable habitat would remain for Swainson's hawks that occupy the limited nesting habitat within 10 miles of the Project site, and because Swainson's hawks are still expected to forage within available habitat areas on the Project site after the solar arrays have been installed, the Project's impact on regional Swainson's hawk foraging habitat is considered inconsequential.

Burrowing Owl

As noted in Section 6,3.1 above no suitable burrows for burrowing owl were observed during the 2019 survey and the potential for the species to nest on site is considered low. However, the field crops occurring on the Project site support suitable foraging habitat for burrowing owl. As with the Swainson's hawk, the loss of 1,700 acres of suitable burrowing owl foraging habitat associated with the Project would constitute approximately 0.77 percent of the total amount of similar habitat within 10 miles of the Project site. In addition, nesting areas for this species are limited to small areas that remain untilled or otherwise undisturbed for extended periods. As such, available nesting habitat, not foraging habitat, is the primary limiting factor for burrowing owls in the region and with implementation of Mitigation Measure BIO-1_5 the Project is not expected to have adverse impacts to nesting burrowing owls. Therefore, the Project's impact on regional burrowing owl foraging habitat is considered inconsequential.

Mountain Plover

As noted in Section 6.3.1 above, the Project site supports only marginally suitable winter foraging habitat for mountain plover, which favors fallow land, burned fields, and heavily grazed grasslands. The land-use category most suitable for mountain plover foraging is pasture. As with the Swainson's hawk and burrowing owl, the loss of 1,700 acres of suitable mountain plover winter foraging habitat associated with the Project would constitute approximately 0.77 percent of the total amount of similar habitat within 10 miles of the Project site. As such, the Project's impact on regional mountain plover winter foraging habitat is considered inconsequential.

Northern Harrier

As noted in Section 6.3.1 above, the regularly disked and managed fields on the Project site currently provide marginally suitable nesting and foraging habitat for the species. Although some crops, such as grain crops, may provide habitat for this species, no crops have been observed planted on the field during recent visits. As with the avian species above, the loss of 1,700 acres of suitable northern harrier foraging habitat associated with the Project would constitute approximately 0.77 percent of the total amount of similar habitat within 10 miles of the Project site. As such, the Project's impact on northern harrier foraging habitat is considered inconsequential.

Appendix A

Descriptions of Soils Occurring on the Project Site

Based on review of the U.S. Department of Agriculture-Natural Resource Conservation Service web soil survey (USDA USDA-NRCS 2019), the soils on the Project site and gen-tie alignment include Tranquility clay, saline-sodic, wet, 0 to 1% slopes; Ciervo clay, saline-sodic, wet, 0 to 1% slopes; and Calflax clay loam, saline-sodic, wet, 0 to 1% slopes MLRA 17. A brief summary of the soils located on the Project site is provided herein based on the series descriptions provided by the USDA NRCS because biological resources can often be associated with various substrates; this is particularly true of some special-status plant species and wetland resources. These soils vary widely in depth, fertility, and permeability.

A brief description of the surface soils present within the Project site based on the USDA NRCS Official Soil Series Descriptions (OSDs) (USDA-NRCS 2019) is provided below.

Tranquility Clay, Saline-Sodic, Wet, 0 to 1 Percent Slopes

The Tranquility series consists of very deep, somewhat poorly drained soils on fan skirts which formed in alluvium derived dominantly from calcareous sedimentary rock. In areas where this soil occurs, the mean annual precipitation is 8 inches and the mean annual air temperature is 63°F. These soils are used for irrigated crops such as cotton and wheat. They are also used for wildlife habitat on the west edge of Mendota Wildlife Management Area. Vegetation on wildlife management areas consists primarily of timothy, watergrass, and saltbush. This soil type is the most common throughout the Project site.

Taxonomic class. Tranquility: Fine, smectitic, thermic Sodic Haploxererts

Typical Pedon

Ap1–0 to 6 inches; grayish brown (2.5Y 5/2) clay; dark grayish brown (2.5Y 4/2) moist; strong coarse subangular blocky structure, extremely hard, very firm, very sticky and very plastic; common very fine roots; few very fine tubular pores; violently effervescent, carbonates disseminated; calcium carbonate equivalent is 3 percent; electrical conductivity is 2.6 decisiemens per meter; sodium adsorption ratio is 14; moderately alkaline (pH 8.2); abrupt smooth boundary. (2 to 8 inches thick).

Ap2–6 to 16 inches; grayish brown (2.5Y 5/2) clay; dark grayish brown (2.5Y 4/2) moist; moderate medium subangular blocky structure, very hard, very firm, very sticky and very plastic; few very fine roots; few very fine tubular pores; violently effervescent, carbonates disseminated and segregated as few fine irregularly shaped concentrations; calcium carbonate equivalent is 4 percent; common fine irregularly shaped gypsum crystals; gypsum content is less than 1 percent; electrical conductivity is 8.7 decisiemens per meter; sodium adsorption ratio is 24; moderately alkaline (pH 8.3); abrupt smooth boundary. (8 to 18 inches thick).

Ciervo Clay, Saline-Sodic, Wet, 0 to 1 Percent Slopes

The Ciervo series consists of very deep, moderately well drained soils on fan skirt formed in alluvium from sedimentary rock. In areas where this soil occurs, the mean annual precipitation is about 7 inches, and the mean annual air temperature is 63°F. These soils are used principally for irrigated crops such as cotton, seed alfalfa, sugar beets, wheat, onions and tomatoes. Native vegetation is annual grasses, forbs, and saltbrush. This soil type is present in the northwestern and middle portions of the Project site.

Taxonomic class. Ciervo: Fine, smectitic, thermic Vertic Haplocambids

Typical Pedon

Ap1--0 to 7 inches; light brownish gray (2.5Y 6/2) clay, dark grayish brown (2.5Y 4/2) moist; moderate medium and coarse subangular blocky structure; hard, firm, very sticky, and very plastic; few very fine, fine and medium roots; common very fine tubular pores; strongly effervescent, carbonates disseminated, calcium carbonate equivalent is 3 percent; electrical conductivity is 1.2 decisiemens per meter; sodium adsorption ratio is 3; moderately alkaline (pH 8.1); abrupt smooth boundary. (3 to 10 inches thick)

Ap2--7 to 17 inches; light brownish gray (2.5Y 6/2) clay, dark grayish brown (2.5Y 4/2) moist; moderate coarse subangular blocky structure; very hard, firm, moderately sticky, and moderately plastic; few very fine and fine roots; common very fine tubular pores; strongly effervescent, carbonates disseminated, calcium carbonate equivalent is 3 percent; electrical conductivity is 1.2 decisiemens per meter; sodium adsorption ratio is 6; moderately alkaline (pH 8.3); abrupt smooth boundary. (5 to 15 inches thick)

Calfax Clay Loam, Saline-Sodic, Wet, 0 to 1 Percent Slopes

The Calfax series consists of very deep, moderately well drained soils on fan skirt formed in alluvium from calcareous sedimentary rock. In areas where this soil occurs, the mean annual precipitation is about 7 inches, and the mean annual air temperature is 63°F. These soils are used principally for crops such as cotton, seed alfalfa, sugar beets, wheat, and safflower. Native vegetation is annual grasses, forbs, and saltbrush. This soil type is present in the northwestern portion of the Project site.

Taxonomic class. Calflax: Fine-loamy, mixed, superactive, thermic Sodic Haplocambids

Typical Pedon

Ap--0 to 8 inches; light yellowish brown (2.5Y 6/4) clay loam, dark grayish brown (2.5Y 4/2) moist; strong coarse subangular blocky structure parting to strong medium subangular blocky; hard, very friable, moderately sticky and moderately plastic; few fine and common medium and fine roots; many very fine tubular and interstitial pores; slightly effervescent, carbonates disseminated; electrical conductivity is 3.6 decisiemens per meter; sodium adsorption ratio is 4; slightly alkaline (pH 7.4); abrupt smooth boundary. (6 to 10 inches thick).

Bw--8 to 26 inches; light olive brown (2.5Y 5/4) clay loam, olive brown (2.5Y 4/4) moist; moderate coarse prismatic and moderate medium subangular blocky structure; hard, friable, moderately sticky and moderately plastic; common very fine roots; many very fine tubular and interstitial pores; slightly effervescent, carbonates disseminated; electrical conductivity is 2.8 decisiemens per meter; sodium adsorption ratio is 5; slightly alkaline (pH 7.4); clear smooth boundary. (16 to 20 inches thick).

Appendix B

List of Wildlife Species Observed

Birds

Blackbirds, Orioles and Allies

ICTERIDAE—BLACKBIRDS

Agelaius phoeniceus—red-winged blackbird
Euphagus cyanocephalus—Brewer's blackbird
Icterus bullockii—Bullock's oriole
Sturnella neglecta—western meadowlark
* *Molothrus ater*—brown-headed cowbird

Falcons

FALCONIDAE—CARACARAS AND FALCONS

Falco sparverius—American kestrel

Finches

FRINGILLIDAE—FRINGILLINE AND CARDUELINE FINCHES AND ALLIES

Haemorhous mexicanus—house finch

Flycatchers

TYRANNIDAE—TYRANT FLYCATCHERS

Empidonax wrightii—gray flycatcher
Sayornis nigricans—black phoebe
Sayornis saya—Say's phoebe
Tyrannus verticalis—western kingbird

Hawks

ACCIPITRIDAE—HAWKS, KITES, EAGLES, AND ALLIES

Buteo jamaicensis—red-tailed hawk
Buteo swainsoni—Swainson's hawk
Circus hudsonius—northern harrier

Herons and Bitterns

ARDEIDAE—HERONS, BITTERNS, AND ALLIES

Ardea alba—great egret
Ardea herodias—great blue heron
Egretta thula—snowy egret

Jays, Magpies and Crows

CORVIDAE—CROWS AND JAYS

Corvus brachyrhynchos—American crow

Corvus corax—common raven

Larks

ALAUDIDAE—LARKS

Eremophila alpestris—horned lark

Mockingbirds and Thrashers

MIMIDAE—MOCKINGBIRDS AND THRASHERS

Mimus polyglottos—northern mockingbird

Old World Sparrows

PASSERIDAE—OLD WORLD SPARROWS

* *Passer domesticus*—house sparrow

Owls

TYTONIDAE—BARN OWLS

Tyto alba—barn owl

STRIGIDAE—TYPICAL OWLS

Bubo virginianus—great horned owl

Pigeons and Doves

COLUMBIDAE—PIGEONS AND DOVES

Zenaida macroura—mourning dove

* *Streptopelia decaocto*—Eurasian collared-dove

Shorebirds

CHARADRIIDAE—LAPWINGS AND PLOVERS

Charadrius vociferus—killdeer

SCOLOPACIDAE—SANDPIPERS, PHALAROPES, AND ALLIES

Numenius phaeopus—whimbrel

Shrikes

LANIIDAE—SHRIKES

Lanius ludovicianus—loggerhead shrike

Swallows

HIRUNDINIDAE—SWALLOWS

Hirundo rustica—barn swallow

Petrochelidon pyrrhonota—cliff swallow

Wagtails and Pipits

MOTACILLIDAE—WAGTAILS AND PIPITS

Anthus rubescens—American pipit

New World Sparrows

PASSERELLIDAE—NEW WORLD SPARROWS

Zonotrichia leucophrys—white-crowned sparrow

Mammals

Hares and Rabbits

LEPORIDAE—HARES AND RABBITS

Lepus californicus—black-tailed jackrabbit

Sylvilagus bachmani—brush rabbit

Squirrels

SCIURIDAE—SQUIRRELS

Spermophilus (Otospermophilus) beecheyi—California ground squirrel

* signifies introduced (non-native) species

Photo 2: View of the western edge of the Project site, Tamarisk community, from S Derrick Ave (Hwy 33) facing north

Photo 3: View of the center of the Project site, along S Monterey Ave and W South Ave, facing northwest

Photo 4: Agricultural ditch west of S Monterey Ave, facing north

Photo 5: View of the northwestern edge of the Project site from W Adams Ave facing south

Photo 6: View of the central section of the Project site, along S Monterey Ave, facing south

Photo 7: View of an agricultural field in the central section of the Project site, east of S Monterey Ave, facing east

Photo 8: View of the southeastern/central section of the Project site, along W South Ave, facing east

Photo 9: View of disked fields within the Project site along S Monterey Ave at W South Ave, facing west

Photo 10: View of the southern boundary of the site along W Manning Ave at S Monterey Ave, facing west

Photo 11: Typical example of burrows discovered along the roadsides and within ditches of the Project site during the 2019 burrowing owl surveys

Photo 12: Failed Swainson's hawk nest (SWHA-02) from 2019 surveys. A great-horned owl and barn owl perched in tree.

Photo 13: Successful 2019 Swainson's hawk nest (SWHA-07) along from S Derrick Ave (Hwy 33) north of the project site. Chick observed in the nest.

Photo 14: A pair of Swainson's hawks in nest tree (SWHA-09) discovered during 2020 supplemental reconnaissance-level survey

INTENTIONALLY LEFT BLANK

F-2 Species with Potential Occurrences

TABLE 4.5-2
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE PROJECT SITE

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Plants			
Atriplex cordulata var. *cordulata* heartscale	--/--/1B.2	Chenopod scrub, meadows and seeps, valley and foothill grassland (sandy); saline or alkaline. Annual herb. Blooms Apr–Oct. Elevation 0–1837 m.	**Not Present.** Suitable scrub, meadow or alkali playa habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex cordulata var. *erecticaulis* Earlimart orache	--/--/1B.2	Chenopod scrub, valley and foothill grassland, vernal pools; alkaline. Annual herb. Blooms Apr–Aug. Elevation 164–2083 m.	**Not Present.** Suitable scrub, grassland, alkali or vernal pool habitat is absent from the Project site. No occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex coronata var. *vallicola* Lost Hills crownscale	--/--/1B.2	Chenopod scrub, valley and foothill grassland, vernal pools; alkaline. Annual herb. Blooms Apr–Aug. Elevation 164–2083 m.	**Not Present.** Suitable scrub, grassland, alkali sink or vernal pool habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex depressa brittlescale	--/--/1B.2	Chenopod scrub, meadows and seeps, playas, valley and foothill grassland, vernal pools; alkaline, clay. Annual herb. Blooms Apr–Oct. Elevation 3–1050 m.	**Not Present.** Suitable scrub, playa, alkaline sink or vernal pool habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex minuscula lesser saltscale	--/--/1B.1	Chenopod scrub, playas, valley and foothill grassland; alkaline, sandy. Annual herb. May–Oct. Elevation 49–656 m.	**Not Present.** Suitable scrub, playa or grassland habitat is absent from the Project site. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex persistens vernal pool smallscale	--/--/1B.2	Vernal pools, alkaline. Annual herb. Blooms June, Aug, Sep, Oct. Elevation 30-375 m.	**Not Present.** The Project site lacks suitable vernal pool habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Atriplex subtilis subtle orache	--/--/1B.2	Valley and foothill grassland; alkaline. Annual herb. Blooms June, Aug, Sep(Oct). Elevation 130–330 m.	**Not Present.** The Project site lacks suitable valley and foothill grassland habitat. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Chloropyron palmatum palmate-bracted bird's-beak	FE/CE/1B.1	Chenopod scrub, valley and foothill grassland; alkaline. Annual herb (hemiparasitic). Blooms May–Oct. Elevation 16–509 m.	**Not Present.** Suitable scrub, alkali playa or grassland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Deinandra halliana Hall's tarplant	--/--/1B.2	Clay, sometimes alkaline; chenopod scrub; cismontane woodland; valley and foothill grassland. Annual herb. Blooms Apr-May. Elevation 260-950 m.	**Not Present.** Suitable scrub, alkaline clay, or grassland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Delphinium recurvatum recurved larkspur	--/--/1B.2	Chenopod scrub, meadows and seeps, playa, valley and foothill grassland; alkaline. Perennial herb. Blooms Mar–June. Elevation 10–2592 m.	**Not Present.** Suitable scrub, woodland, alkali playa or grassland habitat is not present on-site. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Eryngium spinosepalum spiny-sepaled button-celery	--/--/1B.2	Valley and foothill grassland, vernal pools. Annual/perennial herb. Blooms Apr–June. Elevation 260–3,200 m.	**Not Present.** The Project site lacks suitable valley and foothill grassland, and vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).

TABLE 4.5-2 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE PROJECT SITE

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Lasthenia chrysantha alkali-sink goldfields	--/--/1B.1	Valley grassland, alkali sink, wetland-riparian. Annual herb. Blooms Feb-June.	**Not Present.** Suitable alkali sink, grassland or wetland habitat is not present on-site.
Layia munzii Munz's tidy-tips	--/--/1B.2	Chenopod scrub, valley and foothill grassland (alkaline clay). Annual herb. Blooms Mar–Apr. Elevation 492–2297 m.	**Unlikely.** Suitable scrub, alkali playa or grassland habitat is not present on-site. Historical 1940 occurrence northeast of the Project site (CDFW 2021).
Lepidium jaredii ssp. *album* Panoche peppergrass	--/--/1B.2	Valley and foothill grassland (steep slopes, clay). Annual herb. Blooms Feb– June. Elevation 607–902 m.	**Not Present.** Suitable grassland habitat is not present on-site. Also, the site is outside of the species' known elevation range. The nearest CNDDB occurrence is approximately 3.9 miles west of the Project site (CDFW 2021).
Monolopia congdonii San Joaquin woollythreads	FE/--/1B.2	Chenopod scrub, valley and foothill grassland (sandy). Annual herb. Blooms Feb–May. Elevation 197–2625 m.	**Unlikely.** Project site lacks suitable scrub or sandy grassland habitat. An occurrence just north of the site from 1935 is probably extirpated (CDFW 2021).
Navarretia nigelliformis ssp. radians shining navarretia	--/--/1B.2	Sometimes clay; cismontane woodland; valley and foothill grassland; vernal pools. Annual herb. Blooms Apr-Jul. Elevation 65-1000 m.	**Not Present.** Project site lacks suitable clay, grassland, vernal pool or woodland habitat. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Puccinellia simplex California alkali grass		Chenopod scrub, meadows and seeps, valley and foothill grassland, vernal pools; alkaline, vernally mesic; sinks, flats, and lake margins. Annual herb. Blooms Mar– May. Elevation 5–3,050 m.	**Not Present**. The Project site lacks suitable chenopod scrub, meadows and seeps, valley and foothill grassland, and vernal pool habitats. In addition, there are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Sagittaria sanfordii Sanford's arrowhead	--/--/1B.2	Marshes and swamps (assorted shallow freshwater). Perennial rhizomatous herb. Blooms May–Oct (Nov). Elevation 0–2133 m.	**Not Present.** Project site lacks marsh and swamp habitat, though species could occur in ditches. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Invertebrates			
Branchinecta longiantenna longhorn fairy shrimp	FE/--	Sandstone outcrop pools, alkaline grassland vernal pools, and pools within alkali sink and alkali scrub communities.	**Not Present.** Species limited to four known sites. Project site lacks vernal pools.
Branchinecta lynchi vernal pool fairy shrimp	FT/--	Vernal pools, seasonally ponded areas within vernal swales, and ephemeral freshwater habitats.	**Not Present.** Suitable vernal pool habitat is not present on the Project site.
Reptiles and Amphibians			
Anniella pulchra Northern California legless lizard	--/SSC	Coastal dunes, stabilized dunes, beaches, dry washes, valley–foothill, chaparral, and scrubs; pine, oak, and riparian woodlands; associated with sparse vegetation and sandy or loose, loamy soils.	**Unlikely.** The Project site lacks shrubs for cover, and sandy/loose soils. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).

TABLE 4.5-2 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE PROJECT SITE

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Emys marmorata western pond turtle	--/SSC	Rivers, creeks, small lakes, ponds, marshes, irrigation ditches and reservoirs. Turtles bask on land near water on logs, branches or boulders.	**Not Present.** The Project site lacks suitable aquatic habitat required for this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Gambelia sila blunt-nosed leopard lizard	FE/SE, FP	Sparsely vegetated alkali and desert scrubs, including semi-arid grasslands, alkali flats, and washes.	**Unlikely.** The Project site consists of actively farmed agricultural areas surrounded by similar land uses. The closest occurrence is approximately 4.8 miles southwest of the Project site (CDFW 2021).
Masticophis flagellum ruddocki San Joaquin whipsnake	--/SSC	Open, dry, treeless areas including grassland and saltbush scrub. This species needs mammal burrows for refuge.	**Unlikely.** The Project site is highly disturbed and consists of actively farmed agricultural areas. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Phrynosoma blainvillii coast horned lizard	--/SSC	Open areas of sandy soil in valleys, foothills, and semi-arid mountains including coastal scrub, chaparral, valley–foothill hardwood, conifer, riparian, pine–cypress, juniper, and annual grassland habitats.	**Unlikely.** The Project site lacks suitable loose, sandy soils and shrub cover required for this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Spea hammondii western spadefoot	--/SSC	Primarily grassland and vernal pools, but also ephemeral wetlands that persist at least 3 weeks in chaparral, coastal scrub, valley–foothill woodlands, pastures, and other agriculture.	**Unlikely.** The Project site lacks suitable aquatic habitat for this species. The nearest CNDDB occurrence is approximately 4.4 miles southwest of the Project site (CDFW 2021).
Thamnophis gigas giant garter snake	FT/ST	Highly aquatic: found in freshwater marsh habitat and low-gradient streams; also uses canals and irrigation ditches.	**Not Present.** The Project site lacks aquatic habitat required by this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Thamnophis hammondii two-striped gartersnake	--/SSC	Highly aquatic: found in streams, creeks, pools, streams with rocky beds, ponds, lakes, and vernal pools.	**Not Present.** The Project site lacks aquatic habitat required by this species. There are no occurrences within approximately 5 miles of the Project site (CDFW 2021).
Birds			
Agelaius tricolor tricolored blackbird	--/Candidate Endangered	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture.	**Unlikely.** The Project site lacks suitable marsh nesting habitat, although provides foraging areas within cultivated agricultural lands for nearby nesting or wintering habitat. Known to nest approximately 3.5 miles northeast of the Project site (CDFW 2021). Additional suitable habitat present in the Mendota Wildlife Area.
Asio flammeus short-eared owl	--/SSC	Grassland, prairies, dunes, meadows, irrigated lands, and saline and freshwater emergent wetlands. Nests on ground in salt or freshwater marshes, irrigated grain or alfalfa fields, ungrazed grasslands, and old pastures.	**Unlikely.** The Project site has marginal ground vegetation and herbaceous cover in the tamarisk groves, but these areas are small and surrounded by disturbed land. This species may forage in agricultural fields within the Project site. No occurrences within approximately 5 miles of the Project site (CDFW 2021).

TABLE 4.5-2 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE PROJECT SITE

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Athene cunicularia burrowing owl	--/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows. This species requires short vegetation with sparse shrubs and burrows for roosting and nesting.	**Unlikely.** The Project site has minimal habitat features to support this species. A few suitable burrows were observed near the proposed substation location in the center of the site, but protocol surveys onsite were negative (Dudek, 2020). The nearest CNDDB occurrence is approximately 3.6 miles northeast of the Project site (CDFW 2021).
Buteo swainsoni Swainson's hawk	--/ST	Nests in open woodland and savanna, riparian, and in isolated large trees; forages in nearby grasslands and agricultural areas such as wheat and alfalfa fields and pasture.	**Present.** Nesting hawks present onsite in Tamarisk trees near SR-33. Suitable agricultural foraging habitat occurs on the Project site. Four additional active nests were found within a 5-mile radius of the site, including one along the gen-tie route (Dudek, 2020).
Charadrius montanus mountain plover	--/SSC	Winters in shortgrass prairies, plowed fields, open sagebrush, and sandy deserts. Does not breed in California.	**Moderate Potential.** Although this species prefers prairie habitats, grazed grasslands, or burned fields, they may forage on tilled fields in winter. The nearest CNDDB occurrence is approximately 4.6 miles northeast (CDFW 2021).
Coccyzus americanus occidentalis Western yellow-billed cuckoo	FT/SE	Nests in dense riparian woodlands and forest with well-developed understories.	**Not Present.** Suitable habitat is absent from the Project site.
Lanius ludovicianus loggerhead shrike	--/SSC	Nests and forages in open habitats with scattered shrubs, trees, or other perches.	**Present.** This species was observed perched in Tamarisk trees onsite and may utilize idle agricultural lands for foraging (Appendix F1).
Riparia riparia Bank swallow	--/ST	Nests in riparian, lakeside, and coastal areas with vertical banks, bluffs, and cliffs with sandy soils; crosses open country with water during migration.	**Unlikely.** The Project site lacks vertical sandy bank habitat for nesting but the species may forage here. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Mammals			
Ammospermophilus nelsoni Nelson's antelope squirrel	--/ST	Arid annual grassland or shrubland with rolling hills or sandy washes, with or without shrubs including saltbush *(Atriplex spp.*), California jointfir (*Ephedra californica*), bladderpod (*Physaria* spp.*),* goldenbush (*Astereae*), snakeweed (*Gutierrezia* spp.*)* Prefers fine-textured soils.	**Unlikely.** Regular tilling of soils at the Project site makes the site unsuitable as habitat. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Dipodomys ingens giant kangaroo rat	FE/SE	Fine sandy loam soils with sparse forb vegetation and low-density alkali desert scrub.	**Unlikely.** The Project site lacks the required open desert with scattered shrubs or sandy loam soils. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).

TABLE 4.5-2 (CONTINUED)
SPECIAL-STATUS SPECIES POTENTIAL TO OCCUR WITHIN THE PROJECT SITE

Species	Status Fed/State/CNPS*	Habitat	Potential to Occur
Dipodomys nitratoides exilis Fresno kangaroo rat	FE/SE	Alkali sink/open grassland habitats; sands and saline sandy soils in chenopod scrub.	**Unlikely.** Regular tilling of soils at the Project site make it unsuitable for habitat. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Eumops perotis californicus western mastiff bat	--/SSC	Chaparral, coastal and desert scrub, coniferous and deciduous forest and woodland; Suitable habitat consists of extensive open areas with abundant roost locations provided by crevices in rock outcrops, trees, tunnels, and buildings.	**Unlikely.** No suitable crevices or caves for roosting. The Project site provides suitable foraging habitat over agricultural fields. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Lasiurus blossevillii western red bat	--/SSC	Roosts in tree canopy in forests, woodlands, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange.	**Unlikely.** Limited trees for roosting (small clumps of tamarisk); species may forage in area. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Onychomys torridus tularensis Tulare grasshopper mouse	--/SSC	Low, open scrub, and semi-scrub habitats in arid semi-desert associations.	**Unlikely.** The Project site lacks shrubland communities typically associated with this species. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Taxidea taxus American badger	--/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils.	**Unlikely.** Badgers burrow in open areas, including ranchlands and agricultural fields; however, the Project site is regularly tilled and surrounded by other agricultural sites. There are no CNDDB occurrences within approximately 5 miles of the Project site (CDFW 2021).
Vulpes macrotis mutica San Joaquin kit fox	FE/ST	Grasslands and scrublands, including disturbed areas; oak woodland, alkali sink scrubland, vernal pools, and alkali meadows.	**Moderate Potential.** The Project site provides suitable habitat where this species may forage. No suitable burrows were observed during biological surveys. The nearest CNDDB observation is approximately 6 miles southwest of the Project site (CDFW 2021). Species may disperse through the Project site during migration.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, under the jurisdiction of the U.S. Fish and Wildlife Service (Service) that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the Service under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Please follow the link below to see if your proposed project has the potential to affect other species or their habitats under the jurisdiction of the National Marine Fisheries Service:

http://www.nwr.noaa.gov/protected_species/species_list/species_lists.html

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to

utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Sacramento Fish And Wildlife Office
Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846
(916) 414-6600

Project Summary

Consultation Code: 08ESMF00-2021-SLI-2555
Event Code: 08ESMF00-2021-E-07381
Project Name: Sonrisa Solar
Project Type: POWER GENERATION
Project Description: Solar facility & gen-tie
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@36.60746255,-120.34928074950106,14z

Counties: Fresno County, California

Endangered Species Act Species

There is a total of 11 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Fresno Kangaroo Rat *Dipodomys nitratoides exilis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5150	Endangered
Giant Kangaroo Rat *Dipodomys ingens* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6051	Endangered
San Joaquin Kit Fox *Vulpes macrotis mutica* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/2873	Endangered

Birds

NAME	STATUS
California Condor *Gymnogyps californianus* Population: U.S.A. only, except where listed as an experimental population There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/8193	Endangered

Reptiles

NAME	STATUS
Blunt-nosed Leopard Lizard *Gambelia silus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/625	Endangered
Giant Garter Snake *Thamnophis gigas* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/4482	Threatened

Amphibians

NAME	STATUS
California Red-legged Frog *Rana draytonii* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/2891	Threatened

Fishes

NAME	STATUS
Delta Smelt *Hypomesus transpacificus* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/321	Threatened

Crustaceans

NAME	STATUS
Vernal Pool Fairy Shrimp *Branchinecta lynchi* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/498	Threatened

Flowering Plants

NAME	STATUS
Palmate-bracted Bird's Beak *Cordylanthus palmatus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/1616	Endangered
San Joaquin Wooly-threads *Monolopia (=Lembertia) congdonii* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/3746	Endangered

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

Subject: Results of the 2022 Swainson's Hawk Surveys Conducted for the Sonrisa Solar Park Project, Western Fresno County, California

Dear Mr. Cousineau:

At your request, Dudek has conducted Swainson's hawk (*Buteo swainsoni*) surveys for the Sonrisa Solar Park Project (Project) site in western Fresno County, California. This letter report describes methods and results of the surveys, which were conducted from April through July 2022.

1 Background

The Project site is in the western portion of the San Joaquin Valley, approximately 11 miles east of Interstate 5 and approximately 8 miles south of the City of Mendota, in unincorporated Fresno County. The Project site is located within Sections 17, 18, and 19 of Township 15 South, Range 15 East, as shown on the Cantua Creek, Coit Ranch, Levis, and Tranquility U.S. Geological Survey 7.5-minute quadrangles.

The Project site encompasses approximately 1,700 acres of agricultural lands and is bounded by agricultural fields in all directions, with State Route 33 immediately to the west (Figure 1, Project Location). West Adams Avenue extends along the northern boundary of the site, and West Manning Avenue extends along the southern boundary. In addition to the solar facility, the Project also includes a 230-kilovolt (kV) generation tie (gen-tie) line that would connect the proposed solar facility to the existing Pacific Gas & Electric (PG&E) Tranquility Switching Station, southwest of the Project site. The gen-tie line would extend from the southwest corner of the Project site along the west side of South Derrick Avenue for approximately 0.75 miles, and would be established to interconnect the proposed solar park to the existing Tranquility Switching Station, as shown in Figure 2, Project Site. The Tranquility Switching Station would be expanded to the north approximately 200 feet, increasing the size of the switching station by approximately 3 acres, to accommodate a new bay for the Project, as well as a potential additional bay to accommodate future projects. The switching station's electrical busbar (a conducting bar that carries heavy currents to supply several electric circuits) would not increase in size. The new 230 kV transmission line would extend from the Tranquility Switching Station to a point east of the existing substation near South Derrick Avenue. The PG&E transmission line would include approximately 1,900 feet of 230 kV conductor strung on approximately six new or existing tubular steel poles that would be approximately 140 feet high.

2 Methodology

Focused Swainson's hawk surveys were conducted according to the protocol endorsed by the California Department of Fish and Wildlife (CDFW) for the Central Valley, developed by the Swainson's Hawk Technical Advisory Committee (SHTAC 2000). In 2022, three surveys were conducted in Period III (April 5 through April 20), and three surveys were conducted in Period V (June 10 through July 31). The protocol recommends that surveys be conducted during a minimum of two of the five survey periods. Period I (January through March) is considered an optional survey period during which Swainson's hawks may not be present. Table 1 summarizes the Swainson's hawk surveys conducted on the Project site in 2022.

Table 1. Summary of 2022 Swainson's Hawk Surveys

Date	Time	Survey Pass	Personnel	Weather Conditions
4/5/2022	1552–1912	Pass 1	Kelsey Higney	69°F–79°F, 10%–20% cloud cover, 0–15 mph winds
4/6/2022	0642–2048	Pass 1	Kelsey Higney	54°F–77°F, 10% cloud cover, 4–8 mph winds
4/11/2022	1600–1930	Pass 2	Pedro Garcia	56°F–67°F, 20%–% cloud cover, 10–16 mph winds
4/12/2022	0715–1130	Pass 2	Pedro Garcia	45°F–55°F, 0% cloud cover, 4–17 mph winds
4/19/2022	1625–1941	Pass 3	Kelsey Higney	70°F–73°F, 40%–50% cloud cover, 1–15 mph winds
4/20/2022	0632–1123	Pass 3	Kelsey Higney	54°F–75°F, 20%–70% cloud cover, 0–2 mph winds
6/16/2022	1731–1956	Pass 4	Kelsey Higney	83°F–94°F, 0%–10% cloud cover, 1–15 mph winds
6/17/2022	0612–855	Pass 4	Kelsey Higney	62°F–74°F, 90% cloud cover, 0–1 mph winds
6/27/2022	1630–1830	Pass 5	Pedro Garcia	105°F–108°F, 0% cloud cover, 7–11 mph winds
6/28/2022	0830–1000	Pass 5	Pedro Garcia	79°F–84°F, 0% cloud cover, 2–7 mph winds
7/29/2022	1610–1733	Pass 6	Pedro Garcia	106°F, 0% cloud cover, 1–4 mph winds
7/30/2022	0700–0826	Pass 6	Pedro Garcia	74°F–76°F, 80%–90% cloud cover, 2–5 mph winds

During each survey, biologists visited suitable nest trees on and within approximately 0.5 miles of the Project site (including those identified during previous years' surveys). Where possible, trees or tree clusters were examined from multiple angles and for extended periods. Trees that were confirmed not to have nests during early surveys were not prioritized during later surveys. Some areas where biologists did not have access to private roads (such as along West South Avenue and unnamed agricultural roads through the proximity of the Project site) received relatively limited coverage. Locations of any observed Swainson's hawks and suitable or active nest structures were documented and mapped. After Swainson's hawk nests were identified, surveyors continued to visit the nest site once per survey pass to note the stage of nesting.

3 Results

Dudek biologists conducted six protocol-level surveys from April 5 to July 30, 2022 (Table 1). Four Swainson's hawk nests were observed and numerous individual Swainson's hawks were observed foraging throughout the Project site and in the immediate vicinity (Figure 3, 2022 Swainson's Hawk Observations).

Nest 1 (SWHA-09, discussed in the Biological Resources Report for the Project [Dudek 2021]), in a small willow (*Salix* sp.) tree at the corner of South Ohio Avenue and West Dinuba Avenue, southeast of the PG&E Tranquility Switching Station, was observed as active on April 6, 2022. This nest site is located approximately 0.33 miles southwest of the Sonrisa Solar Park gen-tie line boundary. Surveyors observed two adults at the nest site actively nest-building by flying to and from the nest tree with nesting materials and adding nesting materials to the historical nest. However, during subsequent survey visits (April 12, 19, and 20; June 16), surveyors did not observe any Swainson's hawk activity at or within the immediate location of Nest 1, and noted that the nest seemed incomplete. Due to lack of activity at the nest site, the nest was determined to be incomplete and inactive.

Nest 2 (new nest in 2022), in a tamarisk (*Tamarisk* sp.) tree on the western side of South Derrick Avenue, north of Manning Avenue, under a utility pole directly across from existing solar panels, was first observed as active on April 11, 2022. This nest site is located approximately 475 feet northwest of the Project boundary. Surveyors observed a Swainson's hawk pair nest-building and copulation on this date. On subsequent survey visits (April 12, 19, and 20), a female Swainson's hawk was observed sitting low in the nest, presumably incubating eggs. During survey visits June 16 to July 30, surveyors did not observe any activity at the nest, and determined the nest to be abandoned. Surveyors also noted that the nest tree appeared to have been significantly cut back by PG&E between the April and June site visits.

Nest 3 (SWHA-05, discussed in the Biological Resources Report [Dudek 2021], in a tamarisk tree within the Project boundary on the eastern side of South Derrick Avenue, south of West Adams Avenue, was observed as active on April 6, 2022. Surveyors observed a Swainson's hawk pair nest-building within the historical nest site on this date. On April 12, the pair was observed copulating and bringing dry grass material to the historical nest, and on April 19 and 20, a female Swainson's hawk was observed sitting low in the nest for extended periods, presumably incubating eggs. On June 16 and 17, surveyors observed one nestling in the nest, and determined the nest to be active and successful. No activity was observed at the nest on subsequent visits, and surveyors determined that the nestling likely fledged.

Nest 4 (new nest in 2022), in a tamarisk tree located on the eastern side of South Monterey Avenue, south of West Adams Avenue, was first observed as active on April 20, 2022. The nest site is located within the Project boundary. Surveyors observed a pair foraging and copulating near the nest tree on April 20. However, during subsequent visits in June and July, no additional nesting activity was observed at this location, and surveyors determined the nest to be inactive.

Swainson's hawks were observed foraging throughout the Project site and vicinity during 2022 nesting surveys. In early April 2022, large numbers of Swainson's hawks (approximately 25 to 30 individuals) were observed foraging within the agricultural and fallow fields west and southwest of the Project site.

Representative photos from the 2022 Swainson's hawk survey efforts are provided in Attachment A.

4 Discussion

As discussed in the Biological Resources Report (Dudek 2021), the Project site and immediate vicinity provides suitable nesting and foraging habitat for Swainson's hawk. Swainson's hawks have previously attempted to nest within the Project site in Nest 3 (in tamarisk), which is the same as Nest SWHA-05 as documented in surveys in 2019 and 2020; both nest attempts failed. In 2022, this nest was successful and produced at least one nestling. Three other nesting attempts were observed on or within 0.5 miles of the Project boundary in 2022, but none were successful.

5 Conclusion

As described earlier, Dudek biologists conducted six protocol-level Swainson's hawk surveys during spring and summer 2022 within the Sonrisa Solar Park Project Site, and within a 0.5-mile survey buffer from the site. Survey results discovered one Swainson's hawk nest pair that nested within the Project site in 2022, and raised at least one young to the late nestling stage. Although the fledging of this individual is unconfirmed, this observation confirms an active nest within the Project site according to the guidelines in the Staff Report Regarding Mitigation for Impacts to Swainson's Hawk (*Buteo swainsoni*) in the Central Valley, California (CDFG 1994). Swainson's hawks were also observed foraging at various locations immediately adjacent to the Project site, including large groups at two separate locations on different days.

Should you have any questions regarding this letter report, please contact me at 510.601.2512 or escricca@dudek.com.

Sincerely,

Emily M. Scricca, M.S.

Subject: 2023 Swainson's Hawk Nesting Survey Results, Proposed Sonrisa Solar Park Project, Western Fresno County, California

Dear Mr. Cousineau:

At your request, Dudek has completed Swainson's hawk (*Buteo swainsoni*) nesting surveys for the proposed Sonrisa Solar Park Project (Project) site in western Fresno County, California. This letter report describes methods and results of the surveys, which were conducted from February through July 2023.

1 Background

The Project site is located in the western portion of the San Joaquin Valley, approximately 11 miles east of Interstate 5 and 8 miles south of the City of Mendota in unincorporated Fresno County. The Project site is located within Sections 17, 18, and 19 of Township 15 South, Range 15 East, and Section 25 of Township 15 South, Range 14 East, as shown on the Cantua Creek, Coit Ranch, Levis, and Tranquility U.S. Geological Survey 7.5-minute quadrangles.

The Project site encompasses approximately 2,000 acres of agricultural lands and is bounded by agricultural fields in all directions, with State Route 33 immediately to the west (Figure 1, Project Location). West Adams Avenue extends along the northern boundary of the site, and West Manning Avenue extends along the southern boundary. In addition to a solar facility, the proposed Project also includes a 230-kilovolt (kV) generation tie (gen-tie) line that would connect the proposed solar facility to the existing Pacific Gas & Electric (PG&E) Tranquility Switching Station, southwest of the Project site (Figure 2, Project Site). The Tranquility Switching Station would be expanded to the north approximately 200 feet, increasing the size of the switching station by approximately 3 acres. The new 230 kV transmission line would extend from the Tranquility Switching Station to a point east of the existing substation near South Derrick Avenue. The PG&E transmission line would include approximately 1,900 feet of 230 kV conductor strung on approximately six new or existing tubular steel poles that would be approximately 140 feet high.

2 Methodology

Focused Swainson's hawk nesting surveys were conducted according to survey guidelines for the Central Valley population developed by the Swainson's Hawk Technical Advisory Committee (SHTAC 2000) and endorsed by the California Department of Fish and Wildlife (CDFW). In 2023, one survey was conducted in Period I (January through

March 20), three surveys were conducted in Period III (April 5 through April 20), and three surveys were conducted in Period V (June 10 through July 31). The guidelines recommend that surveys be conducted during a minimum of two of the five survey periods. Period I is considered an optional survey period during which Swainson's hawks may not be present. Table 1 summarizes the Swainson's hawk surveys conducted on the Project site in 2023.

Table 1. Summary of 2023 Swainson's Hawk Surveys

Date	Time	Survey Pass	Personnel	Weather Conditions
2/7/2023	0850–1149	Pass 1	Joshua McLaughlin	40°F–55°F, 10%–20% cloud cover, 0–5 mph winds
4/5/2023	1650–1936	Pass 2	Kelsey Higney	64°F–68°F, 60% cloud cover, 0–2 mph winds
4/6/2023	0650–1108	Pass 2	Kelsey Higney	49°F–67°F, 20%–60% cloud cover, 0–3 mph winds
4/12/2023	1602–1920	Pass 3	Alex Freeman	62°F–72°F, 20% cloud cover, 3–5 mph winds
4/13/2023	0620–1140	Pass 3	Alex Freeman	46°F, 20% cloud cover, 5 mph winds

4/18/2023	0633–1050	Pass 4	Erin Fisher-Colton	50°F–60°F, 40%–100% cloud cover, 0–8 mph winds
6/13/2023	1605–1928	Pass 5	Alex Freeman	87°F–90°F, 20%–30% cloud cover, 1–15 mph winds
6/14/2023	0555–1000	Pass 5	Alex Freeman	65°F–77°F, 10–30% cloud cover, 3–10 mph winds
6/27/2023	1556–2024	Pass 6	Erin Fisher-Colton	81°F–88°F, 20%–30% cloud cover, 0–6 mph winds
6/28/2023	0554–1202	Pass 6	Erin Fisher-Colton	58°F–85°F, 0%–10% cloud cover, 0–5 mph winds
7/11/2023	1635–2026	Pass 7	Kelsey Higney	89°F–96°F, 0% cloud cover, 0–7 mph winds
7/12/2023	0611–1005	Pass 7	Kelsey Higney	64°F–89°F, 0% cloud cover, 0–4 mph winds

During each survey, biologists visited suitable nest trees on and within approximately 0.5 miles of the Project site (including those identified during previous years' surveys). Where possible, trees or tree clusters were examined from multiple angles and for extended periods. Trees in which no nests were observed during early surveys were not prioritized during later surveys. Some areas where biologists did not have access to private roads (e.g., along West South Avenue and unnamed agricultural roads) received relatively limited coverage. Locations of any observed Swainson's hawks, suitable stick nest structures at which no activity was observed, or active nest structures were mapped in ArcGIS Field Maps. After active Swainson's hawk nests[1] were identified, surveyors continued to visit the site once per survey pass to note the stage of nesting.

[1] For the purposes of this report, an *active nest* refers to a nest structure where adult Swainson's hawks were observed nest-building, incubating, or feeding young (or young Swainson's hawks were observed in or adjacent to a nest structure) in 2023.

3 Results

Dudek biologists conducted seven survey visits from February 7 to July 12, 2023 (Table 1). Four Swainson's hawk nests were observed, and numerous individual Swainson's hawks were observed foraging on and in the vicinity of the Project site (Figure 3, 2023 Swainson's Hawk Observations). Three of these nests were previously used in 2022 (as discussed in the 2022 Swainson's Hawk Survey Summary [Dudek 2022]) and/or 2021 (as discussed in the Biological Resources Report [Dudek 2021]); previous nest labels are noted in parentheses.

Nest 1 (2022 Nest 3 [Dudek 2022]; SWHA-05 [Dudek 2021]). This nest is in a tamarisk (*Tamarisk* sp.) tree within the Project boundary on the eastern side of South Derrick Avenue, south of West Adams Avenue. The nest was determined active on April 5, 2023, when two adults were present. Adults were also seen in the vicinity of the nest during the subsequent survey pass on April 12 and 13. Incubation was confirmed on April 17 and 18, with a single adult sitting deep in the nest. By June 13, 2023, two nestlings were observed in the nest, with one adult attending multiple times during the observation period. On June 27 and 28, the young were observed in the process of fledging from the nest. Observed fledging behavior included perching on branches 1–3 feet from the nest, flapping and hovering in place on the nest and nearby branches, and a short flight from the nest tree to the ground over 100 feet from the nest tree. On July 11 and 12, both fledglings were able to fly on their own and spent time at the nest and in the vicinity.

Nest 2 (2022 Nest 2 [Dudek 2022]). This nest is in a tamarisk tree on the western side of South Derrick Avenue, north of West Manning Avenue, under a utility pole directly across from existing solar panels and approximately 475 feet northwest of the Project boundary. The nest was determined active on April 6, 2023, when surveyors observed a pair of adult Swainson's hawks copulating and nest-building. The pair was observed in the vicinity, but not actively nest-building, on April 12 and 13. Surveyors observed copulation and nest-building activity again during the subsequent survey pass on April 17 and 18. On June 13 and 14, 2023, an adult was observed on the nest, presumably incubating or brooding young hatchlings, although none were visible at that time. One nestling was visually confirmed on June 27 and 28. During the last survey pass on July 11 and 12, 2023, a single fledgling was observed making a short flight from the nest tree.

Nest 3 (2022 Nest 4 [Dudek 2022]). This nest is in a tamarisk tree within the Project boundary on the eastern side of Monterey Avenue, south of West Adams Avenue. A great-horned owl was observed in the area on April 5, 2023, but by April 13, a Swainson's hawk pair was observed in the vicinity. The nest was determined active on April 17 and 18, when surveyors observed the pair copulating and nest- building. On June 13 and 14, an adult was observed on the nest, presumably incubating or brooding young hatchlings, although none were visible. On June 27 and 28, two nestlings were present in the nest. No adults were seen visiting the nest, but nestlings had full crops, indicating regular feeding. During the last survey pass on July 11 and 12, 2023, only one nestling was observed. This nestling was developing flight feathers and appeared healthy.

Nest 4 (new nest in 2023). This nest is on a utility pole within the Project boundary on the south side of West Adams Avenue, approximately 600 feet west of the intersection with Monterey Avenue. The nest was constructed late in the season, and was first observed on June 13 and 14, with an adult female sitting in the nest, presumably incubating. A male was also observed in the vicinity and flying to the nest during this survey pass. During the subsequent survey pass on June 27 and 28, an adult was seen incubating or brooding on the nest and adding nest

material. At the last survey pass on July 11 and 12, a single downy nestling was observed. The nestling was able to stand and move about the nest and appeared healthy.

Swainson's hawks were observed foraging throughout the Project site and vicinity during 2023 nesting surveys. In mid-April 2023, many Swainson's hawks (approximately 10–15 individuals) were observed foraging within the agricultural and fallow fields west and southwest of the Project site, including an individual carrying nesting material. Representative photos from the 2023 Swainson's hawk survey efforts are provided in Attachment A.

4 Discussion

As discussed in the Biological Resources Report (Dudek 2021) and 2022 Swainson's Hawk Survey Summary (Dudek 2022), the Project site and immediate vicinity provides suitable nesting and foraging habitat for Swainson's hawk. Swainson's hawks have previously attempted to nest within or adjacent to the Project site in Nests 1, 2, and 3. Nest 1 was used in 2019, 2020, and 2022; of these, only the nest in 2022 was successful, producing at least one nestling. Nests 2 and 3 were used in 2022, but both nests failed. In 2023, all three previously used nests were successful. Nest 1 produced two fledglings, Nest 2 produced one fledgling, and Nest 3 produced at least one nestling. In addition, a new, late-season nest, Nest 4, produced one nestling.

5 Conclusion

Dudek biologists conducted Swainson's hawk nesting surveys on and within 0.5 mile of the Sonrisa Solar Park Project site over seven survey passes from February to July 2023. Four active Swainson's hawk nests were observed within or adjacent to the Project site. Combined, the four nesting pairs raised up to five young, including three fledglings and two nestlings. These observations confirm active nesting within the Project site according to the guidelines in the Staff Report Regarding Mitigation for Impacts to Swainson's Hawk (*Buteo swainsoni*) in the Central Valley, California (CDFG 1994). Swainson's hawks were also observed foraging at various locations immediately adjacent to the Project site, including at least one large group.

EXECUTIVE SUMMARY

The proposed Sonrisa Solar project is located approximately 8 miles south of the City of Mendota in unincorporated Fresno County in the San Joaquin Valley in central California. The solar generation site (project site) is bounded by West Lincoln Avenue to the north, South Merced Avenue to the east, West Manning Avenue to the south, and South Derrick Avenue (State Route 33) to the west. Specifically, the project site consists of an area approximately 1,700-acres in size.

The project area is generally undeveloped, with the exception of a few farm-related structures located near the central portion of the project area. The site is currently privately-owned and is being used for agricultural purposes. Elevations across the site range from approximately 190 feet above mean sea level (MSL) in the southwest portion of the site to approximately 160 feet above MSL in the northeast portion of the site.

Geologic and geotechnical constraints evaluated for the project include:

- Surface and near-surface soils at the project site are mapped as alluvial basin and fan deposits (Jennings and Strand, 1958). Fill materials associated with the construction of the existing roadways utilities as well as agricultural topsoil are also anticipated at the project. Geotechnical constraints related to soils at the project are:
    - *Soft Ground* – Areas with soft ground or loose soils can be found throughout the project.
    - *Expansive Soils* – The project soils are expected to have a moderate potential for expansion.
    - *Fill Soils* – Man-made fill soils placed without engineering supervision may be loosely or inadequately compacted, may contain oversize materials unsuitable for reuse in engineered fills, and may contain unsuitable organic or expansive materials and debris that may preclude their use in engineered fills.
- The closest known major active fault is the Great Valley 11 Fault, which is located approximately 8 miles west of the project. Geotechnical constraints related to faulting and seismic events at the project are:
    - *Ground Shaking* – The project has a moderate potential for strong ground motions due to earthquakes on nearby active faults.
    - *Liquefaction* – Fan or basin deposits (where shallow groundwater is present) may be subject to seismic settlement or liquefaction during a nearby seismic event.
- Shallow groundwater or perched water may occur beneath portions of the project site.
- The potential for landsliding at the project site is considered low.
- Dam inundation and significant flooding of the site are not considered to be significant hazards to the project site.
- Based on previous work in the general vicinity of the project area, the soils at the project site may be corrosive.

1. INTRODUCTION

In accordance with your request, Ninyo & Moore has completed a geologic reconnaissance for the proposed Sonrisa Solar project located in unincorporated Fresno County, California (Figure 1). Our evaluation is based on a geologic reconnaissance, published and non-published reports, aerial photographs, in-house data, and the assessment of the potential geologic hazards in the project area. The purpose of this geologic reconnaissance was to evaluate the potential for existing environmental impacts related to geologic or soils conditions to affect the project site and adjoining areas, and to discuss measures that can be implemented to reduce or mitigate the potential impacts with respect to the design and construction of the proposed project.

2. SCOPE OF SERVICES

Ninyo & Moore's scope of services for this geologic reconnaissance have included the activities listed below:

- Review of readily available regional, local, and site-specific geologic and geotechnical reports.
- Review of readily available background information including topographic, soils, mineral resources, geologic, and seismic and geologic hazard maps, and stereoscopic aerial photographs.
- Performance of a geologic reconnaissance of the site vicinity.
- Compilation and analysis of the data obtained from our background reviews and site reconnaissance.
- Preparation of this report presenting our findings, conclusions, and preliminary recommendations regarding potential geologic and soil impacts at the site. The findings were evaluated with respect to questions A through E listed in Section 6, "Geology and Soils" within Appendix G, "Environmental Checklist Form" of the "Guidelines for Implementation of the California Environmental Quality Act (CEQA)."

3. REGULATORY FRAMEWORK

Geologic resources and geotechnical hazards within the proposed project area are governed by the County of Fresno. The site is also governed by the regulations of the California Code of Regulations (CCR), 2016 California Building Code (CBC).

The CBC is promulgated under CCR, Title 24, Parts 1 through 12 (also known as the California Building Standards Code), and is administered by the California Building Standards Commission (CBSC). The CBSC is responsible for administering California's building codes.

4. SITE DESCRIPTION AND PROJECT DESCRIPTION

The site of the proposed Sonrisa Solar project is located approximately 8 miles south of the City of Mendota in unincorporated Fresno County in the San Joaquin Valley in central California. The project site is bounded by West Lincoln Avenue to the north, South Merced Avenue to the east, West Manning Avenue to the south, and South Derrick Avenue (State Route 33) to the west. Specifically, the project site consists of an area approximately 1,700-acres in size. Site elevations range from approximately 190 feet above mean sea level (MSL) in the southwest portion of the site to approximately 160 feet above MSL in the northeast portion of the site. The site is currently privately-owned and we understand it has been intermittently dry-farmed or lain fallow in recent years.

Based on our review of the project description contained in the Sonrisa Solar Park CUP Application and information provided to us by your offices, we understand that the project will consist of the development of a solar photovoltaic (PV) power generating project. Specifically, the project will consist of ground mounted single axis tracking arrays, battery storage components, and a 230 kV gen-tie line. To accommodate the Solar Facility and interconnect the Project's proposed 230 kV gen-tie line to the PG&E Switching Station, PG&E would complete improvements to its electrical facilities, including expansion of the existing Tranquillity Switching Station and construction of a new 230 kV transmission line. The Tranquility Switching Station would be expanded to the north approximately 200 feet, increasing the size of the switching station by approximately three acres, to accommodate a new bay for the Project as well as a potential additional bay to accommodate future projects. The switching station's electrical busbar (a conducting bar that carries heavy currents to supply several electric circuits) would not increase in size. The new 230 kV transmission line would extend from the Tranquillity Switching Station to a point located just east of the existing substation. The PG&E transmission line would include approximately 1,900 feet of 230 kV conductor strung on approximately six new or existing tubular steel poles that would be approximately 140 feet high.

5. GEOLOGIC AND SUBSURFACE CONDITIONS

Our findings regarding regional and site geology and groundwater conditions at the project site are provided in the following sections.

5.1. Regional Geologic Setting

The project area is situated in the southern portion of the Great Valley Geomorphic Province. This geomorphic province encompasses an area between the Sierra Nevada and Coastal Ranges that extends approximately 500 miles from the Transverse Ranges in the south to the Klamath Mountains and Cascades in the north (Norris and Webb, 1990). The province varies in width from approximately

30 to 70 miles. In general, the province consists of a relatively flat-floored valley consisting of alluvial materials overlying relatively undeformed Cenozoic sedimentary rocks, which in turn are underlain at depth by Sierran basement rocks.

Structurally, the Great Valley is an asymmetrical synclinal trough, bounded by the generally northwest-southeast trending Sierra Nevada Mountains on the east, and the Coast Ranges on the west. The trough is bisected by the Stockton Fault in the Stockton arch, and the White Wolf Fault, south of the Bakersfield arch. Other prominent structural features include the Kern Front Fault, north of Bakersfield, the Buena Vista thrust, on the east margin of the Coast Range, and Sutter Buttes, north of Sacramento. In addition, several valley fold structures, which are notable for their oil and gas reserves, are evident near the Great Valley and Coast Range boundary, including Elk Hills, Lost Hills, Buena Vista Hills, Kettleman Hills, McKittrick, and Wheeler Ridge. Significant fold structures have also been mapped near Sutter Buttes, Dunnigan, Lodi, Willows, and Rio Vista. Much of the structural deformation is thought to be the result of compression due to the bend in the active San Andreas Fault. North of the bend, major tectonic activity associated with this fault consists of primarily right-lateral, strike-slip movement. Further discussion of faulting relative to the site is provided in the Faulting and Seismicity section of this report and a map depicting faults in the site vicinity is presented on Figure 2.

5.2. Site Geology

Based on our review of published geologic maps and our site reconnaissance, surficial soils at the project site consist of fill, agricultural topsoil, and alluvium consisting of basin and fan deposits (Figure 3). A brief description of these units, as described in the cited literature or as observed on the site, is presented below.

5.2.1. Fill

Fill soils are anticipated to underlie portions of the site area due to previous land use, roadway construction, and burial of utility lines. As observed at the surface, the fill soils are generally composed of brown clay, silt, sand, and gravel.

5.2.2. Agricultural Topsoil

Agricultural topsoil mantles the site and is anticipated to be on the order of 1 to 2 feet in thickness. Where observed, these soils generally consist of brown and dark brown, silty fine to medium sand.

5.2.3. Basin Deposits

Quaternary-age basin-derived alluvial deposits of the Great Valley (Jennings and Strand, 1958) underlie the fill and agricultural topsoil at the site. These soils are generally anticipated to consist of light brown to dark brown, clay, silt, and sand.

5.2.4. Fan Deposits

Quaternary-age fan-derived alluvial deposits of the Great Valley (Jennings and Strand, 1958) underlie the fill and agricultural topsoil in the western portion of the site. These soils are generally anticipated to consist of light brown to dark brown, clay, silt, sand, and gravel.

5.3. Groundwater

Sources provided by the California Water Data Library Resources (DWR) and the California State Water Resources Control Board (SWRCB) were reviewed for information pertaining to groundwater quality and occurrence in the vicinity of the project. According to the SWRCB Water Quality Control Plan for the San Joaquin Hydrologic Basin, the project is located within the Westlands Hydrologic Area in the South Valley Floor Hydrologic Unit.

We researched information on the SWRCB GeoTracker (GeoTracker, 2020) website for groundwater monitoring well data in the vicinity of the project site and the California Department of Water Resources Water Data Library Website (CDWR, 2020). Numerous irrigation and observation wells are located around the project site. The depth to groundwater has been measured in the irrigation wells at depths of 40 to 236 feet (CDWR, 2020). However, measurements taken in observation wells indicate perched zones of groundwater depths of 3 to 15 feet (Krazan & Associates, 2002). Potential beneficial uses of groundwater have been designated for agricultural purposes.

6. GEOLOGIC HAZARDS

In general, potential geologic hazards at the site include faulting and seismicity as they relate to seismic design of structures. These considerations and other geologic hazards such as liquefaction, landsliding, slope failure, and tsunamis, are discussed in the following sections.

6.1. Faulting and Seismicity

As shown on Figure 2, there are several active faults in the region. Therefore, like most of southern California, the project area is considered to be seismically active. The closest known active fault is the Great Valley 11 Fault, which is capable of generating an earthquake magnitude of 6.6 (California Geological Survey [CGS], 2016c). The Great Valley 11 Fault is located approximately 8 miles west of the site.

6.2. Ground Rupture

Ground surface rupture due to active faulting is not considered likely in the project area due to the absence of known active faults underlying the site. However, lurching or cracking of the ground surface as a result of nearby seismic events is possible.

6.3. Ground Motion

The 2018 California Building Code (CBC) specifies that the Risk-Targeted, Maximum Considered Earthquake (MCE_R) ground motion response accelerations be used to evaluate seismic loads for design of buildings and other structures. The M_{CER} ground motion response accelerations are based on the spectral response accelerations for 5 percent damping in the direction of maximum horizontal response and incorporate a target risk for structural collapse equivalent to 1 percent in 50 years with deterministic limits for near-source effects. The horizontal peak ground acceleration (PGA) that corresponds to the MCE_R for the site was calculated as 0.468g using the Structural Engineers Association of California (SEAOC/OSHPD, 2020) seismic design tool (web-based).

The 2018 CBC specifies that the potential for liquefaction and soil strength loss be evaluated, where applicable, for the Maximum Considered Earthquake Geometric Mean (MCE_G) peak ground acceleration with adjustment for site class effects in accordance with the American Society of Civil Engineers (ASCE) 7-16 Standard. The MCE_G peak ground acceleration is based on the geometric mean peak ground acceleration with a 2 percent probability of exceedance in 50 years. The MCE_G peak ground acceleration with adjustment for site class effects (PGA_M) was calculated as 0.53g using the SEAOC (SEAOC/OSHPD, 2020) seismic design tool that yielded a mapped M_{CEG} peak ground acceleration of 0.469g for the site and a site coefficient (F_{PGA}) of 1.131 for Site Class D.

6.4. Liquefaction and Seismically Induced Settlement

Liquefaction of cohesionless soils can be caused by strong vibratory motion due to earthquakes. Research and historical data indicate that loose granular soils and non-plastic silts that are saturated by a relatively shallow groundwater table are susceptible to liquefaction. Based on the anticipated shallow water table and presence of loose, unconsolidated alluvial deposits, there may be a potential for liquefaction. Therefore, liquefaction may be a design consideration. It is the responsibility of the geotechnical engineer of record to verify the potential for liquefaction and dynamic settlement and to provide appropriate design recommendations.

6.5. Landsliding and Slope Failure

Landslides were not observed at or around the site during our site reconnaissance, and landslides are not mapped at the site. Based on this information, landslides are not a design consideration.

Based on our background review and our field evaluation, the project area is located in a relatively flat-lying region and slope failure is not a design consideration.

6.6. Tsunamis and Seiches

Tsunamis are long wavelength seismic sea waves (long compared to the ocean depth) generated by sudden movements of the ocean bottom during submarine earthquakes, landslides, or volcanic activity. Based on the inland location and elevation of the project, the potential for a tsunami to impact the site is not a design consideration.

Seiches are oscillations of enclosed or partially enclosed bodies of water often generated by seismic activity. Based on the elevation of the site and the absence of nearby bodies of water, the potential for seiches to impact the site is considered low.

6.7. Regional Land Subsidence

Land subsidence is characterized as a shrinking of the ground surface relative to surrounding areas, and can generally occur where deep alluvial deposits are present in valley areas. Subsidence in alluvial valley areas is typically associated with groundwater withdrawal or other fluid withdrawal from the subsurface such as oil and/or natural gas. Extraction of these geologic fluids can cause subsidence, which can result in the development of surface ground cracks and fissures, particularly near valley margins. Cracks and earth fissures can cause damage to improvements including roads, transmission lines, foundations, structures, and pipelines. Review of the USGS report “Land Subsidence along the Delta-Mendota Canal in the Northern Part of the San Joaquin Valley” prepared

in 2013, indicates that widespread land subsidence occurred in the region from 1926 to 1970 as a result of groundwater withdrawal. Measurements within the Mendota area indicate that 2.4 to 4.9 meters of land subsidence has occurred between 1926 and 1970. Current monitoring indicates that 25 millimeters of land subsidence occurred in the region between 2008 and 2010 (USGS, 2016).

During our site reconnaissance, we did not observe ground cracks or earth fissures. We note however, that the site generally consists of plowed agricultural fields that may conceal underlying cracks or fissures.

6.8. Flood Hazards

Based on review of Federal Emergency Management Agency (FEMA) Mapping Information Platform website (2020), the project site is not located within mapped 100 or 500-year floodways. Based on review of the flood maps and the elevation of the site, the potential for significant flooding to impact the project is not a project constraint. In addition, the potential for dam inundation is not considered a project constraint for the same reasons.

6.9. Expansive Soils

Expansive soils generally result from specific clay minerals that have the capacity to shrink or swell in response to changes in moisture content. Shrinking or swelling of foundation soils can lead to damage to slabs, foundations, and other engineered structures, including tilting and cracking. Clayey fill and agricultural soils may be expansive. Additionally, the fan deposits may contain lenses of clay, which can be expansive. In general, the soils and earth materials at the project may be expected to have a moderate potential for expansion.

6.10. Corrosive Soils

Caltrans corrosion (2015) criteria define as soils with more than 500 parts per million (ppm) chlorides, more than 0.2 percent sulfates, or a pH less than 5.5. Based on the preliminary-level geotechnical report for the site (Terracon, 2015), site soils can be classified as corrosive. Additionally, based on laboratory testing performed on soil samples from Ninyo & Moore projects near the project area and Caltrans corrosion (2015) criteria, soils in the general vicinity of the project site have been classified as corrosive. The potential for similar soils to occur at the project is considered high.

6.11. Soils

Based on the interactive map using the Web Soil Survey website (USDA, 2020), three different soil units have been noted on the project site. These soils types include: Tranquility Clay, Ciervo Clay and Calflax Clay Loam. Based on the previous agricultural site use and the surrounding paved and unpaved roadways, preexisting native soils are anticipated to have been removed and/or disturbed on the project site.

6.12. Mineral Resources

According to the Fresno County General Plan Background Report (2000) the project area is not located within a mineral resource location.

7. CONCLUSIONS

Based on our review of the referenced background data and our geologic field reconnaissance it is our opinion that geologic and geotechnical considerations at the project site include the following:

- Surface and near-surface soils at the project are mapped as alluvial basin and fan deposits. Fill materials associated with the construction of the existing roadways and utilities and agricultural topsoil associated with the site's previous use as farmland are also anticipated to be present at the project site. Geotechnical constraints related to soils at the project are:
  - *Soft Ground* – Areas with soft ground or loose soils can be found in areas underlain by existing fill and agricultural topsoil.
  - *Expansive Soils* – The project soils are expected to have a moderate potential for expansion.
  - *Fill Soils* – Man-made fill soils placed without engineering supervision may be loosely or inadequately compacted, may contain oversize materials unsuitable for reuse in engineered fills, and may contain unsuitable organic or expansive materials and debris that may preclude their use in engineered fills.
- Shallow groundwater or perched water may occur beneath portions of the project.
- The closest known major active fault is the Great Valley 11 Fault, which is located approximately 8 miles west of the project. Geotechnical constraints related to faulting and seismic events at the project are:
  - *Ground Shaking* – The project has a moderate potential for strong ground motions due to earthquakes on nearby active faults.
  - *Liquefaction* – Basin and fan deposits may be subject to seismic settlement and/or liquefaction during a nearby seismic event.
- The potential for landsliding in the project area is considered low.
- Significant flooding or dam inundation are not considered design constraints.

- Based on previous work in the project area, some soils at the project site may be expansive and corrosive.
- The conditions described above would increase the cost and duration of grading and construction of the project, but would not preclude development of the project.

8. RECOMMENDATIONS

Based on the geologic and geotechnical considerations at the project site presented in the previous section, our general recommendations are presented below. These recommendations assume that further geotechnical evaluation, including subsurface evaluation and laboratory testing, will be conducted prior to finalization of project plans and that specific recommendations will be provided at that time.

Soft Ground – Soils in areas with soft ground or loose soils in the area of the proposed project may be subject to settlement. Recommendations to mitigate this condition can typically include removal and/or replacement of soils as engineered compacted fill. The extent of soft soils and recommended removals may be evaluated by subsurface exploration and laboratory testing.

Land subsidence – Land subsidence may cause ground cracks or earth fissures which may lead to damage to foundations and engineered structures. The proposed structures should be designed to accommodate vertical movement associated with long-term ground subsidence. The PV structures can also be provided with mechanisms so they can be readily realigned in response to subsidence as needed.

Expansive Soils – Expansive soils may lead to damage to foundations and engineered structures. If expansive soils exist on site, the following recommendations may be implemented during construction: the soils may be removed from sensitive areas and placed in deeper fill areas; the soils may be excavated and removed from the site; or the expansive soils may be treated (i.e., lime treatment) to mitigate their potential for expansion. The extent of expansive soils and recommended mitigation measures may be evaluated by subsurface exploration and laboratory testing.

Ground Shaking – Proposed structures should be designed appropriately to mitigate strong ground shaking in the event of an earthquake on a nearby fault.

Liquefaction – The site may be considered susceptible to liquefaction and dynamic settlement based on the measured shallow groundwater in a nearby groundwater monitoring well and groundwater depths encountered in borings. Prior to development, a geotechnical evaluation involving subsurface exploration and laboratory testing should be performed to specifically evaluate the potential for liquefaction on the project site. If such an evaluation finds that a potential for liquefaction to exist, the following recommendations may be implemented during construction: removal and replacement of soils susceptible to seismic settlement and/or liquefaction; densification of these soils; or utilization of special foundations to mitigate liquefaction and seismic settlement.

Shallow groundwater – Shoring and dewatering may be required if construction is proposed in areas of shallow groundwater.

Landsliding – Landslides have not been mapped on the site or reported in the available literature. Further, no landslides were observed on or adjacent to the site during our field reconnaissance.

Corrosive Soils – If corrosive soils exist on the site, a corrosion engineer may be required to assist in the design of improvements in contact with the soil. The extent of corrosive soils and recommended mitigation measures may be further evaluated by subsurface exploration and laboratory testing.

9. IMPACT ANALYSIS

Based upon the results of our geologic reconnaissance, our findings, conclusions, and recommendations regarding potential geological impacts to the Sonrisa Solar Project are summarized in the following sections.

9.1. Significance Thresholds

In evaluating the significance of potential environmental concerns in a particular study area, the criteria to consider, as they relate to geologic and soil conditions, are presented in the CEQA Guidelines. In accordance with the scope of work, the findings of this study were evaluated with respect to Questions A through E of Section 6 “Geology and Soils” with in Appendix G of the CEQA Guidelines (2009).

9.2. Project Impacts and Significance

Based on the above criteria and the results of the evaluation, the potential impact by geologic and soil conditions at the project have been identified, and are discussed below.

A. Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of known fault?

The potential for ground surface rupture due to active faulting is considered low in the project area due to the absence of known active faults underlying the site (less than significant impact). However, lurching or cracking of the ground surface as a result of nearby seismic events is possible.

ii. Strong seismic ground shaking?

The project has a moderate potential for strong ground motions due to earthquakes on nearby active faults (less than significant impact with mitigation incorporated).

iii. Seismic related ground failure, including liquefaction?

Based on the shallow groundwater measured in a nearby well, it is our opinion that the potential for liquefaction over the majority of the project site is a design consideration and should be evaluated further. However, we consider this impact to be less than significant with mitigation incorporated.

iv. Landslides?

Geologic mapping does not indicate the presence of mapped landslides on the project site. Additionally, landslides were not observed on or adjacent to the project. Therefore, the potential for existing landslides is considered low (less than significant impact).

B. Would the project result in substantial soil erosion or the loss of topsoil?

If the site is developed in accordance with current building codes and industry standards, the potential for substantial soil erosion is considered to be low (less than significant impact). The potential for substantial loss of topsoil due to the proposed development is considered low due to the previous agricultural use of the site.

C. Would the project be located on geologic unit or soil that is unstable or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

The basin and fan deposits underlying the site may be subject to seismic settlement or liquefaction during a nearby seismic event. The site is not considered prone to landsliding or slope instability issues. Based on these items, we consider this impact to be less than significant with mitigation incorporated. Land subsidence may cause ground cracks or earth fissures which may lead to damage to foundations and engineered structures. The proposed structures should be designed to accommodate vertical movement associated with long-term ground subsidence.

D. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

The soils on the project site are expected to have a moderate to high potential for expansion. However, we consider this impact to be less than significant with mitigation incorporated.

E. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

The soils on the project site are expected to be able to support adequately designed septic tanks or alternative waste water disposal systems. We consider this impact to be less than significant with mitigation incorporated.

10. LIMITATIONS

The field evaluation and geotechnical analyses presented in this report have been conducted in accordance with current engineering practice and the standard of care exercised by reputable geotechnical consultants performing similar tasks in this area. No warranty, implied or expressed, is made regarding the conclusions, recommendations, and professional opinions expressed in this report. Variations may exist and conditions not observed or described in this report may be encountered. Our preliminary conclusions and recommendations area based on an analysis of the observed conditions and the referenced background information.

The purpose of this study was to evaluate geologic and geotechnical conditions within the project site and to provide a preliminary geotechnical evaluation report to assist in the preparation of environmental impact documents for the project. A comprehensive geotechnical evaluation, including subsurface exploration and laboratory testing, should be performed prior to design and construction of structural improvements.

MEMORANDUM

To:	Jon VanDerZee, EDP Renewables North America, LLC.
From:	Sarah Siren, M.S., GISP
Subject:	Paleontological Resources Review – Sonrisa Solar Park Project
Date:	4/9/20 (*revised 11/30/20*)
cc:	Erlin Worthington, Dudek
Attachment(s):	Paleontological Records Search Results Letter

Dudek is providing this memo after completing a review of the potential for impacts to paleontological resources during construction activities for the Sonrisa Solar Park Project (Project), a proposed solar photovoltaic (PV) project. The project area is located west of Highway 99 and east of the Golden State Freeway (Interstate 5) near Mendota in Fresno County (or County), California. The project also includes a generation transmission line and upgrades to the Tranquillity Switching Station located approximately one mile southwest of the project, on West Dinuba Avenue between South Ohio Avenue and South Derrick Avenue. The project area is underlain by mapped deposits of Quaternary alluvium (Smith, 1974). Based on the records search results obtained from the Natural History Museum of Los Angeles County, or LACM, Pleistocene age older Quaternary deposits are known to produce scientifically significant paleontological resources elsewhere in Fresno County (McLeod 2020).

Surficial deposits in this area consist of younger alluvium (Holocene; map units Qf and Qs) and older marine and nonmarine terrace deposits (Pleistocene; map units Qc, Qm, and Qt) (Smith, 1974). Younger alluvial deposits in this area are generally derived as gentle fan deposits from the Ciervo Hills to the southwest (McLeod 2020). In the eastern portion of the project area, basinal deposits are derived from the Sierra Nevada drainages (McLeod 2020). Surficial, Holocene age (< 11,700 years old) alluvial deposits are relatively young and have a low paleontological resource sensitivity, whereas Pleistocene age (2.58 million to 11,700 years old) alluvial deposits have a high paleontological resource sensitivity due to their potential to yield significant resources (McLeod 2020). Topsoil and colluvium have a low paleontological sensitivity due to their young age. Any fossil material found in these deposits are ex-situ (having been transported from nearby, older deposits) and would not be considered scientifically significant or unique. However, older, Pleistocene age alluvial deposits are known to produce scientifically significant paleontological resources.

Dudek requested a paleontological records search from the Natural History Museum of Los Angeles County on January 22, 2020, and we received a response on February 5, 2020. According to the records search, the LACM reported no paleontological localities within the project area or a one-mile radius buffer (McLeod 2020). The closest locality is LACM 7254 located on the south side of Ash Slough, northeast of Chowchilla. This locality produced a fossil specimen of elephantoid (Proboscidea, e.g. mammoths and mastodons). Their next closest locality is LACM 7844-7845, located south-southeast of the project area, on the south side of Bluestone Ridge and northwest of Keck's Corner, near the mouth of Antelope Valley, specimens of iguanid lizard (Iguanidae), common snakes (Colubridae), bird (Aves), rabbits (*Lepus* and *Sylvilagus*), pocket gopher (*Thomomys*), pocket mouse (*Perognathus*),

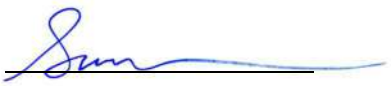
kangaroo rat (*Dipodomys*), and deer (*Odocoileus*) were recovered. West of those localities, along the Salinas River between Paso Robles and San Miguel, locality LACM 5939 yielded a fossil specimen of horse (*Equus*) (see Attachment).

No paleontological resources were identified within the project, generation transmission line, or interconnection area as a result of the institutional records search and desktop geological review. However, intact paleontological resources may be encountered below a surficial layer of topsoil during excavation into previously undisturbed alluvial deposits of Pleistocene age. Given the proximity of past fossil discoveries in the area and the underlying paleontologically sensitive deposits, the project area has the potential to yield scientifically significant paleontological resources. In the event that intact paleontological resources are located on the project area, ground-disturbing activities associated with construction of the project, such as grading and trenching, have the potential to destroy a unique paleontological resource or locality. Without mitigation, the potential damage to paleontological resources during construction would be a potentially significant impact. However, upon implementation of Mitigation Measure (MM)-GEO-1, impacts would be reduced to below a level of significance. Impacts of the project are considered less than significant with mitigation incorporated during construction. No further mitigation is required.

> **MM-GEO-1** Prior to commencement of any grading activity on-site, the applicant shall retain a paleontologist who meets the industry standard of Qualified Paleontologist to serve as Paleontological Principal Investigator, as per the criteria established by industry best practices (e.g., SVP 2010 and Murphey et al. 2019), subject to the review and approval of the County. The paleontologist shall prepare a Paleontological Resources Impact Mitigation Program (PRIMP) for the proposed project. The PRIMP shall be consistent with the guidelines of the Society of Vertebrate Paleontology (SVP) (2010). The paleontologist shall also attend the preconstruction meeting. A field paleontologist (or monitor) who meets the industry standard of Qualified Field Paleontologist, as per the criteria established by industry best practices (e.g., SVP 2010 and Murphey et al. 2019) shall spot check grading below a depth of ten feet and full time during other significant ground-disturbing activities in previously undisturbed older alluvium of Pleistocene age, if encountered. However, driving of steel piles does not require excavation, and ground disturbance associated with site preparation will likely be minimal (i.e., extending to no more than 5 feet below existing surface grade). In the event that paleontological resources (e.g., fossils) are unearthed during grading, the paleontological monitor will temporarily halt and/or divert grading activity to allow recovery of paleontological resources. The area of discovery will be roped off with a 50-foot radius buffer. Once documentation and collection of the find is completed, the monitor will remove the rope and allow grading to recommence in the area of the find.

If you have any questions regarding this memo, please feel free to contact me (760.846.9326 or ssiren@dudek.com).

Sincerely,



Sarah A. Siren, M.S., GISP

Senior Paleontologist

Attn: Sarah Siren, Senior Paleontologist

re: Vertebrate Paleontology Records Check for paleontological resources for the proposed Sonrisa Solar Park Project, Dudek Project # 11849, near Mendota, Fresno County, project area

Dear Sarah:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for the proposed Sonrisa Solar Park Project, Dudek Project # 11849, near Mendota, Fresno County, project area as outlined on the portions of the Coit Ranch, Tranquility, Levis, and Cantua Creek USGS topographic quadrangle maps that you sent to me via e-mail on 22 January 2020. We have no vertebrate fossil localities that lie directly within the proposed project area, but we do have localities, albeit at some distance, from sedimentary deposits similar to those that occur at depth within the proposed project area.

The entire proposed project area has surficial deposits composed of younger Quaternary Alluvium, derived broadly as gentle fan deposits from the Ciervo Hills to the southwest and, in the eastern portion of the proposed project area, as basinal deposits with contributions from the Sierra Nevada drainages. These deposits typically do not contain significant vertebrate fossils, at least in the uppermost layers, and we have no vertebrate fossil localities nearby from these deposits, but at modest depth older Quaternary deposits may well contain significant fossil vertebrate remains. Our closest vertebrate fossil locality to the proposed project area from similar deposits is LACM 7254, quite some distance north-northeast of the proposed project area immediately northeast of Chowchilla on the south side of Ash Slough, that produced a fossil specimen of elephantoid, Proboscidea.

Our next closest vertebrate fossil localities from somewhat similar deposits are LACM 7844-7845, south-southeast of the proposed project area on the south side of Bluestone Ridge near the mouth of Antelope Valley and northwest of Keck's Corner, that produced fossil specimens of iguanid lizard, Iguanidae, common snakes, Colubridae, bird, Aves, rabbits, *Lepus* and *Sylvilagus*, pocket gopher, *Thomomys*, pocket mouse, *Perognathus*, kangaroo rat, *Dipodomys*, and deer, *Odocoileus*. Almost due west of localities LACM 7844-7845, along the Salinas River between Paso Robles and San Miguel, our vertebrate fossil locality LACM 5939 produced a fossil specimen of horse, *Equus*.

Shallow excavations in the younger Quaternary Alluvium deposits exposed in the proposed project area probably will not uncover significant vertebrate fossils. Deeper excavations that extend down into older Quaternary deposits, however, may well encounter significant fossil vertebrate remains. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains discovered while not impeding development. It is recommended that sediment samples be collected and processed to determine the small fossil potential in any areas of substantial excavations. Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

Samuel A. McLeod

Re: Phase I Environmental Site Assessment for the Sonrisa Solar Site, located in Central California.

Dear Ryan,

KTA Associates, Inc. is pleased to provide the Phase I Environmental Site Assessment for the Sonrisa Solar Site, located in Central California. If you have any questions, please do not hesitate to contact me. We very much appreciate the opportunity to support you and EDP Renewables North America, LLC with this important matter.

Sincerely,
KTA Associates, Inc.

1.0 INTRODUCTION

1.1 PURPOSE

This report represents the findings of a Phase I Environmental Site Assessment ("ESA") for the Sonrisa Solar Site located in Central California (hereinafter referred to as the "Site"). The specific location of the Site is further described in Section 1.4, Scope of Activity. The objective of this Phase I ESA is to identify and characterize obvious or potential environmental concerns that may exist on the Site. To accomplish these objectives, a Phase I ESA was performed focusing on a review of: (1) information disclosed by the landowner, (2) current and historical Site uses, (3) surrounding property use, (4) environmental regulatory records and (5) Site visit.

1.2 SPECIAL TERMS AND CONDITIONS

This report documents and summarizes work performed to fulfill tasks described in the Statement of Work agreed to by EDP Renewables North America LLC (EDPR) and KTA Associates, Inc. (KTA) on February 27, 2019 (herein referred to as the "SOW"). The SOW includes the development of a Phase I ESA in accordance with the American Society for Testing and Materials (ASTM) Standard E1527-13 (herein referred to as the "ASTM Standard") for Phase I ESAs. A Phase I ESA developed in accordance with the ASTM Standard is intended to permit a user to satisfy one of the requirements to qualify for "innocent landowner" defense to Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability. However, while KTA has conducted this Phase I ESA consistent with standard industry care, KTA makes no claims, warranties, or guarantees regarding this environmental review. The performance of services by KTA is governed by the terms in the SOW.

1.3 LIMITATIONS AND EXCEPTIONS

This report is based upon the application of scientific principles and professional judgment to certain facts with resulting subjective interpretations. Professional judgments expressed herein are based upon the facts currently available within the limits of the existing data, scope of work, budget, and schedule. To the extent that more definitive conclusions are desired by the client than are warranted by the currently available facts, it is specifically KTA's intent that the conclusions and recommendations stated herein will be intended as guidance and not necessarily a firm course of action except where explicitly stated as such. WE MAKE NO WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES AS TO MERCHANTABILITY OR FITNESS OF THE SITE FOR A PARTICULAR PURPOSE. Information provided in this report is not to be construed as legal advice.

1.4 SCOPE OF ACTIVITY

The Scope of Activity for this project is presented in the SOW. The Scope of Activity includes the development of a Phase I ESA. The Site subject to this Phase I ESA includes the parcels identified both on the Site Map included in Appendix A - Figure A-1 and the Property Summary Report in Appendix C.

The Phase I ESA developed under this SOW has been performed consistent with established protocols in the ASTM Standard for Phase I ESAs. The focus of the Phase I ESA is to determine whether RECs exist on the Site. RECs are defined in the ASTM Standard as:

"Recognized Environmental Conditions indicate the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. ***The term is not intended to include deminimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be deminimis are not recognized environmental conditions.****"*

The key to this definition is the portion included above in bold. Specifically, the properties KTA has identified as not having RECs are those that likely would not be subject to an enforcement order to conduct additional investigation or cleanup if viewed by the U.S. Environmental Protection Agency (USEPA) or more likely the California Environmental Protection Agency.

2.0 SITE DESCRIPTION

2.1 LOCATION

The Site location is approximately 95 miles southeast of San Jose, CA and 46 miles south of Merced, CA. The general location of the Site is shown in Figure 1. The Site is in Fresno County between US Interstate 5 and Highway 33. A more detailed map of the Site is included on the Site Map in Appendix A – Figure A-1. The Site is composed of approximately 1,690 acres.

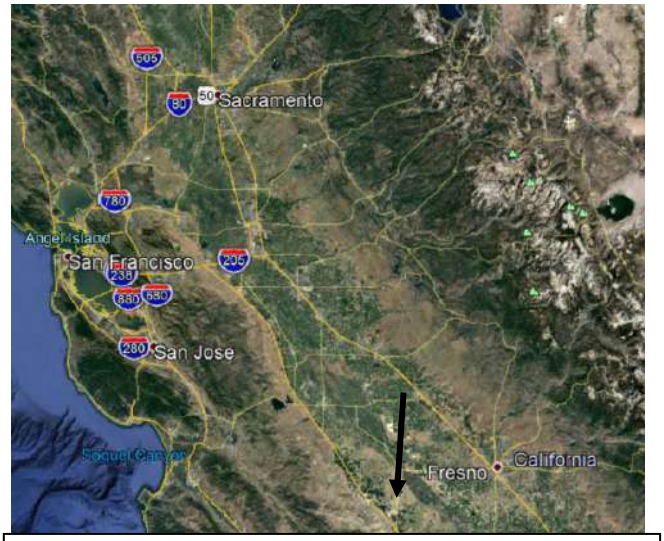

Figure 1 – General Site Location

2.2 SITE AND VICINITY CHARACTERISTICS

The Site is located in the San Joaquin Valley, often referred to as the "food basket of the World" for its vast farming production. The Site predominantly consists of grazing land. Current and historic uses of the Site, as describe below in Section 2. 6, are primarily agricultural.

The Site is approximately 180 feet above sea level (with very little variation). The Site is in the base of the San Joaquin Valley which is bound by the Diablo Mountain Range to the west and the Sierra Nevada Mountain Range to the east. Figure 2 includes a representative picture of the Site.

Figure 2 – Representative Picture of the Site

Over 700,000 years ago, the San Joaquin Valley was largely filled with a freshwater lake. The soil on the Site is largely made up of sediments and clay resulting from the presence of the lake. The soil has limited water infiltration rates. This limited water infiltration rate results in ideal crop growing conditions. Groundwater exists at shallow depths. However, federal regulations have precluded the use of groundwater from shallow aquifers. As a result, irrigation water is typically obtained from depths several hundred feet below the ground surface. The limits placed on shallow aquifer groundwater production and groundwater production in general are likely the most significant challenges facing agricultural farmers in the San Joaquin Valley. This is a hotly debated discussion for property owners close to the Site.

Further geology, soil, surface water and groundwater information is presented in the EDR Regulatory Radius Map Report included in Appendix D.

2.3 INFORMATION REPORTED BY LANDOWNERS REGARDING ENVIRONMENTAL LIENS OR SPECIALIZED KNOWLEDGE OF ENVIRONMENTAL ISSUES

To provide compliance with the ASTM Standard, interviews must be conducted with the landowners. The landowner for all the parcels making up the Site is the Westlands Water District as outlined in the Property Summary Report in Appendix C. Mr. Martin Griesse-Nascimento of KTA contacted and interviewed Katarina Campbell, the Westland Water District's Supervisor of Resources. He asked the following questions:

- Question #1 – Are you aware of any liens or legal actions against the Site property that could result in a future environmental cleanup?
- Question #2 – Are you aware of any spills of hazardous materials which have occurred on the Site that could result in a future environmental cleanup?
- Question #3 – Are you aware of any other environmental contamination issues within the Site, including landfills or mining activities?
- Question #4 – Are you aware of any environmental contamination or activities that might require a cleanup on any neighboring properties?

Ms. Campbell had the following responses to the four questions above, in the order the questions are presented: (1) no, (2), no, (3) no, and (4) no. A summary of the interview responses is provided in the Property Summary Report in Appendix C. No RECs were identified during the interview process.

2.4 INFORMATION REPORTED BY USERS OF THE ESA

The user of this Phase I ESA is EDPR. Mr. Sam Alexander represents EDPR for this project. Mr. Griesse-Nascimento contacted Mr. Alexander and asked the four following questions:

- Are you aware of specialized knowledge of the Site's environmental condition as it relates to potential contamination?
- Are you aware of any activity use limitations recorded in title documents or liens related to the Site, based on environmental contamination?
- Are you aware of commonly known information regarding the Site's environmental condition as it relates to potential contamination?
- Are the potential purchase or lease costs related to the Site discounted due to the presence of environmental contamination?

Mr. Alexander had the following responses to the questions above, in the order the questions are presented: (1) no, to the best of my knowledge, (2) no, to the best of my knowledge, (3) no, to the best of my knowledge and (4) no.

2.5 INFORMATION REPORTED BY LOCAL AGENCIES

Mr. Martin Griesse-Nascimento contacted the California Regional Water Quality Control Board, Region V (RWQCB) and spoke with Mr. Greg Issinghoff. Mr. Issinghoff is the case manager for environmental cleanup matters in the general area the Site is located. He reviewed the location of the Site with the RWQCB's GeoTracker website and determined that no releases of hazardous substances or petroleum have been reported on the Site. Mr. Issinghoff did indicate that there are two facilities located adjacent to the Site which potentially pose an environment risk to the Site. These facilities included the Britz Fertilizers facility (located north of APN 02807104ST) and the Westlands Water District Facility (located north of APN 02807101ST).

Figure 3 – Water Well

Figure 4 – Solar Farm adjacent to the Southwestern Portion of the Site

In 2002, soil and groundwater contaminated with diesel was remediated at the Britz Fertilizers facility. The remedial action was performed under the guidance of the RWQCB. On January 17, 2003, the RWQCB provided the Britz Fertilizers facility with a letter indicating that no further remedial action was necessary, and the case was subsequently closed.

In 1995, soil and groundwater contaminated with gasoline due to a leaking underground storage tank was found at Westlands Water District Facility. Remediation and monitoring of the contamination were performed under the guidance of the RWQCB. On May 20, 1998, the RWQCB provided a letter indicating that no further remedial action was necessary, and the case was subsequently closed.

2.6 CURRENT USE INFORMATION

At present, the property is primarily used as agricultural land. This includes undeveloped grazing land. According to the landowners, the Site is used for dry farming with no irrigation systems. There are no improvements or structures located on the Site. There are two utility lines intersecting the central portions of the Site. There are three groundwater wells on the Site, all powered with electricity. One of these water wells is shown in Figure 3.

2.7 SURROUNDING PROPERTIES

Beyond the facilities adjacent to the Site discussed in Section 2.5, the use of property immediately adjacent to the Site is the same as on the Site with one exception. The exception is a fenced solar farm adjacent to the southwestern portion of the Site as shown in Figure 4.

2.8 HISTORICAL USE INFORMATION

Historical use of the Site appears to be the same as the current use. Additional third-party information has been obtained to evaluate historical uses on the Site. This information is discussed in the following sections.

2.8.1 Aerial Photograph Review

Current and historical aerial photographs are provided in Appendix B. There is no evidence on the aerial photographs that suggests historic site use is different from current site use with two exceptions:

- Prior to 2005, there appears to have been a structure located on the western portion of the Site on APN 02807101ST.

- Prior to 1998, there appears to have been a structure located on the central portion of the Site on APN 02807106ST.

Mr. Martin Griesse-Nascimento of KTA contacted the landowner for the parcels where the structures were previously located, the Westlands Water District, and spoke with Mr. Alex Young, the District's Associate Resources Analyst. Mr. Young indicated that the structure on the western portion of the Site (parcel APN 02807101ST) was a residence which was removed in late 2004 and the structure on the central portion of the Site (parcel APN 02807101ST) was a barn with grain silos which was demolished prior to the Westlands Water District purchasing the land. Mr. Young was not aware of there being any significant amount hazardous materials or petroleum products stored in either of the structures that would impact the Site.

No RECs were identified as a report of the aerial photograph review.

2.8.2 Historical Sanborn Maps Review

Sanborn Fire Insurance Maps were requested from EDR. Based on EDR's search, Sanborn Fire Insurance Maps were not available. This is expected given the Site's rural location. EDR has provided a certification of the search, which is included in Appendix B.

2.8.3 Historical Mineral and Petroleum Production Report

Information regarding Mineral and Petroleum Production on the Site is provided in Appendix F. No RECs were identified in association with Mining and Petroleum Production on the Site.

2.8.4 Title Reports

At the time this Phase I ESA was developed, title reports for the properties that make up the Site were unavailable. To provide compliance with the ASTM Practice E1527-13 standard, the title

reports for these properties are to be reviewed. Given the other reviews conducted as part of this Phase I ESA, this exception is insignificant and is unlikely to have any impact on the findings.

3.0 ENVIRONMENTAL RECORDS REVIEW

3.1 REGULATORY AGENCY DATABASE LIST REVIEW

This section describes the results of the regulatory agency database review for sites of concern (SOCs) done by Environmental Data Resources, Inc. (EDR). EDR is a firm that acquires data from government agencies. The purpose of the regulatory agency database review is to screen for potential sources of contamination or activities of environmental concern for the Site and adjacent properties. The agency published databases were screened for sites of potential concern in accordance with the ASTM Practice. All reviewed databases are up to date and current as required by the ASTM Practice.

3.2 RESULTS

The results of the search of available environmental regulatory databases conducted by EDR are included in Appendix D. Detailed descriptions for each of the databases may be found in the EDR report. To encompass the entire Site, along with a one-mile buffer beyond the Site boundary, one EDR report was obtained. The EDR report location reference map and the EDR report is included in Appendix D.

As described in the EDR report, the search of available ("reasonably ascertainable") government records indicates several SOCs are located within a one-mile buffer beyond the Site boundary. KTA has reviewed these SOCs closely and determined that none of the SOCs result in the designation of a REC. A general discussion of the findings follows:

- SOC #4 is located adjacent to the northern portion of the Site. The SOC is listed on the CUPA Listing database which identifies sites that are included in the county's unified hazardous material and hazardous waste regulatory program. The SOC is identified as a waste tire facility. The database listing on its own does not indicate the presence of a REC on the Site. The number of tires disposed at this facility is not known. The facility is downgradient topographically from the Site. Additionally, the EDR Report included in Appendix D indicates that groundwater beneath the facility flows to the north and northeast, which is away from the Site. For these reasons, the SOC does not appear to impact the Site in a manner that results in the designation of an REC.

- SOC clusters B and C are located adjacent to the northwest of the Site. The SOCs include the Westlands Water District facility and Discount Tire Company facility. The SOCs are listed on many databases within the EDR Report. Many of the database listings refer to the leaking underground storage tank which was described in detail in Section 2.5 and was closed via a letter of no further action from the RWQCB in 1998. The facilities are downgradient topographically from the Site. Additionally, the EDR Report included in Appendix D indicates that groundwater beneath the facilities flows to the north and northeast, which is away from the Site. Based on the regulatory status of the facilities and the location of the SOCs relatively to the Site, the SOC does not appear to impact the Site in a manner that results in the designation of an REC.

- SOC cluster D is located adjacent to the northeastern portion of the Site. The SOC is identified as the Producers of Cotton Oil Company and Anderson Clayton facility. The SOC is listed on the EMI, SWEEPS UST, CUPA Listing, HAZNET and Historical UST databases. The facility formerly had a 500-gallon gasoline UST with no reported

releases. The SOC has reported air emissions and waste manifests for offsite transport of hazardous materials including asbestos and waste oil. The facility is downgradient topographically from the Site. Additionally, the EDR Report included in Appendix D indicates that groundwater beneath the facility flows to the north and northeast, which is away from the Site. Based on the regulatory status of the facility and the location of the SOC relative to the Site, the SOC does not appear to impact the Site in a manner that results in the designation of an REC.

3.2.1 Orphan Sites

Due to inadequate address information in the environmental databases, orphan sites are often identified in the EDR Reports. These orphan sites are not included on maps and are not considered in EDR's search of "reasonably ascertainable" records, either on the Site or within the ASTM Practice search radius around the Site. Several orphan sites were identified. The majority of these orphan sites were former clandestine drug labs. None of the orphan sites have the potential to impact the Site in a manner that would result in the designation of an REC.

4.0 INFORMATION FROM THE SITE VISIT

Mr. Martin Griesse-Nascimento of KTA visited the Site on March 18, 2019. The strategy for the Site visit included visually evaluating the entire Site. Access to the Site and visibility conditions were excellent. Photographs taken during the Site visit are provided in Appendix E. General information developed during the Site visit is provided below.

4.1 GENERAL OBSERVATIONS

As stated earlier, the Site consists almost entirely of agricultural land. There are no structures on the Site.

The following sections provide general information regarding what was observed during the Site visit. More detailed information is included in the Property Summary Report in Appendix C.

4.2 STORAGE TANKS

4.2.1 Underground Storage Tanks

No underground storage tanks containing hazardous substances or petroleum were identified on the Site.

4.2.2 Aboveground Storage Tanks

No aboveground storage tanks containing hazardous substances or petroleum were identified on the Site.

Figure 5 – AST Located on the Northern Portion of the Site

Based on the KMZ file for the Site, it appears that an AST containing diesel, as shown in Figure 5, is located on the Site (on APN 02807104ST). However, Mr. Alex Young, the Westlands Water District's Associate Resources Analyst indicated that the AST was not located on the Site. Instead, he indicated it was located approximately 30 feet north of the Site. During the Site visit, Mr. Griesse-Nascimento spoke with a representative for the Britz Facility who confirmed the AST was located on their property. The AST contains approximately 5,000 gallons of diesel and is likely utilized to fuel Britz Facility farm equipment. As shown in Figure 6, a deminimis about of soil staining was present near the AST. This soil staining does not impact the Site in a manner that results in the

Figure 6 – Diesel Spill from Diesel AST Located Adjacent to the Northern Portion of the Site

designation of an REC.

4.3 INDICATIONS OF PCBs

No indications of PCB releases were identified on the Site.

4.4 INDICATIONS OF SOLID WASTE DISPOSAL

Two solid waste disposal areas were identified on the Site. One was located in the central portion of the Site on APN 02807106ST and the other on the western portion of the Site on APN 02807101ST. In both cases, the solid waste disposal areas were located underneath trees and consisted of household items (i.e., couches, mattresses, clothes, etc.). No hazardous substances or petroleum products were identified in the solid waste disposal areas. These solid waste disposal areas are considered de minimis and do not result in the designation of RECs. Figure 7 shows the solid waste disposal area on the central portion of the Site and Figure 8 shows the solid waste disposal area on the western portion of the Site.

Figure 7 – De Minimis Solid Waste Disposal Area Located on the Central Portion of the Site

Figure 8 – De Minimis Solid Waste Disposal Area Located on the Western Portion of the Site

4.5 WASTEWATER AND STORMWATER

There is no wastewater generated on the Site. Stormwater appears to infiltrate into the soil.

4.6 STAINED SOIL AND PAVEMENT

No non-deminimis soil or pavement petroleum staining was identified on the Site.

4.7 ON-SITE POTABLE WATER WELL

Three water wells are located on the Site. There was no reporting that the groundwater from these wells was contaminated in a manner that results in the designation of an REC.

4.8 AIR EMISSIONS

No air emissions from industrial or man-made operations that result in RECs were identified on the Site.

4.9 DEMOLITIONS AND FIRES

There were no demolitions identified on the Site that have the potential to result in the release of hazardous substances or petroleum in a manner that results in the designation of an REC.

4.10 RELEASES

No non-de minimis releases of hazardous substances or petroleum were identified during the Site visit.

5.0 FINDINGS

5.1 PROPERTY FINDINGS

KTA has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Site (as described in Section 1.4 of this report), the property. Any exceptions to, or deletions from, this practice are described in Section 5.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Site.

5.2 EXCEPTIONS

Exceptions or data gaps exist when a review requirement identified in the ASTM Practice E1527-13 is not conducted. For this Phase I ESA, one exception exists as follows.

5.2.1 Title Reports

At the time this Phase I ESA was developed, title reports for the properties that make up the Site were unavailable. To provide compliance with the ASTM Practice E1527-13 standard, title reports for these properties are to be reviewed. Given the other reviews conducted as part of this Phase I ESA, this exception is considered to be insignificant and is unlikely to have any impact on the findings included in Section 5.1.

6.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

6.1 STATEMENT AND SIGNATURE

"I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the Site. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312, unless otherwise identified in Section 5.2." A copy of my resume is included in Appendix G.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by KTA Associates, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Parcel Cleared From Having an REC with no Exceptions
02807101ST	Westlands Water District	Alex Young and Katarina Campbell	559-224-1523 and 559-241-6225	Yes	MGN - 3-15-19	N/A	No	Spoke with Katarina Campbell, the Westlands Water District's Supervisor of Resources. She stated that the land has been owned by the District for approximately 15 years and has always been used for grazing or wheat.	No	No	No	No	No	No	No	No	Yes - March 2019	This parcel consists of grazing land and a small forested region. Within the forested region, a solid waste disposal area was identified consisting of household items such as clothes, plastic and other inert waste. Given that no hazardous substances or petroleum products were identified, this does not result in the designation of an REC.	No	Yes
02807102ST	Westlands Water District	Alex Young and Katarina Campbell	559-224-1523 and 559-241-6225	Yes	MGN - 3-15-19	N/A	No	Spoke with Katarina Campbell, the Westlands Water District's Supervisor of Resources. She stated that the land has been owned by the District for approximately 15 years and has always been used for grazing or wheat.	No	No	No	No	No	No	No	No	Yes - March 2019	This parcel consists of grazing land.	No	Yes
02807104ST	Westlands Water District	Alex Young and Katarina Campbell	559-224-1523 and 559-241-6225	Yes	MGN - 3-15-19	N/A	No	Spoke with Katarina Campbell, the Westlands Water District's Supervisor of Resources. She stated that the land has been owned by the District for approximately 15 years and has always been used for grazing or wheat. Martin Griesse-Nascimento also spoke with Alex Young regarding the boundaries of the Site as the KMZ appeared to slightly extend into the Britz Fertilizers Facility located adjacently to the north. Alex Young reviewed the parcel information and determined that the KMZ file was slightly mis mapped and that this parcel's northern boundary does not enter into the Britz Fertilizers Facility.	No	No	No	No	No	No	No	No	Yes - March 2019	This parcel consists of grazing land. Adjacently north to this Site, there is a facility which appears to contain several ASTs. Based on the KMZ file, there appears to be a diesel AST on the Site. However, upon calling the landowner and speaking with Alex Young, it was determined that the tank is not located on the Site and that the KMZ file was slightly mis mapped. There was a minor spill identified at the AST; however, given that the AST is not on the Site and that groundwater generally flows towards the northeast (away from the Site), this does not pose a threat to the Site and does not result in the designation of an REC.	No	Yes
02807106ST	Westlands Water District	Alex Young and Katarina Campbell	559-224-1523 and 559-241-6225	Yes	MGN - 3-15-19	N/A	No	Spoke with Katarina Campbell, the Westlands Water District's Supervisor of Resources. She stated that the land has been owned by the District for approximately 15 years and has always been used for grazing or wheat.	No	No	No	No	No	No	No	No	Yes - March 2019	This parcel consists of grazing land and a small forested region. Within the forested region, a solid waste disposal area was identified consisting of household items such as mattresses, couches, chairs and other inert waste. Given that no hazardous substances or petroleum products were identified, this does not result in the designation of an REC.	No	Yes

PIN	OWNER	CONTACT	Mobile Phone	Interviewer - Phone Interview Completed (Yes or No)	Phone Interviewer Name and Date	Reason for No Interview	Structures Located on the Parcel (Yes or No)	Interviewer - Landowner General Comments	Landowner - Are you aware of any liens or legal actions against the Site property that could result in a future environmental cleanup? (Yes or No)	Landowner - Are you aware of any spills of hazardous materials which have occurred on the Site that could result in a future environmental cleanup? (Yes or No)	Landowner - Are you aware of any other environmental contamination issues within the Site, including landfills or mining activities? (Yes or No)	Landowner - Are you aware of any environmental contamination or activities that might require a clean up on any neighboring properties? EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-SQG site within approximately 3 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
INTERAGENCY TREATMEN EPA ID:: CAD983617499	ADAMS AVE AND THE SA	ENE >2 (2.174 mi.)	25	34

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within approximately 3 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 3 miles of the target property.

Registry ID:: 110066797700

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 9 CUPA Listings sites within approximately 3 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 6 HAZNET sites within approximately 3 miles of the target property.

EXECUTIVE SUMMARY

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 10/22/2018 has revealed that there are 5 CERS sites within approximately 3 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/12/2018
Date Data Arrived at EDR: 12/28/2018
Date Made Active in Reports: 01/11/2019
Number of Days to Update: 14

Source: EPA
Telephone: N/A
Last EDR Contact: 02/15/2019
Next Scheduled EDR Contact: 04/15/2019
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/12/2018
Date Data Arrived at EDR: 12/28/2018
Date Made Active in Reports: 01/11/2019

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/11/2019
Date Data Arrived at EDR: 02/12/2019
Date Made Active in Reports: 03/04/2019
Number of Days to Update: 20

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

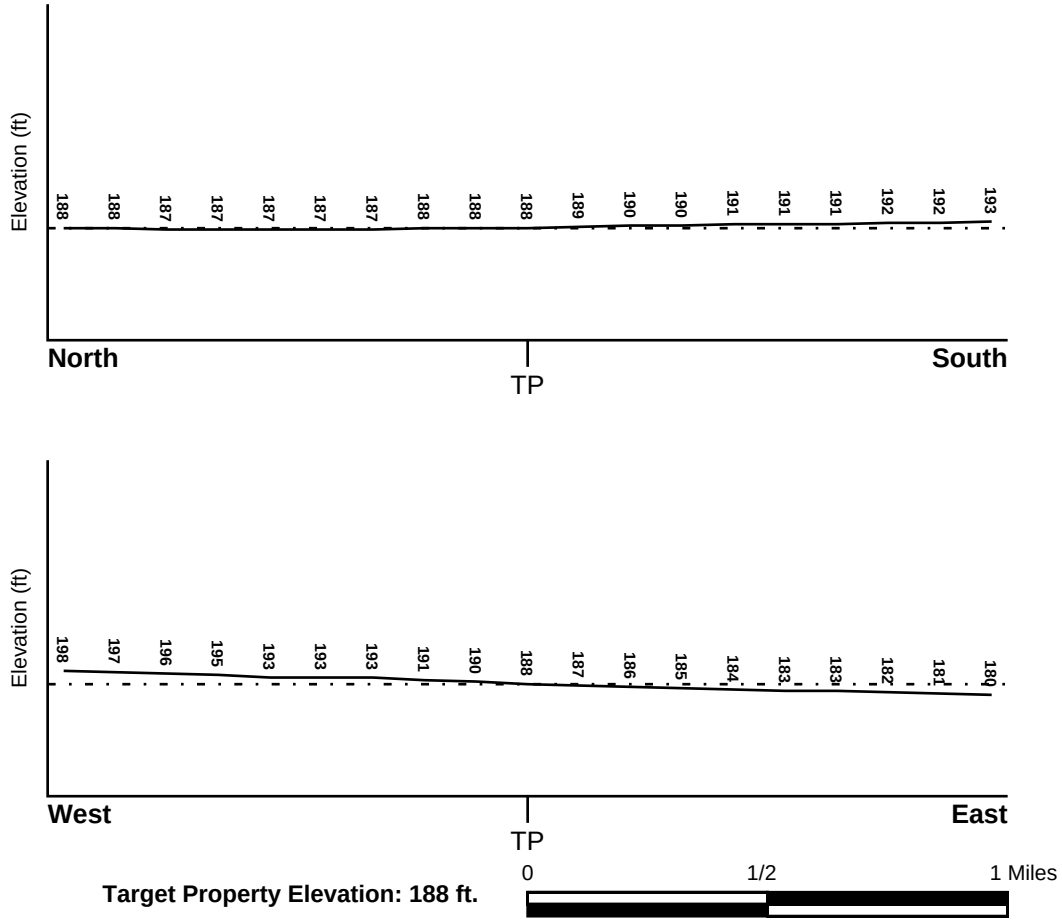
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

06019C2500H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CANTUA CREEK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CALFLAX

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9
2	7 inches	25 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9
3	25 inches	33 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9
4	33 inches	46 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
5	46 inches	64 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 9 Min: 7.9

Soil Map ID: 2

Soil Component Name: TRANQUILLITY

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	30 inches	48 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.02	Max: 8.4 Min: 7.9
2	0 inches	5 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.02	Max: 8.4 Min: 7.9

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX E

Pictorial Summary of the Site

Figure E-1 - Sonrisa Solar Site - Pictorial Summary Location Reference Map

The picture # (i.e., #01, #02, etc.) correlates to the location reference included on the pictures which follow.

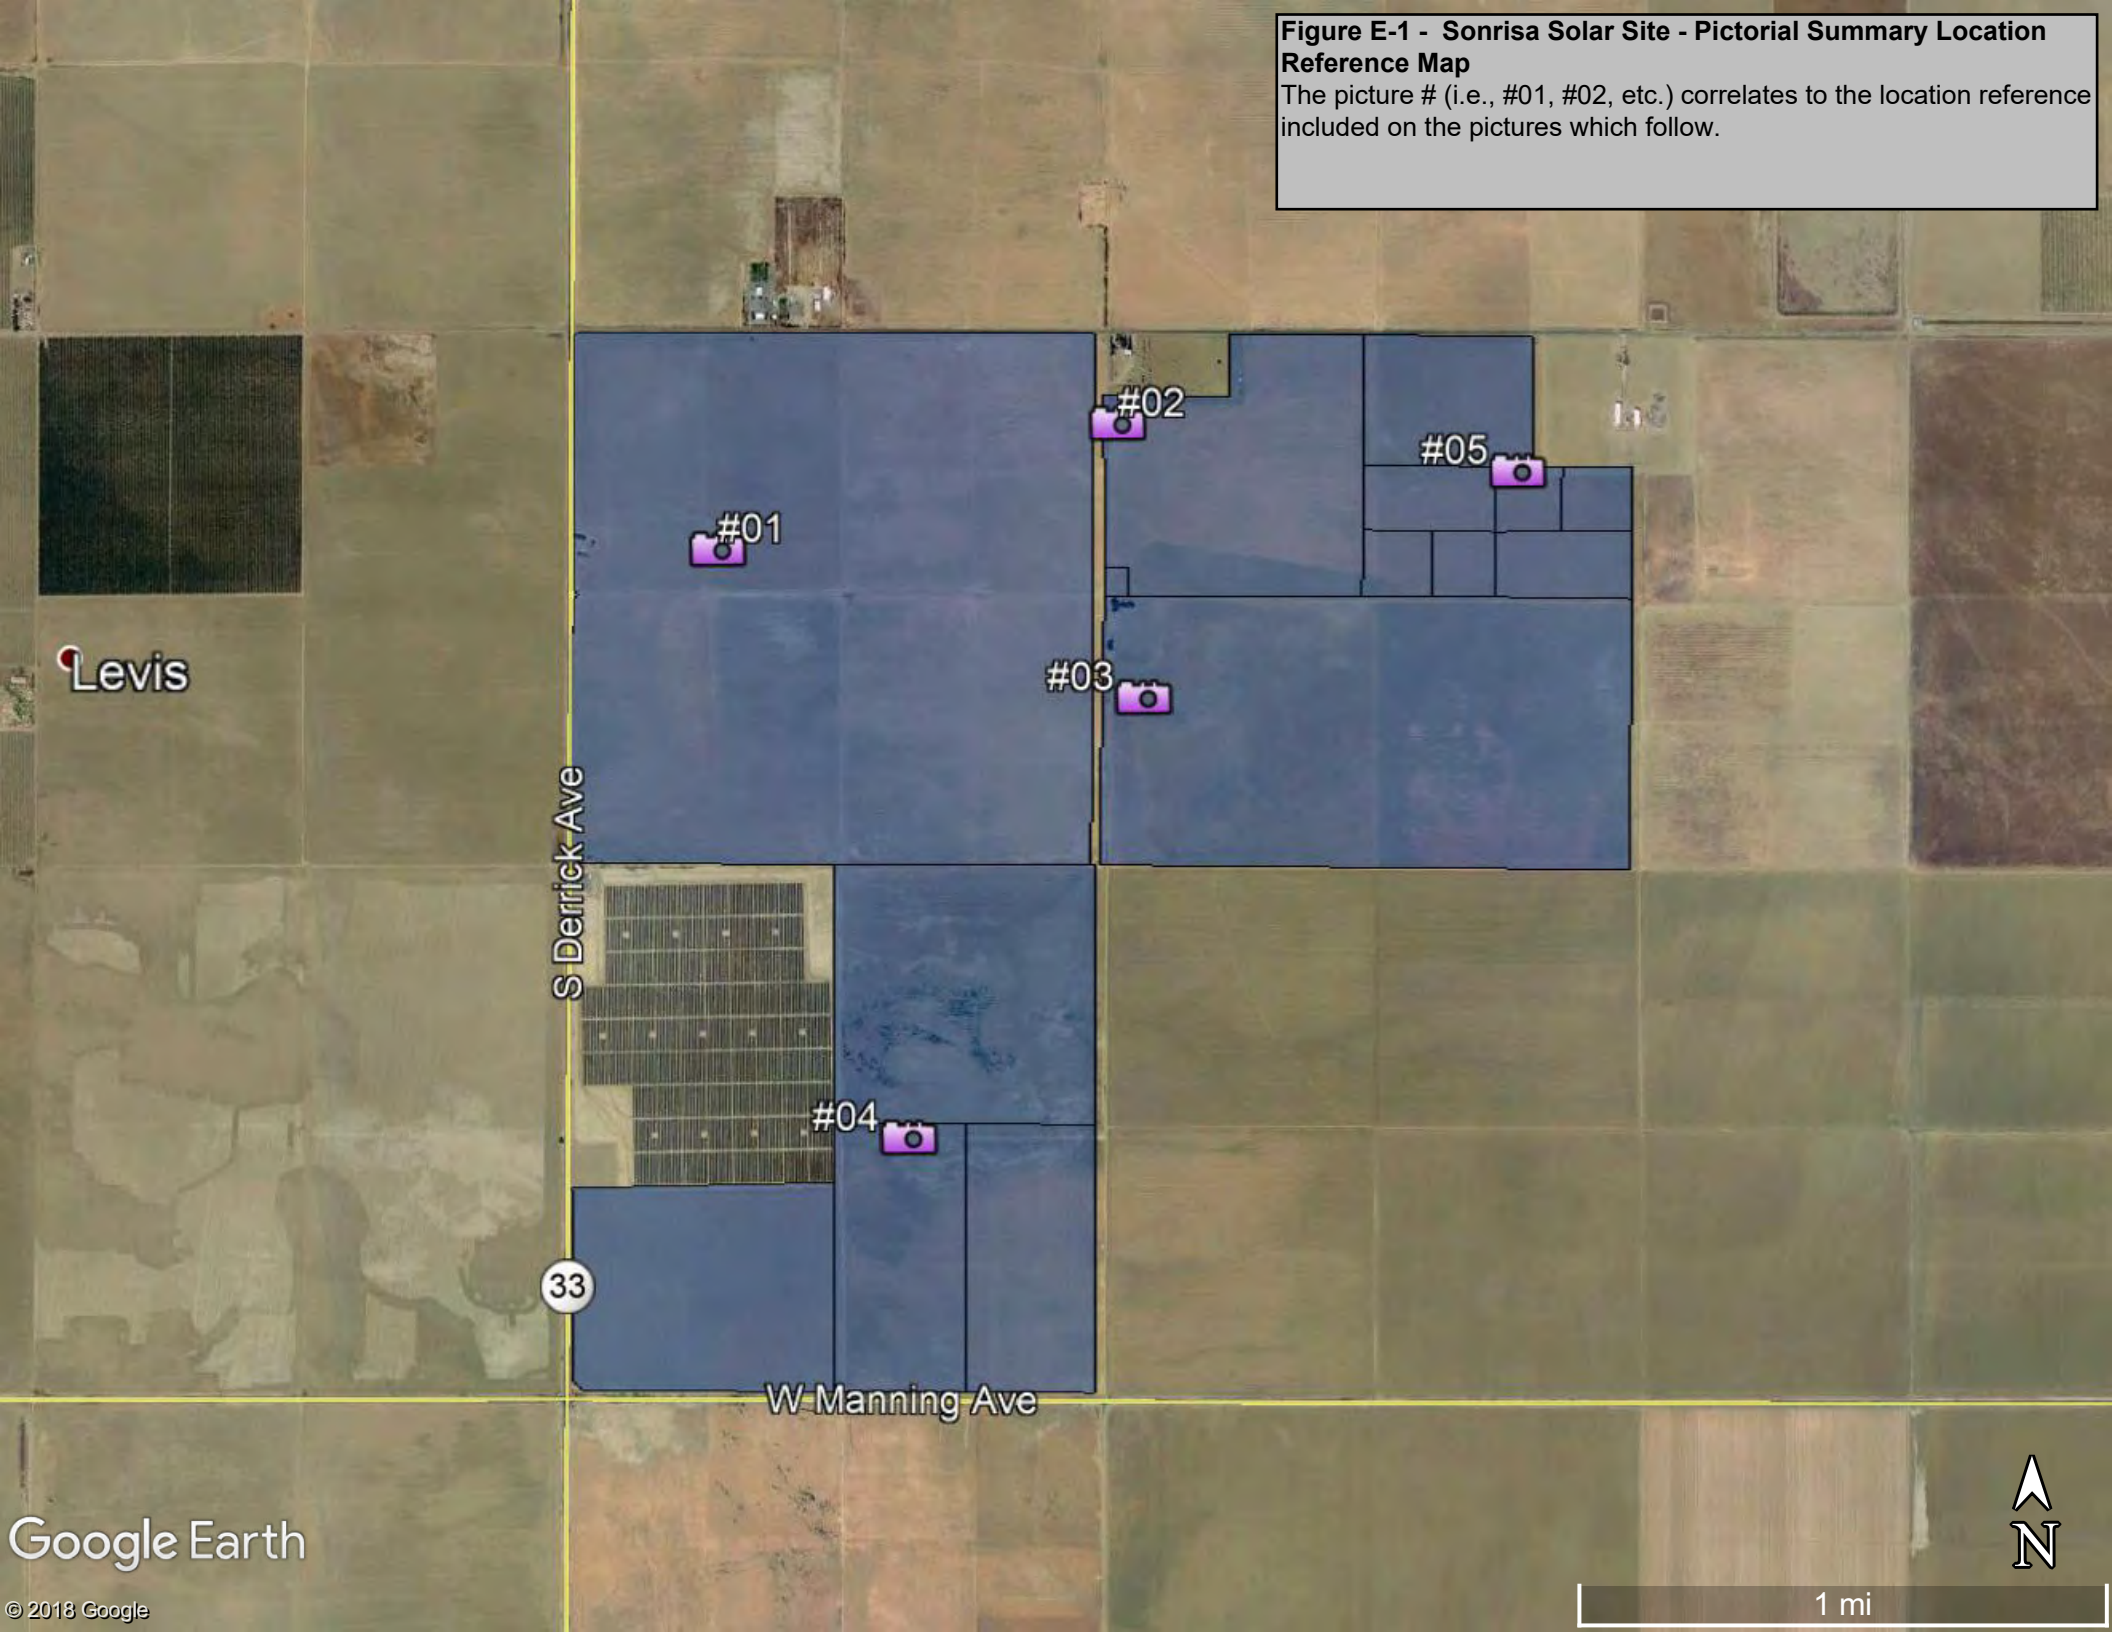

Figure No.: 1

Location: Photo Site #1

Description: Grazing land and a forested region in the background, where a de minimis solid waste disposal area was identified. This solid waste disposal area does not result in the designation of an REC. There is also a utility line shown in the background traveling adjacent to the Site in the south-north direction.

Figure No.: 2

Location: Photo Site #2

Description: Diesel AST Located adjacent to the Site. In the KMZ file, this AST is located within the Site boundaries; however, after confirming with the landowner, this AST is not located within the Site boundaries.

Figure No.: 3

Location: Photo Site #2

Description: Grazing land with a small forested region in the background and a utility line traveling in the south-north direction.

Figure No.: 4

Location: Photo Site #3

Description: De Minimis solid waste disposal area located within the forested region on the Site. This does not result in the designation of an REC.

Figure No.: 5

Location: Photo Site #4

Description: Grazing land with a fenced solar farm located in the background.

Figure No.: 6

Location: Photo Site #5

Description: An abandoned small structure is located adjacent to the Site. Another larger facility is also shown in the background.

APPENDIX F

Petroleum and Mineral Production Evaluation Information

Mineral Evaluation for Sonrisa Solar Site
in Central California

The Sonrisa Solar Site properties (the Site) in central California were evaluated for mineral resources. The Site is within the San Joaquin Basin, which is bound to the west by the California Coast Ranges and to the east by the Sierra Nevada Mountains. The geology in this area is associated with Cenozoic nonmarine sedimentary rock and extensive oil and gas resources. The Site does not consist of any active coal or metal mineral resources, as well as no producing oil and gas wells.

The California Department of Conservation (http://www.conservation.ca.gov/) and U.S. Geological Survey (USGS) references were reviewed to determine if coal or mineral resources were located on or in the vicinity of the Site.

The USGS has created a database of all mines, Mineral Resource Data System (MRDS), including active and closed mines and undeveloped mineral occurrences or prospects, which is accessed through the Internet at http://mrdata.usgs.gov. No mines were located within the Site. Attachment A includes the USGS MRDS Mine Locations map in Fresno County.

The US Energy Information Administration (EIA) map of Coal Resources, Attachment B, does not show any coal reserves within the Site. There is a small coal reserve located within 10 miles west of the Site.

The California Department of Conservation maintains oil and gas wells information at (https://maps.conservation.ca.gov/doggr/wellfinder/#close). No active wells were identified on the Site; however, one dry and abandoned well was adjacent to the northern portion of the Site as shown in Appendix C.

The US Energy Information Administration (EIA) map in Attachment D, shows the Site is not located within the southern portion of the Sacramento Basin, or San Joaquin Basin, an area with extensive natural gas and oil development. The Site, however, is located on the exterior eastern portion of the Basin with limited oil and gas development. Larger gas development regions are located approximately 50 miles south of the Site.

The U.S. Department of Transportation's Office of Pipeline Safety has developed the National Pipeline Mapping System (NPMS) to provide information about gas transmission and liquid transmission operations and their pipelines (https://pvnpms.phmsa.dot.gov/PublicViewer/). There are no pipelines intersecting the Site. The closest pipeline is a gas transmission pipeline located approximately two miles north of the northwestern portion of the Site. The NPMS Pipeline Map can be found in Attachment E.

APPENDIX G

Resume for Environmental Assessor from KTA Associates, Inc.

KEN TAYLOR

SUMMARY OF EXPERTISE

Mr. Ken Taylor has more than 29 years of experience successfully conducting environmental assessments or advising clients on such matters. He combines his in-depth environmental remediation background and regulatory knowledge with proven management and decision making skills to solve complicated problems and deliver results. Mr. Taylor has demonstrated these skills on activities ranging from: (1) serving as the Environmental Professional on over 100 Phase I ESAs, (2) managing environmental restoration, compliance and safety programs for Federal Government clients both as an employee and a contractor; (2) providing EPA, DoD, large law firms and private sector clients with strategic guidance on environmental management, environmental compliance and environmental restoration; and (3) advising clients on the acquisition of contaminated property and companies with environmental liabilities.

REPRESENTATIVE EXPERIENCE RELATED TO THE PROPOSAL

President of KTA Associates, Inc; Seattle, WA; 2001 to Present.

Mr. Taylor is the President of KTA. KTA was founded to provide expert environmental consulting services to both public and private sector clients. KTA is routinely retained by Federal Agencies, law firms, and corporations to provide expert support on topics ranging from environmental site assessment and associated strategic risk management; environmental remedial investigation and remedial action; hazardous waste/materials management; wastewater and stormwater management, pollution prevention, spill prevention and contingency plans, environmental management system development; and sustainability. One unique qualification Mr. Taylor has is his substantial expertise on a wide variety of industrial processes, contaminants, remedial actions and risks associated with property redevelopment. He is able to utilize this expertise to conduct environmental site assessments for many different facilities in a high quality, timely and cost-effective manner. Additionally, he is an accomplished communicator with regulatory agencies, individual citizens and the public in general. He also has significant expertise with the use of probabilistic cost estimating software which allows decision makers to fully understand the range of uncertainties and costs associated with assessing, cleaning up and redeveloping contaminated property.

Program Manager for EDPR Contract to Provide Environmental Phase I and II Site Assessment, Post Assessment Environmental Risk Management Strategy Development at Perspective Wind and Solar Farms; Nationwide; 2003 to Present.

Mr. Taylor serves as Program Manager for KTA's development of Phase I and II ESAs and associated environmental risk management for EDPR, at sites throughout the U.S and Canada. In this role, he has served as the environmental professional on over 50 Phase I ESAs and 8 Phase II ESAs and overseen the development of 50 others. Mr. Taylor routinely provides strategic environmental assessment advisory support at the executive level within EDPR. Mr. Taylor also works on behalf of EDPR with capital organizations such as Citibank and JP Morgan to communicate environmental risks associated with Site development as part of transactions worth over $100M.

Program Manager for EDF-RE Contract to Provide Environmental Phase I and II Site Assessment, Post Assessment Environmental Risk Management Strategy Development at Perspective Wind and Solar Farms; Nationwide; 2008 to Present.

Mr. Taylor serves as Program Manager for KTA's development of Phase I and II ESAs and associated environmental risk management for EDF-RE at sites throughout the U.S. In this role, he has served as the environmental professional on 10 Phase I ESAs and overseen the development of 10

others. Mr. Taylor routinely provides strategic environmental assessment advisory support at the executive level within EDF-RE. Mr. Taylor also worked with EDF-RE to communicate environmental risks associated with site development as part of tax equity transactions worth over $100M.

Program Manager for the US Army Corps of Engineers – Seattle District and Kansas City District Hazardous, Toxic, and Radioactive Waste Program Management; Western United States; 2006 to Present

Mr. Taylor is the Program Manager for the USACE Kansas City and Seattle District HTRW Contracts which largely include environmental assessment projects. Project assignments required expertise in a number of environmental assessment projects including a wide variety of facilities and contaminants. Environmental assessment project types ranged from investigation, cleanup planning, remedial action design, associated cost estimating and public meetings. Additionally, a number of projects focused on environmental planning, site redevelopment and sustainability. Stakeholders range from the Department of Defense to EPA, State of Washington Department of Ecology (among other states), and Indian tribes (including the Yakima Nation), storage, and disposal facilities.

Costco Wholesale Environmental Advisor, Nationwide; 2004 to Present

Mr. Taylor serves at the Program Manager for KTA's environmental projects conducted for Costco Wholesale. The projects generally involve providing regulatory guidance and risk management strategies for Costco warehouse stores throughout the U.S. In this role, he is also routinely requested to advise executive management within Costco on a variety of environmental assessment and compliance issues and environmental risk management strategies.

EDUCATION AND CERTIFICATION

University of Texas, Austin, TX, 1982–1987
B.S. Mechanical Engineering – Energy and Fluid Systems

- University of Texas Scholar

NATIONAL RECOGNIZED SPEAKER FOR ENVIRONMENTAL ASSESSMENT TOPICS

- Routinely speaks at Energy Development Conferences regarding environmental site assessments and associated risk management strategies for Wind Farms and Solar Site Developments.
- Routinely Speaks at University and Corporate Annual Meetings on Environmental Management Topics including Environmental Site Assessment and Risk Management
- Routinely speaks at Government Institutions and Law Seminar Conferences on various Environmental Regulatory Programs and Environmental Assessment

Land Use and Planning

I-1 Consistency with Fresno County General Plan

I-2 Consistency with Fresno County's Solar Facility Guidelines

I-1 Consistency with Fresno County General Plan

APPENDIX I1
Consistency with Fresno County General Plan

I.1 Approach to Analysis

Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15125(d), this analysis describes applicable general plans and regional plans and policies and the manner in which they apply to the Sonrisa Solar Project (the Project), and then evaluates the consistency of the Project with these plans and policies. Each environmental resource section in Chapter 4, *Environmental Analysis*, identifies the applicable statutes, regulations, ordinances, plans, policies, and standards that pertain to that resource. The following analysis specifically addresses the Project's consistency with the Fresno County General Plan. The consistency analysis for other applicable plans, policies, and regulations is provided in the pertinent topical sections of Chapter 4, in the context of the subject resource area. **Table I1-1** provides an index of such discussions, listing both CEQA significance criteria and location in this document where the reader can find the impact evaluation.

The Fresno County General Plan contains seven policy elements that guide physical development within the County: Economic Development; Agriculture and Land Use; Transportation and Circulation; Public Facilities and Services; Open Space and Conservation; Health and Safety; and Housing. Consistent with CEQA Guidelines section 15125(d), General Plan policies that are not relevant to the Project are not discussed here. For example, policies guiding County review of specific plans or policies related to land use designations that are not present within the Project boundary are not addressed.

Because the policy language found in a general plan is susceptible to varying interpretations, it is often difficult to determine whether a proposed project is consistent or inconsistent with such policies. Furthermore, because plans often contain numerous policies emphasizing differing legislative goals, a project may be consistent with a general plan, taken as a whole, even though it may appear to be inconsistent with specific policies within the plan. The board or commission that enacted the plan or policy generally determines the meaning of such policies; these interpretations prevail if they are "reasonable," even though other reasonable interpretations may also exist. In light of these considerations, the consistency evaluation in this Draft EIR reflects the County's determination that, as a whole, that the Project is consistent with applicable plans and policies.[1] Finally, the Project is compared to policies in each of the General Plan elements.

[1] Direct and indirect physical impacts resulting from Project implementation are not addressed in this section, but in the appropriate technical sections of this Draft EIR (See Chapter 4, *Environmental Analysis*). Any conflict between the Project and General Plan policies that relates to physical environmental issues are discussed in Chapter 4. The compatibility of the Project with Fresno County General Plan policies that do not relate to physical environmental issues will be considered by decision-makers as part of their decision about whether to approve or deny the Project. Any potential conflicts identified as part of the process would not alter the physical environmental effects of the Project.

TABLE I1-1
CEQA SIGNIFICANCE CRITERIA REQUIRING EVALUATION OF CONSISTENCY WITH PLANS AND POLICIES

Significance Criteria (from Appendix G of the CEQA Guidelines)	EIR Section
Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state or locally designated scenic highway	Section 4.2, *Aesthetics*
Conflict with existing zoning for agricultural use, or a Williamson Act contract	Section 4.3, *Agriculture and Forestry Resources*
Conflict with or obstruct implementation of the applicable air quality plan	Section 4.4, *Air Quality*
Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance	Section 4.5, *Biological Resources*
Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.	Section 4.5, *Biological Resources*
Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.	Section 4.9, *Greenhouse Gas Emissions*
Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.	Section 4.12, *Land Use and Planning*
Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan	Section 4.13, *Mineral Resources*
Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies	Section 4.14, *Noise and Acoustics*
Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.	Section 4.18, *Transportation*
Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.	Section 4.18, *Transportation*

Tables I1-2 through I1-6 summarizes the Project's consistency with applicable objectives, goals, and policies of the Fresno County General Plan is discussed below. As shown in the table, after the implementation of the various mitigation measures identified in this Draft EIR, the Project would be consistent with applicable objectives, goals, and policies.

I.2 Consistency with the Fresno County General Plan Agriculture and Land Use Element

The Agriculture and Land Use Element describes the Countywide land use concept and is intended to help the County achieve integrated and coordinated land use, open space, and transportation by defining areas of intended growth and areas that should be preserved.

The Project site is zoned AE20, Exclusive Agricultural with a minimum lot size of 20 acres (Fresno County 2021). As indicated in Section 816 of the Fresno County Zoning Code, permitted uses in AE districts include raising livestock, poultry, and plant crops; single-family residences

and accessory and farm buildings; and other agricultural and home occupation uses. Electrical transmission and distribution substations are allowed in AE districts subject to director review and approval (Section 816.2(D)). Additionally, Fresno County processes PV solar facilities through the Unclassified Conditional Use Permit process based on Section 853.B(14) of the Zoning Ordinance. Although the Project would occupy land designated as agriculture, it would not conflict with the County's preservation and conservation objectives. The Project's physical environmental impacts on habitat, recreation, scenic values, mineral resource extraction, and natural resource preservation are discussed in Chapter 4 of this Draft EIR. **Table I1-2** evaluates the Project's consistency with the Countywide agriculture and land use policies.

TABLE I1-2
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
***Policy LU-A.1*:** The County shall maintain agriculturally-designated areas for agriculture use and shall direct urban growth away from valuable agricultural lands to cities, unincorporated communities, and other areas planned for such development where public facilities and infrastructure are available.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution.
***Policy LU-A.2*:** The County shall allow by right in areas designated Agriculture activities related to the production of food and fiber and support uses incidental and secondary to the on-site agricultural operation. Uses listed in Table LU-3 are illustrative of the range of uses allowed in areas designated Agriculture.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution.
***Policy LU-A.3*:** The County may allow by discretionary permit in areas designated Agriculture, special agricultural uses and agriculturally-related activities, including value added processing facilities, and certain non-agricultural uses listed in Table LU-3. Approval of these and similar uses in areas designated Agriculture shall be subject to the following applicable criteria: a. The use shall provide a needed service to the surrounding agricultural area which cannot be provided more efficiently within urban areas or which requires location in a non-urban area because of unusual site requirements or operational characteristics; b. The use should not be sited on productive agricultural lands if less productive land is available in the vicinity; c. The operational or physical characteristics of the use shall not have a detrimental impact on water resources or the use or management of surrounding properties within at least one-quarter (1/4) mile radius; d. A probable workforce should be located nearby or be readily available	***Not applicable.*** The policies pertain to County policy actions that are not related to the Project or review of its associated permit applications.
Policy LU-A.4: The County shall require that the recovery of mineral resources and the exploration and extraction of oil and natural gas in areas designated Agriculture comply with the Mineral Resources Section of the Open Space and Conservation Element.	***Not Applicable.*** The Project does not include mineral resources recovery of oil and natural gas extraction.
Policy LU-A.5: The County shall allow the Agricultural Commercial (AC) center zone district to remain in areas designated Agriculture if the land was so zoned prior to September 20, 1990. Commercial uses legally established prior to that date shall be deemed conforming, but expansion or the addition of new commercial uses shall require a discretionary permit as provided in Policy LU-A.3.	***Not Applicable.*** The Project site is zoned AE20, Exclusive Agricultural.

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.6: The County shall maintain twenty (20) acres as the minimum permitted parcel size in areas designated Agriculture, except as provided in Policies LU-A.9, LUA. 10, and LU-A.11. The County may require parcel sizes larger than twenty (20) acres based on zoning, local agricultural conditions, and to help ensure the viability of agricultural operations.	***Not Applicable.*** The Project does not include subdivision of land into smaller parcels.
Policy LU-A.7: The County shall generally deny requests to create parcels less than the minimum size specified in Policy LU-A.6 based on concerns that these parcels are less viable economic farming units, and that the resultant increase in residential density increases the potential for conflict with normal agricultural practices on adjacent parcels. Evidence that the affected parcel may be an uneconomic farming unit due to its current size, soil conditions, or other factors shall not alone be considered a sufficient basis to grant an exception. The decision-making body shall consider the negative incremental and cumulative effects such land divisions have on the agricultural community.	***Not Applicable.*** The Project does not include subdivision of land into smaller parcels.
Policy LU-A.8: The County shall allow by right on each parcel designated Agriculture and zoned for agricultural use one (1) single family residential unit. One (1) additional single family residential unit shall be allowed for each twenty (20) acres in excess of twenty (20) acres where the required minimum parcel size is twenty (20) acres. One (1) additional single family residential unit shall be allowed for each forty (40) acres in excess of forty (40) acres where the required minimum parcel size is forty (40) acres. The County may, by discretionary permit, allow a second unit on parcels otherwise limited by this policy to a single unit.	***Not Applicable.*** The Project does not propose any dwelling units.
Policy LU-A.9: The County may allow creation of homesite parcels smaller than the minimum parcel size required by Policy LU-A.6, if the parcel involved in the division is at least twenty (20) acres in size, subject to the following criteria: a. The minimum lot size shall be sixty thousand (60,000) square feet of gross area, except that a lesser area shall be permitted when the owner submits evidence satisfactory to the Health Officer that the soils meet the Water Quality Control Board Guidelines for liquid waste disposal, but in no event shall the lot be less than one (1) gross acre; and b. One of the following conditions exists: 1. A lot less than twenty (20) acres is required for financing construction of a residence to be owned and occupied by the owner of abutting property; or 2. The lot or lots to be created are intended for use by persons involved in the farming operation and related to the owner by adoption, blood, or marriage within the second degree of consanguinity, there is only one (1) lot per related person, and there is no more than one (1) gift lot per twenty (20) acres; or 3. The present owner owned the property prior to the date these policies were implemented and wishes to retain his/her homesite and sell the remaining acreage for agricultural purposes. Each homesite created pursuant to this policy shall reduce by one (1) the number of residential units otherwise authorized on the remainder parcel created from the original parcel. The remainder parcel shall be entitled to no less than one residential unit.	***Not Applicable.*** The Project does not propose an agricultural commercial center.
Policy LU-A.10: The County may allow by discretionary permit creation of substandard lots when necessary for the development of an agricultural commercial center pursuant to Policy LU-A.3 or in conjunction with development within a designated commercial interchange within the Westside Freeway Corridor Overlay. Approval of such parcels shall take into consideration the proposed use of the property, surrounding uses, and the potential for abandonment of the planned commercial use at a future date. Appropriate conditions shall be applied to minimize adverse impacts on surrounding agricultural operations. Parcels for agricultural commercial centers shall in no case be less than one (1) gross acre.	***Not Applicable.*** The Project does not propose an agricultural commercial center.

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.11: The County may allow by discretionary permit creation of substandard size lots when such action is deemed necessary by the Board of Supervisors for the recovery of mineral resources and the exploration and extraction of oil and gas in accordance with the policies of Section OS-C, Mineral Resources, of the Open Space and Conservation Element. In no case shall such action result in creation of lots less than five (5) gross acres in size.	***Not Applicable.*** The Project does not include mineral resources recovery of oil and natural gas extraction.
Policy LU-A.12: In adopting land uses policies, regulations and programs, the County shall seek to protect agricultural activities from encroachment of incompatible land uses.	***Consistent.*** This policy is intended to guide the efficient use of land within the County. The General Plan acknowledges the need to provide the necessary infrastructure, services, and resources to accommodate planned growth. The Project would not be an inefficient use of land because it would not adversely affect the County's ability to direct growth into strategically located centers or existing developed areas; rather, it would be remotely located but would serve the County's anticipated growth. This Draft EIR represents the process of evaluating the Project's impacts to the environment, infrastructure, and services, and the County will consider its impacts to the economy when making decisions regarding approval or disapproval of the permit applications.
Policy LU-A.13: The County shall protect agricultural operations from conflicts with nonagricultural uses by requiring buffers between proposed non-agricultural uses and adjacent agricultural operations.	***Consistent.*** The Project would maintain a buffer between the Project and adjacent agricultural operations and would implement a reclamation plan to return the site to a state of readiness for agricultural use after Project decommissioning. The Project would be subject to review as part of the UCUP process. Section 4.3, *Agriculture and Forestry Resources* discusses potential impacts to agricultural resources.
Policy LU-A.14: The County shall ensure that the review of discretionary permits includes an assessment of the conversion of productive agricultural land and that mitigation be required where appropriate.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution substations.
Policy LU-A.15: The County shall generally condition discretionary permits for residential development within or adjacent to agricultural areas upon the recording of a Right-to-Farm Notice, which is an acknowledgment that residents in the area should be prepared to accept the inconveniences and discomfort associated with normal farming activities and that an established agricultural operation shall not be considered a nuisance due to changes in the surrounding area.	***Consistent.*** Although the Project does not include residential development, the Applicant would be required to record with the County recorder a Right-to-Farm Notice indicating that adjacent agricultural operations shall not become a nuisance due to the changed condition of the Project site.
Policy LU-A.16: The County should consider the use of agricultural land preservation programs that improve the competitive capabilities of farms and ranches, thereby ensuring long-term conservation of viable agricultural operations. Examples of programs to be considered should include: land trusts; conservation easements; dedication incentives; new and continued Williamson Act contracts; Farmland Security Act contracts; the California Farmland Conservancy Program Fund; agricultural education programs; zoning regulations; agricultural mitigation fee program; urban growth boundaries; transfer of development rights; purchase of development rights; and agricultural buffer policies.	***Not Applicable.*** The Project does not conflict with the County's ability to establish agricultural preservation programs. The Project site is not under Williamson Act contract.

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy LU-A.17: The County shall accept California Land Conservation contracts on all designated agricultural land subject to location, acreage, and use limitations established by the County.	***Not Applicable.*** The Project site is not under Williamson Act contract and project implementation would not conflict with the County's ability to review Williamson Act contracts.
Policy LU-A.18: The County shall encourage land improvement programs to increase soil productivity in areas containing lesser quality agricultural soils.	***Not Applicable.*** The Project would not conflict with the County's ability to encourage land improvement programs.
Policy LU-A.19: The County shall encourage landowners to participate in programs that reduce soil erosion and increase soil productivity. To this end, the County shall promote coordination between the Natural Resources Conservation Service, Resource Conservation Districts, UC Cooperative Extension, and other agencies and organizations.	***Consistent.*** Section 4.8, *Geology, Soils, and Paleontological Resources* includes an evaluation of potential erosion-related impacts, and associated mitigation. The Project would comply with a Construction General Permit, and implementation of a Stormwater Pollution Prevention Plan (SWPPP) would limit the impact of construction-related soil erosion by enacting best management practices (BMPs) to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site would be replanted with a rangeland seed mix of grasses and forage crops if required.
Policy LU-A.20: Water Resources. The County shall adopt and support policies and programs that seek to protect and enhance surface water and groundwater resources critical to agriculture.	***Generally Consistent.*** The impact of the Project on surface water quality would be less than significant, surface water movement and infiltration is not expected to change significantly. Additionally, the Project would have a less than significant impact on groundwater supplies and groundwater recharge during Project decommissioning with implementation of Mitigation Measure 4.11-1 (Determine Future Water Supply Availability).
Program LU-A.C: The County shall develop and implement guidelines for design and maintenance of buffers to be required when new non-agricultural uses are approved in agricultural areas. Buffer design and maintenance guidelines shall include, but not be limited to, the following: a. Buffers shall be physically and biologically designed to avoid conflicts between agriculture and non-agricultural uses. b. Buffers shall be located on the parcel for which a permit is sought and shall protect the maximum amount of farmable land, c. Buffers generally shall consist of a physical separation between agricultural and non-agricultural uses. The appropriate width shall be determined on a site-by-site basis taking into account the type of existing agricultural uses, the nature of the proposed development, the natural features of the site, and any other factors that affect the specific situation. d. Appropriate types of land uses for buffers include compatible agriculture, open space and recreational uses such as parks and golf courses, industrial uses, and cemeteries. e. The County may condition its approval of a project on the ongoing maintenance of buffers.	***Consistent.*** A Pest Management Plan would be implemented to control the introduction or establishment of pests or weeds during Project activities. Implementation of this plan would prevent the Project site from becoming a nuisance to adjacent agricultural operations through the introduction of pests or weeds. Consistent with the Fresno County Solar Facility guidelines, the Project would include a sufficient buffer to minimize impacts of the operation to adjacent properties.

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
f. A homeowners' association or other appropriate entity shall be required to maintain buffers to control litter, fire hazards, pests, and other maintenance problems. g. Buffer restrictions may be removed if agricultural uses on all adjacent parcels have permanently ceased. (See Policy LU-A.16)	
Program LU-A.E: The County shall continue to implement the County's Right-to-Farm Ordinance, and will provide information to the local real estate industry to help make the public aware of the right-to-farm provisions in their area. (See Policy LU-A.15)	***Consistent.*** Although the Project does not include residential development, the Applicant would be required to record with the County recorder a Right-to-Farm Notice indicating that adjacent agricultural operations shall not become a nuisance due to the changed condition of the Project site.
Policies LU-B.1 – LU-B.14	***Not Applicable.*** The Project is not Located within the Westside Rangelands Area.
Policies LU-C.1 – LU-C.10	***Not Applicable.*** The Project is not Located within the River Influence Areas.
Policies LU-D.1 – LU-D.7	***Not Applicable.*** The Project is not Located within the Westside Freeway Corridor.
Policies LU-E.1 – LU-E.28	***Not Applicable.*** The Project does not include Rural Residential development.
Policies LU-F.1 – LU-F.42	***Not Applicable.*** The Project does not include Urban Transit, Residential, Commercial, or Industrial development.
Policies LU-G.1 – LU-G.23	***Not Applicable.*** The Project is not Located within the incorporated or City fringe areas or an unincorporated community.

I.3 Consistency with Other Elements of the Fresno County General Plan

I.3.1 Transportation and Circulation Element

Fresno County's General Plan includes policies regarding access and safety standards of roadway facilities, bike facilities, and public transit. Although the General Plan seeks to coordinate multiple forms of transportation, including cars, commercial vehicles, buses, transit, bicycles, and pedestrian traffic, the General Plan does not contain specific policies governing pedestrian traffic. Fresno County also has adopted a Regional Bicycle and Recreational Trails Master Plan (Fresno County 2013) that addresses non-motorized transportation systems and identifies barriers to trails and bikeways.

The Project would not conflict with the objectives and policies of the Transportation and Circulation Element. As described in Section 4.18, *Transportation*, no public transportation services or dedicated pedestrian or bicycle facilities are on roads that access the Project site, and neither State Route (SR) 33 nor other roadways that would be traveled by Project traffic are listed within the Transportation and Circulation Element as an "existing or planned bikeway." The traffic generated by the Project would have a less than significant impact on levels of service on

area roadways after the incorporation of Mitigation Measure 4.18-1, Construction and Decommissioning Traffic Management Plan. Similarly, the Project site would not introduce a barrier to non-motorized travel. Although the Project would not be located near mass transit services, it would not impede the future development of the types of circulation systems envisioned by the General Plan because it would not occupy land that would be needed to create transportation corridors or result in any other long-term changes that would adversely affect transportation in the County.

Project consistency with specific Transportation and Circulation Element policies is presented in **Table I1-3** below.

TABLE I1-3
FRESNO COUNTY GENERAL PLAN TRANSPORTATION AND CIRCULATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy TR-A.3: The County shall require that new or modified access to property abutting a roadway and to intersecting roads conform to access specifications in the Circulation Diagram and Standards section. Exceptions to the access standards may be permitted in the manner and form prescribed in the Fresno County Zoning and Subdivision Ordinances, provided that the designed safety and operational characteristics of the existing and planned roadway facility will not be substantially diminished.	***Consistent.*** Project related traffic would have a less than significant impact related to local roadways abutting the Project site after the implementation of Mitigation Measure 4.18-1. Design and construction of Project access road intersections would conform with Fresno County standards (per General Plan Policies). Among the applicable requirements are rights-of-way and setback requirements.
Policy TR-A.5: The County shall require dedication of right-of-way or dedication and construction of planned road facilities as a condition of land development, and require an analysis of impacts of traffic from all land development projects including impacts from truck traffic. Each such project shall construct or fund improvements necessary to mitigate the effects of traffic from the project. The County may allow a project to fund a fair share of improvements that provide significant benefit to others through traffic impact fees.	***Consistent.*** An assessment of potential traffic impacts, including truck traffic, is provided in Section 4.18.
Policy TR-A.8: The County shall ensure that land development that affects roadway use or operation or requires roadway access to plan, dedicate, and construct required improvements consistent with the criteria in the Circulation Diagram and Standards section of this element.	***Consistent.*** Local access to the Project site is provided from West Manning Avenue and West Adams Avenue. These roads primarily serve agriculturally-related traffic, with corresponding low existing traffic volumes.

I.3.2 Public Facilities and Services Element

The Public Facilities and Services Element of the Fresno County General Plan contains goals, policies, and implementation program measures to ensure public facilities and services are adequately available and accessible in a timely fashion to serve new development. The Project's impacts with respect to public services, including police, fire, and education services, are primarily addressed in Sections 4.16, *Public Services*, and 4.10, *Hazards and Hazardous Materials.* Project consistency with specific Public Facilities and Services Element policies is presented in **Table I1-4** below.

TABLE I1-4
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-C.3: To reduce demand on the County's groundwater resources, the County shall encourage the use of surface water to the maximum extent feasible.	***Consistent.*** Groundwater extraction associated with construction and operation would not cause substantial depletion of the groundwater basin. The Project would have a less than significant impact to groundwater resources during decommissioning with implementation of Mitigation Measure 4.11-1 (Determine Future Water Supply Availability). An analysis of the Project's impact to groundwater resources is provided in Section 4.11, *Hydrology and Water Quality*.
Policy PF-C.25: The County shall require that all new development within the County use water conservation technologies, methods, and practices as established by the County.	***Consistent.*** The Project would comply with the Fresno County Water Conservation Ordinance (Effective October 30, 2014). The Project would comply with water conservation measures outlined in the ordinance, as necessary.
Policy PF-D.6: The County shall permit individual on-site sewage disposal systems on parcels that have the area, soils, and other characteristics that permit installation of such disposal facilities without threatening surface or groundwater quality or posing any other health hazards and where community sewer service is not available and cannot be provided.	***Consistent.*** The Project would use portable restrooms or a septic system, which would be installed for sanitary facilities in the O&M building. If an in-ground septic system is constructed it would include a 1,500-gallon septic tank and leach field. Either the septic tank and leach field or portable restrooms would be installed and maintained in accordance with County and state requirements.
Policy PF-E.7: The County shall require new development to pay its fair share of the costs of Fresno County storm drainage and flood control improvements within unincorporated areas.	***Consistent.*** The Project is not located in an area with an existing or planned stormwater drainage system.
Policy PF-E.11: The County shall encourage project designs that minimize drainage concentrations and maintain, to the extent feasible, natural site drainage patterns.	***Consistent.*** The Project would not substantially alter the existing drainage pattern of the area. The Project would be designed to minimize substantial alterations to drainage patterns on the Project site. The slight increase in runoff generated from the impervious surfaces would likely infiltrate into the ground over a short distance. Rain falling onto the solar arrays would drain onto the ground underneath, which would remain pervious.
Policy PF-E.13: The County shall encourage the use of natural storm water drainage systems to preserve and enhance natural drainage features.	***Consistent.*** The Project is not located in an area with an existing or planned stormwater drainage system.
Policy PF-E.14: The County shall encourage the use of retention-recharge basins for the conservation of water and the recharging of the groundwater supply.	***Consistent.*** Runoff generated from the impervious surfaces would be minimal and likely infiltrate into the ground over a short distance. Rain falling onto the solar arrays would drain onto the ground underneath, which would remain pervious.
Policy PF-E.21: The County shall require the use of feasible and practical best management practices (BMPs) to protect streams from the adverse effects of construction activities, and shall encourage the urban storm drainage systems and agricultural activities to use BMPs.	***Consistent.*** None of the new impervious surfaces would be adjacent to or otherwise directly connected to a stream.
Policy PF-F.1: The County shall continue to promote maximum use of solid waste source reduction, reuse, recycling, composting, and environmentally-safe transformation of wastes.	***Consistent.*** The Project would be required to comply with Fresno County's Construction and Demolition (C&D) Debris Recycling Program which requires a Waste Management Plan for recycling a minimum of 50 percent of all non-hazardous waste. Wooden construction waste would be sold, recycled, or chipped and spread on the Project site for weed control as appropriate. Other compostable materials, such as vegetation, might also be composted off-site. Operation and maintenance activities would produce negligible volumes of solid and liquid wastes that would be disposed of in accordance with all applicable requirements.

TABLE I1-4 (CONTINUED)
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-F.4: The County shall ensure that all new development complies with applicable provisions of the County Integrated Waste Management Plan.	***Consistent.*** The Project would generate solid waste during construction, operation and maintenance, and decommissioning activities. All handling and processing of construction, demolition, and inert debris would be in accordance with applicable regulatory requirements. Landfill waste generated by the Project would not exceed its permitted daily tonnage or deplete substantial long-term capacity.
Policy PF-J.3: The County shall require all new residential development along with new urban commercial and industrial development to underground utility lines onsite.	***Generally Consistent.*** The Project would include both underground and overhead interconnection and distribution lines.
Goal PF-G. To protect life and property by deterring crime and ensuring the prompt an efficient provision of law enforcement service and facility needs to meet the growing demand for police services associated with an increasing population.	***Consistent.*** The Project would not conflict with the County's ability to provide efficient law enforcement services. Police protection primarily may be required for incidents such as the theft of construction equipment and/or vandalism of the Project. To ensure Facility security, offsite security personnel could be dispatched during nighttime hours or could be onsite. In addition, appropriate security measures would be implemented to ensure control of site access and minimize security risks.
Policy PF-G.2: The County shall strive to maintain a staffing ratio of two (2) sworn officers serving unincorporated residents per 1,000 residents served. (This count of officers includes all ranks of deputy sheriff personnel and excludes all support positions and all sworn officers serving county wide population interests such as bailiffs, and sworn officers serving contract cities and grant specific populations).	***Consistent.*** The Project would not conflict with the County's ability to meet the desired staffing ratio; the Project would not result in new residents that could contribute to the demand for police services.
Policy PF-G.6: The County shall promote the incorporation of safe design features (e.g., lighting, adequate view from streets into parks) into new development by providing Sheriff Department review of development proposals.	***Consistent.*** As described in the Project's operational statement (application materials), nighttime lighting for site security or maintenance requirements would be directed downward and shielded to focus illumination on the desired work areas only, and to prevent light spillage onto adjacent properties.
Goal PF-H. To ensure the prompt and efficient provision of fire and emergency medical facility and service needs, to protect residents of and visitors to Fresno County from injury and loss of life, and to protect property from fire.	***Consistent.*** Temporary construction- or decommissioning-related increases in demand on fire protection services would not affect the ability of Fresno County Fire Protection District to respond to incidents within the recommended time periods. Operation personnel would not contribute to a significant population increase, and would not result in an increase to the demand for fire protection services or require new or altered facilities.
Policy PF-H.1: The County shall work cooperatively with local fire protection districts to ensure the provision of effective fire and emergency medical services to unincorporated areas within the county.	***Consistent.*** The Project would not conflict with the County's ability to provide effective emergency services. The Project would not result in new residents that could contribute to the demand for police services, and would incorporate onsite security measures.
Implementation Program PF-H.B: The County shall work with the California Department of Forestry and Fire Protection, local fire protection agencies, and city fire departments to maximize the use of resources to develop functional and/or operational consolidations and standardization of services and to maximize the efficient use of fire protection resources. (See Policy PF-H.1).	***Consistent.*** The Project would not affect the County's ability to develop interagency coordination.

TABLE I1-4 (CONTINUED)
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy PF-H.2: Prior to the approval of development projects, the County shall determine the need for fire protection services. New development in unincorporated areas of the County shall not be approved unless adequate fire protection facilities are provided.	***Consistent.*** Increases in long-term demand for fire protection services typically are associated with substantial increases in population. Once operational, up to 7 workers could be on the site at any one time which would not contribute to a significant population increase, and would not result in an increase to the demand for fire protection services or require new or altered facilities.
Policy PF-H.5: The County shall require that new development be designed to maximize safety and minimize fire hazard risks to life and property.	***Consistent.*** Section 4.20, *Wildfire*, includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. Regardless, best management practice/fire prevention measures would be implemented to minimize fire risk.
Policy PF-H.8: The County shall encourage local fire protection agencies in the County to maintain the following as minimum standards for average first alarm response times to emergency calls: a. 5 minutes in urban areas; b. 15 minutes in suburban areas; and c. 20 minutes in rural areas.	***Consistent.*** Temporary construction- or decommissioning-related increases in demand on fire protection services would not affect the Fresno County Fire Protection District's ability to respond to incidents within the recommended time periods.
Policy PF-H.10: The County shall ensure that all proposed developments are reviewed for compliance with fire safety standards by responsible local fire agencies per the Uniform Fire Code and other State and local ordinances.	***Consistent.*** Section 4.20 includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. Regardless, best management practice/ fire prevention measures would be implemented in order to minimize fire risk.
Policy PF-H.11: The County shall encourage local fire protection agencies to provide and maintain advanced levels of emergency medical services (EMS) to the public, consistent with current practice.	***Consistent.*** The Project would not affect emergency response agencies' ability to provide and maintain advanced emergency services. Construction and operation would not require road closures that could affect emergency routes.
Goal PF-I. To provide for the educational needs of Fresno County and provide libraries for the educational, recreational, and literary needs of Fresno County residents.	***Consistent.*** No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities.
Policy PF-I.1: The County shall encourage school districts to provide quality educational facilities to accommodate projected student growth in locations consistent with land use policies of the General Plan.	***Consistent.*** No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities.
Policy PF-I.4: The County shall work cooperatively with school districts in monitoring housing, population, and school enrollment trends and in planning for future school facility needs and shall assist school districts in locating appropriate sites for new schools.	***Consistent.*** No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities.

I.3.3 Open Space and Conservation Element

This purpose of this element is to guide the conservation, preservation, and/or development of open space and natural resources, including biological, cultural, mineral, and scenic resources. The Project's impacts with respect to species and habitat preservation, mineral resource extraction, and aesthetics are primarily addressed in Sections 4.2, *Aesthetics*, 4.5, *Biological Resources*, 4.6, *Cultural and Tribal Resources*, and 4.13, *Mineral Resources.* The Project site intermittently has

been cultivated for agricultural use for at least the past 10 years. No native vegetation communities nor any sensitive vegetation communities were identified within the Project site. The physical environmental impacts of the Project are described throughout the Draft EIR. Generally speaking, the Project would not contribute substantially to the degradation of natural resources after the implementation of mitigation measures. It would provide a source of renewable energy for use within California, increasing the productive capacity of the land while avoiding the types of pollution traditionally associated with fossil fuel energy sources.

The Open Space and Conservation Element of the Fresno County General Plan also evaluates the scenic resources of Fresno County and provides policies intended to protect the scenic resources of the County and ensure that development enhances those resources through various measures including identification, development review, acquisition, and other methods. The Project site has not been identified as a scenic resource. The Fresno County General Plan also includes policies intended to protect scenic resources along roadways of the County by identifying, developing, and maintaining scenic amenities along roads and highways in the County and ensuring that development enhances those resources. According to Policy OS-L.1, Fresno County has designated a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways. According to this element, the only designated scenic roadway in the vicinity of the Project site is Interstate 5 (6 miles west of the Project), which is designated as a scenic highway.

Project consistency with specific Open Space and Conservation Element policies is presented in **Table I1-5** below.

TABLE I1-5
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-A.25: The County shall minimize sedimentation and erosion through control of grading, cutting of trees, removal of vegetation, placement of roads and bridges, and use of off-road vehicles. The County shall discourage grading activities during the rainy season unless adequately mitigated to avoid sedimentation of creeks and damage to riparian habitat.	***Consistent.*** Section 4.8, *Geology, Soils, and Paleontological Resources*, includes an evaluation of potential erosion-related impacts and associated mitigation. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site could be replanted with low-growing plant species appropriate for maintaining soil quality. The Project does not include tree removal or construction in creeks or riparian areas.
Policy OS-A.26: The County shall continue to require the use of feasible and practical best management practices (BMPs) to protect streams from the adverse effects of construction activities and urban runoff.	***Consistent.*** The new impervious surfaces would not be adjacent to or otherwise directly connected to a distinct drainage channel. Section 4.8, *Geology, Soils, and Paleontological Resources*, includes an evaluation of potential erosion-related impacts. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site could be replanted with low-growing plant species appropriate for maintaining soil quality. The Project does not include tree removal or construction in creeks or riparian areas.

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
OS-C.1: Incompatible Mining Uses. The County shall not permit incompatible land uses within the impact area of existing or potential surface mining areas.	***Consistent.*** There is no current surface mining onsite. There is no indication or evidence that the clay, silt, and sand present on the Project site would be suitable for aggregate production of statewide or regional significance. Aggregate resources are widely available throughout the region and neither the SMGB nor Fresno County has officially designated the area as an aggregate resource area or mineral deposit of statewide or regional significance.
OS-C.2: Mineral Resource Zones. The County shall not permit land uses incompatible with mineral resource recovery within areas designated as Mineral Resource Zone 2 (MRZ-2).	***Consistent.*** The Project site is not within an MRZ.
OS-C.7: Mining Buffers. The County shall require that new non-mining land uses adjacent to existing mining operations be designed to provide a buffer between the new development and the mining operations. The buffer distance shall be based on an evaluation of noise, aesthetics, drainage, operating conditions, biological resources, topography, lighting, traffic, operating hours, and air quality.	***Consistent.*** There are no active mining claims within 25 miles of the Project site, nor is there any locatable mineral extraction activity within the Project site boundary.
OS-C.10: Mineral Resource Lands Protection. The County shall not permit land uses that threaten the future availability of mineral resource or prelude future extraction of those resources.	***Consistent.*** There is no current surface mining onsite. There is no indication or evidence that the materials present on the Project site would be suitable for aggregate production of statewide or regional significance. Neither the SMGB nor Fresno County has officially designated the area as an aggregate resource area or mineral deposit of statewide or regional significance.
OS-C.12: New Development Compatibility. The County shall ensure that new discretionary land use developments are compatible with existing and potential surface mining areas and operations as identified on the Mineral Resource Zone Maps prepared by the State Division of Mines and Geology and other mineral resource areas identified by the County.	***Consistent.*** The Project site is not within an MRZ. There are no active mining claims within 25 miles of the Project site, nor is there any locatable mineral activity within the Project site boundary.
OS-C.13: Oil and Gas Regulation Areas. Fresno County shall be divided into three areas for the regulation of oil and gas development. A) Urban areas including all land within one- fourth mile of the planned urban boundaries shown on adopted community plans. B) Established oil and gas fields as determined and updated by the California Division of Oil and Gas, excluding urban areas except where specifically included in these policies. C) Non-urban areas including all land not within either established oil and gas fields or urban areas.	**Consistent.** California Department of Conservation, Geologic Energy Management Division (CalGEM), indicates there are no known oil or gas wells located within the Project boundary. CalGEM advises that all wells identified on the Project site prior to, or during, development activities be tested for liquid and gas leakage.
Policy OS-E.1: The County shall support efforts to avoid the "net" loss of important wildlife habitat where practicable. In cases where habitat loss cannot be avoided, the County shall impose adequate mitigation for the loss of wildlife habitat that is critical to supporting special-status species and/or other valuable or unique wildlife resources. Mitigation shall be at sufficient ratios to replace the function, and value of the habitat that was removed or degraded. Mitigation may be achieved through any combination of creation, restoration, conservation easements, and/or mitigation banking. Conservation easements should include provisions for maintenance and management in perpetuity. The County shall recommend coordination with the U.S. Fish	***Consistent.*** The Project site does contain potentially suitable migratory corridors and breeding or nesting habitat for wildlife species, including San Joaquin kit fox; burrowing owls and other raptors, including Swainson's hawk, red-tailed hawk; and migratory birds. Implementation of Mitigation Measures 4.5-1 through 4.5-3, including preconstruction nesting bird surveys, would prevent potential impacts to these species. The Project Applicant would provide Worker Environmental Awareness Training, pre-construction surveys, monitor ground disturbing activities, restrict project activities to designated staging and access areas, cover exposed trenches and pipes to prevent entrapment, and impose speed limits onsite.

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
and Wildlife Service and the California Department of Fish and Game to ensure that appropriate mitigation measures and the concerns of these agencies are adequately addressed. Important habitat and habitat components include nesting, breeding, and foraging areas, important spawning grounds, migratory routes, migratory stopover areas, oak woodlands, vernal pools, wildlife movement corridors, and other unique wildlife habitats (e.g., alkali scrub) critical to protecting and sustaining wildlife populations.	
Policy OS-E.2: The County shall require adequate buffer zones between construction activities and significant wildlife resources, including both on-site habitats that are purposely avoided and significant habitats that are adjacent to the project site, in order to avoid the degradation and disruption of critical life cycle activities such as breeding and feeding. The width of the buffer zone should vary depending on the location, species, etc. A final determination shall be made based on informal consultation with the U.S. Fish and Wildlife Service and/or the California Department of Fish and Game.	**Consistent**. Burrowing owl have the potential to winter or nest on the Project site. Preconstruction clearance surveys and other minimization measures as described in Mitigation Measure 4.5-1 would ensure that no birds are impacted during construction.
Policy OS-E.3: The County shall require development in areas known to have particular value for wildlife to be carefully planned and, where possible, located so that the value of the habitat for wildlife is maintained.	***Consistent.*** The Project site does contain potentially suitable migratory corridors and breeding or nesting habitat for wildlife species, including San Joaquin kit fox; burrowing owls and other raptors, including Swainson's hawk, red-tailed hawk, and migratory birds. Implementation of Mitigation Measures 4.5-1 through 4.5-3, including preconstruction nesting bird surveys, would prevent potential impacts to these species. The Project owner would provide Worker Environmental Awareness Training, pre-construction surveys, monitor ground disturbing activities, restrict project activities to designated staging and access areas, cover exposed trenches and pipes to prevent entrapment, and impose speed limits onsite, and use wildlife-friendly fencing.
Policy OS-E.4: The County shall encourage private landowners to adopt sound wildlife habitat management practices, as recommended by the California Department of Fish and Game officials and the U.S. Fish and Wildlife Service.	***Consistent.*** The Project Applicant would provide Worker Environmental Awareness training, pre-construction surveys, monitor ground disturbing activities, restrict project activities to designated staging and access areas, cover exposed trenches and pipes to prevent entrapment, and impose speed limits onsite.
Policy OS-E.6: The County shall ensure the conservation of large, continuous expanses of native vegetation to provide suitable habitat for maintaining abundant and diverse wildlife populations, as long as this preservation does not threaten the economic well-being of the County.	***Consistent.*** This Project does not conflict with the County's ability to implement land conservation.
Policy OS-E.9: Prior to approval of discretionary development permits, the County shall require, as part of any required environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based upon field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant resources and/or special-status plants or animals. Such evaluation will consider the potential for significant impact on these resources and will either identify feasible mitigation measures or indicate why mitigation is not feasible.	***Consistent.*** Section 4.5, *Biological Resources*, contains an analysis of potential impacts to biological resources. The analysis presented in this section is based on a review of relevant literature, field reconnaissance surveys, and focused biological surveys. It also relies upon a Biological Resources Evaluation Report prepared by Tetra Tech (2021), which documents existing conditions and the findings of various biological surveys on the Project site and in the surrounding vicinity.

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-E.10: The County shall support State and Federal programs to acquire significant fish and wildlife habitat areas for permanent protection and/or passive recreation use.	***Not Applicable.*** The Project would not conflict with the County's ability to support programs.
Policy OS-E.16: The County should preserve, to the maximum extent practicable, significant wildlife migration routes such as the North Kings Deer Herd migration corridors and fawn production areas.	***Consistent.*** Potential Impacts to migration routes are described in Section 4.5, *Biological* Resources. The Project site is within the Pacific Flyway, a significant avian migration route. The Mendota Wildlife Area, located approximately 3 miles northeast of the Project site, is a recognized stopover location for migratory birds travelling along the Pacific Flyway. The Project would not physically affect the Pacific Flyway. There are no other important migratory routes, corridors, or wildlife nursery sites near the Project site.
Policy OS-E.18: The County should preserve, to the maximum possible extent, areas defined as habitats for rare or endangered animal and plant species in a natural state consistent with State and Federal endangered species laws.	***Consistent.*** There is potential habitat for burrowing owl, nesting raptors, Swainson's hawk, and San Joaquin kit fox; however, pre-construction surveys will ensure nesting areas are avoided.
Policy OS-E.19: The County should preserve areas identified as habitats for rare or endangered plant and animal species primarily through the use of open space easements and appropriate zoning that restrict development in these sensitive areas.	***Consistent.*** The Project site is zoned AE20, Exclusive Agricultural.
Policy OS-F.5: The County shall establish procedures for identifying and preserving rare, threatened, and endangered plant species that may be adversely affected by public or private development projects. The County shall require, as part of the environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based on field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant plant resources and/or special-status plant species. Such evaluation shall consider the potential for significant impact on these resources and shall either identify feasible mitigation measures or indicate why mitigation is not feasible.	***Consistent.*** No special-status plant species were identified on the Project site.
Policy OS-F.7: The County should encourage landowners to maintain natural vegetation or plant suitable vegetation along fence lines, drainage and irrigation ditches and on unused or marginal land for the benefit of wildlife.	***Consistent.*** No special-status plant species were identified on the Project site.
Policy OS-G.12: The County shall continue, through its land use planning processes, to avoid inappropriate location of residential uses and sensitive receptors in relation to uses that include but are not limited to industrial and manufacturing uses and any other use which have the potential for creating a hazardous or nuisance effect.	***Consistent.*** The nearest sensitive receptors to the Project site are rural residences located 90 feet from the Project site. Based on the results of a health risk assessment, the predicted worst case increase in cancer risk is below the San Joaquin Valley Air Pollution Control District (SJVAPCD) threshold. The Project would not be a significant source of criteria pollutant emissions or fugitive dust during operation and maintenance..
Policy OS-G.13: The County shall include fugitive dust control measures as a requirement for subdivision maps, site plans, and grading permits. This will assist in implementing the SJVUAPCD's particulate matter of less than ten (10) microns (PM_{10}) regulation (Regulation VIII). Enforcement actions can be coordinated with the Air District's Compliance Division.	***Consistent.*** The Project owner would submit a Fugitive Dust Control Plan to the SJVAPCD for review and approval. The Dust Control Plan shall meet the requirements in Rule 8021-1 and incorporate the Regulation VIII recommended fugitive dust control measures to reduce PM_{10} emissions to the extent practical.
Policy OS-G.14: The County shall require all access roads, driveways, and parking areas serving new commercial and industrial development to be	***Consistent.*** All disturbed areas, including storage piles, which are not being actively used for construction purposes, shall be effectively stabilized of dust emissions using water, chemical

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
constructed with materials that minimize particulate emissions and are appropriate to the scale and intensity of use.	stabilizer/suppressant, covered with a tarp or other suitable cover or vegetative ground cover.
Policy OS-G.15: The County shall continue to work to reduce PM_{10} and $PM_{2.5}$ emissions from County-maintained roads by considering shoulder treatments for dust control as part of road reconstruction projects.	***Consistent.*** The Project does not involve road reconstruction. Construction and operation of the Project will be implemented in compliance with SJVAPCD's Regulation VIII, Fugitive PM_{10} Prohibitions and the current $PM_{2.5}$ Plan.
Policy OS-H.2: The County shall strive to maintain a standard of five (5) to eight (8) acres of County-owned improved parkland per one thousand (1,000) residents in the unincorporated areas.	***Consistent.*** The Project would not be located on designated parkland, affect the amount of County-owned parkland, nor result in population growth within Fresno County. Therefore the Project would not conflict with the County's ability to maintain the parkland ratio established in this policy.
Goal OS-J: To identify, protect, and enhance Fresno County's important historical, archeological, paleontological, geological, and cultural sites and their contributing environment, and promote and encourage preservation, restoration, and rehabilitation of Fresno County's historically significant resources in order to promote historical awareness, community identify, and to recognize the County's valued assets that have contributed to past County events, trends, styles of architecture, and economy.	***Consistent.*** The Project would not conflict with the County's ability to protect cultural resources because the Project would not affect cultural resources. There are no historic structures remaining on the Project site.
Policy OS-J.1: Preservation of Historic Resources. The County shall encourage preservation of any sites and/or buildings identified as having historical significance pursuant to the list maintained by the Fresno County Historic Landmarks and Records Advisory Commission.	***Consistent.*** The Project would not impact preservation of historic sites or buildings. There are no historic structures remaining on the Project site.
Policy OS-J.2: Historic Resources Consideration. The County shall consider historic resources during preparation or evaluation of plans and discretionary development projects.	***Consistent.*** Section 4.6, *Cultural and Tribal Resources*, contains results of a records search and field survey for the County's consideration of the Project.
Policy OS-J.14: Sites Protection and Mitigation. The County shall require that discretionary development projects, as part of any required CEQA review, identify and protect important historical, archeological, paleontological, and cultural sites and their contributing environment from damage, destruction, and abuse to the maximum extent feasible. Project-level mitigation shall include accurate site surveys, consideration of project alternatives to preserve archeological and historic resources, and provision for resource recovery and preservation when displacement is unavoidable.	***Consistent.*** Section 4.6 provides an evaluation of potential Project impacts to cultural, archaeological, and historic resources. Section 4.8 analyzes potential impacts to paleontological resources. To evaluate the Project's potential effects on significant cultural resources, including prehistoric and historic archaeological sites, a cultural resources characterization and evaluation of the Project site were undertaken (Dudek 2020). These efforts included a literature review, a Native American contact program, geoarchaeological review, and field surveys for areas of potential permanent and temporary impacts where facilities would be installed. In the event that unknown archaeological resources are discovered during Project construction, the Project owner would implement Mitigation Measures 4.6-1 and 4.6-2, which require the retention of a qualified archaeologist and cultural resources awareness training, and which governs procedures in the event of inadvertent discovery of archaeological materials. Mitigation Measure 4.8-1 addresses unanticipated discovery of fossils by providing for WEAP training, evaluation, and preservation of paleontological resources.
Goal OS-K: To conserve, protect, and maintain the scenic quality of Fresno County and discourage development that degrades areas of scenic quality.	***Consistent.*** Project facilities including fencing, solar panels, and substation would be visible and would add industrial elements to an agricultural landscape. However, the Project would not block or impair any existing significant visual resources or significantly impact the local visual character.
Policy OS-K.1: The County shall encourage the preservation of outstanding scenic views, panoramas,	***Consistent.*** There are no designated scenic vistas within the viewshed of the entire Project site.

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
and vistas wherever possible. Methods to achieve this may include encouraging private property owners to enter into open space easements for designated scenic areas.	
Policy OS-K.4: The County should require development adjacent to scenic areas, vistas, and roadways to incorporate natural features of the site and be developed to minimize impacts to the scenic qualities of the site.	***Consistent.*** There are no designated scenic vistas within the viewshed of the entire Project site.
Goal OS-L: To conserve, protect, and maintain the scenic quality of land and landscape adjacent to scenic roads in Fresno County.	***Consistent.*** There are no designated state scenic highways within the Project vicinity; nor roadways that are eligible for scenic designation within the Project viewshed.
Policy OS-L.1: The County designates a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways.	***Consistent.*** There are no designated state scenic highways within the Project vicinity or roadways eligible for scenic designation within the Project viewshed.
Policy OS-L.3: The County shall manage the use of land adjacent to scenic drives and scenic highways based on the following principles: b. Proposed high voltage overhead transmission lines, transmission line towers, and cell towers shall be routed and placed to minimize detrimental effects on scenic amenities visible from the right-of-way.	***Consistent.*** There are no designated state scenic highways or roadways eligible for scenic designation within the Project viewshed.

I.3.4 Health and Safety Element

The Health and Safety Element outlines Fresno County's planning strategies regarding emergency management and response, fire hazards, flood hazards, seismic and geological hazards, airport hazards, hazardous materials, and noise. The Project's impacts with respect to safety are primarily addressed in Section 4.8, *Geology, Soils, and Paleontological Resources*, Section 4.10, *Hazards and Hazardous Materials,* and Section 4.14*, Noise and Acoustics*. The design of the Project, as well as mitigation measures recommended in this Draft EIR, consider the potential seismic, soil instability, flood, fire, waste, and other hazards that are present in the Project area or that could result as a consequence of Project implementation. Although the Project would not avoid all hazards, Project consistency with specific Health and Safety Element policies is presented in **Table I1-6** below.

I.3.5 Housing Element

The Housing Element provides the County's goals, policies, and programs for the development, improvement, and maintenance of housing within the unincorporated areas of the County. As described in Section 4.15, *Population and Housing*, the Project would not induce growth, nor would it displace people or housing. The Project does not propose or require new housing. This element is therefore not applicable to the Project.

TABLE I1-6
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-B.1: The County shall review project proposals to identify potential fire hazards and to evaluate the effectiveness of preventive measures to reduce the risk to life and property.	***Consistent.*** Section 4.20, *Wildfire*, includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. Regardless, fire prevention measures would be implemented in order to minimize fire risk.
Policy HS-B.5: The County shall require development to have adequate access for fire and emergency vehicles and equipment.	***Consistent.*** The Project site would be accessible to emergency vehicles.
Policy HS-B.8: The County shall refer development proposals in the unincorporated county to the appropriate local fire agencies for review of compliance with fire safety standards. If dual responsibility exists, both agencies shall review and comment relative to their area of responsibility. If standards are different or conflicting, the more stringent standards shall apply.	***Consistent.*** The Project owner would coordinate as needed with the Fresno County Fire District to address potential exposure to fire and other hazards in the Project site and would incorporated any standards or requirements required by the district.
Policy HS-D.3: The County shall require that a soils engineering and geologic-seismic analysis be prepared by a California-registered engineer or engineering geologist prior to permitting development, including public infrastructure projects, in areas prone to geologic or seismic hazards (i.e., fault rupture, groundshaking, lateral spreading, lurchcracking, fault creep, liquefaction, subsidence, settlement, landslides, mudslides, unstable slopes, or avalanche).	***Consistent.*** According to the geological site reconnaissance report prepared for the Project site (see Appendix G-1), geologic hazards at the site are not significant. There is no risk of fault rupture, and the Project would not lead to significant impacts related to seismic ground shaking, liquefaction, erosion, or subsidence.A Final Geotechnical Engineering evaluation will be completed prior to conditional use permit approval.
Policy HS-D.4: The County shall require all proposed structures, additions to structures, utilities, or public facilities situated within areas subject to geologic-seismic hazards as identified in the soils engineering and geologic-seismic analysis to be sited, designed, and constructed in accordance with applicable provisions of the Uniform Building Code (Title 24 of the California Code of Regulations) and other relevant professional standards to minimize or prevent damage or loss and to minimize the risk to public safety.	***Consistent.*** A site-specific soils engineering and geologic-seismic analysis has been prepared for the Project site (see Appendix G-1). The Project would be constructed in compliance with the geotechnical and seismic design criteria required for construction in accordance with the California Building Code (CBC).
Policy HS-D.5: Pursuant to the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code, Chapter 7.5), the County shall not permit any structure for human occupancy to be placed within designated Earthquake Fault Zones unless the specific provisions of the Act and Title 14 of the California Code of Regulations have been satisfied.	***Consistent.*** While the Project site is not within a mapped Seismic Hazard Zone, the site may be subject to strong earthquake-related ground shaking at some point during the lifetime of the facility due to the potential for relatively large earthquakes to the south and west of the Project site. The Project would be constructed in compliance with the geotechnical and seismic design criteria required for construction in accordance with the CBC. No Project structures are proposed to be sited in an earthquake fault zone.
Policy HS-D.8: The County shall require a soils report by a California-registered engineer or engineering geologist for any proposed development, including public infrastructure projects, that requires a County permit and is located in an area containing soils with high “expansive” or “shrink-swell” properties. Development in such areas shall be prohibited unless suitable design and construction measures are incorporated to reduce the potential risks associated with these conditions.	***Consistent.*** The geological reconnaissance report (Appendix G1) indicated that soils present at the Project site have a moderate to high potential for expansion. The Project would be required to comply with applicable building codes and structural improvements which would address any expansive soil hazards.

TABLE I1-6 (CONTINUED)
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-D.9: The County shall seek to minimize soil erosion by maintaining compatible land uses, suitable building designs, and appropriate construction techniques. Contour grading, where feasible, and revegetation shall be required to mitigate the appearance of engineered slopes and to control erosion.	***Consistent.*** The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site could be replanted with low-growing plant species appropriate for maintaining soil quality.
Goal HS-F: To minimize the risk of loss of life, injury, serious illness, and damage to property resulting from the use, transport, treatment, and disposal of hazardous materials and hazardous wastes.	***Consistent.*** The use, storage, transport, and disposal of hazardous materials in connection with the Project would be carried out in accordance with federal, state, and local regulations. BMPs in the SWPPP would minimize the risk of hazardous materials leakage include: reporting of spills of hazardous materials to the appropriate regulatory entities; immediate cleanup of hazardous materials spills; and excavation and appropriate disposal of contaminated soils.
Policy HS-F.1: The County shall require that facilities that handle hazardous materials or hazardous wastes be designed, constructed, and operated in accordance with applicable hazardous materials and waste management laws and regulations.	***Consistent.*** The use, storage, transport, and disposal of hazardous materials in connection with the Project would be carried out in accordance with federal, state, and local regulations.
Policy HS-F.3: The County, through its Hazardous Materials Incident Response Plan, shall coordinate and cooperate with emergency response agencies to ensure adequate Countywide response to hazardous materials incidents.	***Consistent.*** As identified in Section 4.10, *Hazards and Hazardous Materials,* the Project would not interfere with emergency response plans or times.
Policy HS-G.1: The County shall require that all proposed development incorporate design elements necessary to minimize adverse noise impacts on surrounding land uses.	***Consistent.*** Short-term construction and decommissioning activities would be exempt from the County's noise policies and standards because activities would occur between the hours of 6:00 a.m. and 9:00 p.m. on weekdays, or 7:00 a.m. and 9:00 p.m. on Saturdays and Sundays. Mitigation Measure 4.14-1b requires that the substation and invertors comply with the County noise standards through equipment selection and design measures.
Policy HS-G.4: So that noise mitigation may be considered in the design of new projects, the County shall require an acoustical analysis as part of the environmental review process where: a) Noise sensitive land uses are proposed in areas exposed to existing or projected noise levels that are "generally unacceptable" or higher according to the Chart HS-1: "Land Use Compatibility for Community Noise Environments;" b) Proposed projects are likely to produce noise levels exceeding the levels shown in the County's Noise Control Ordinance at existing or planned noise-sensitive uses.	***Consistent.*** Section 4.14 includes an analysis of noise impacts associated with the Project.
Policy HS-G.6: The County shall regulate construction-related noise to reduce impacts on adjacent uses in accordance with the County's Noise Control Ordinance.	***Consistent.*** Short-term construction and decommissioning Project activities would be exempt from the County's noise policies and standards because activities would occur between the hours of 6:00 a.m. and 9:00 p.m. on weekdays, or 7:00 a.m. and 9:00 p.m. on Saturdays and Sundays.

TABLE I1-6 (CONTINUED)
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-G.8: The County shall evaluate the compatibility of proposed projects with existing and future noise levels through a comparison to Chart HS-1, "Land Use Compatibility for Community Noise Environments."	***Consistent.*** With the incorporation of Mitigation Measure 4.14-1a, the Project would not exceed County noise standards and would not have a significant impact to noise levels.

I-2 Consistency with Fresno County's Solar Facility Guidelines

APPENDIX I2

Consistency with Fresno County's Solar Facility Guidelines

TABLE I2-1
PROJECT CONSISTENCY WITH FRESNO COUNTY SOLAR FACILITY GUIDELINES

Guideline	Consistency
1) Information shall be submitted regarding the historical agricultural operational/usage of the parcel including, specific crop type, for the last 10 years (if no agricultural operation in the last 10 years, specify when land was last in agricultural use).	Information regarding the historical agricultural operation of the Project site is provided in Section 4.3, *Agriculture and Forestry Resources*. A detailed 10-year crop history for the Project site is provided in the Reclamation Plan included in Draft EIR Appendix B.
2) Information shall be submitted that identifies the source of water for the subject parcel (surface water from irrigation district, individual well(s), conjunctive system). If the source of water is via district delivery, the applicant shall submit information documenting the allocations received from the irrigation district and the actual disposition of the water (i.e., utilized on-site or moved to other locations) for the last 10 years. If an individual well system is used, provide production capacity of each well, water quality data and data regarding the existing water table depth.	Information regarding Project water sources is described in Section 2.5.4.1, *Water and Wastewater*, and Section 4.19, *Utilities and Service Systems*. A Water Supply Assessment for the Project is provided in Appendix L.
3) Identify the current status of the parcel (Williamson Act Contract, Conservation Easement, retired land, etc.), the purpose of any easement and limitations of the parcel. The applicant shall submit a Title Report or Lot Book Guarantee for verification.	The current status of the parcels is detailed in Section 4.3, *Agriculture and Forestry Resources*. None of the parcels that make up the site is subject to a Williamson Act contract.
4) Identify (with supporting data) the current soil type and mapping units of the parcel pursuant to the standards of the California State Department of Conservation and the Natural Resources Conservation Service.	Soil types found on the Project site are described in Section 4.8, *Geology, Soils and Paleontological Resources.* Information provided with the Conditional Use Permit application submitted in May 2020 identifies soil types within the site as "Farmland of Statewide Importance" as determined by the Natural Resources Conservation Service. The State Department of Conservation's Farmland Mapping and Monitoring Program classifies the site as "Farmland of Local Importance."
5) List all proposed measures and improvements intended to create a buffer between the proposed solar facility and adjacent agricultural operations (detailed information must be shown on site-plan) and provide factual/technical data supporting the effectiveness of said proposed buffering measures.	Proposed buffers are shown on the Site Plan provided with the May 2020 application materials. They also are described in Section 4.3, *Agriculture and Forestry Resources*.
6) Provide a Reclamation Plan detailing the lease life, timeline for removal of the improvements and specific measures to return the site to the agricultural capability prior to installation of solar improvements. If the project is approved, adequate financial security to the satisfaction of the County shall be provided to ensure site reclamation. Financial security can be in the form of a cash deposit to be placed in a trust account by the County with additional deposits required as needed to adjust for inflation and/or a Letter of Credit to be renewed every year to adjust for inflation.	The Reclamation Plan is described in Section 2.5.7, *Decommissioning and Site Reclamation*, and provided in Draft EIR Appendix B.

TABLE I2-1 (CONTINUED)
PROJECT CONSISTENCY WITH FRESNO COUNTY SOLAR FACILITY GUIDELINES

Guideline	Consistency
7) Provide information documenting efforts to locate the proposed solar facility on non-agricultural lands and non-contracted parcels and detailed information explaining why the subject site was selected.	The evaluation of Project alternatives is described in Chapter 3, *Alternatives*.
8) Develop and submit a project site pest management plan to identify methods and frequency to manage weeds, insects, disease and vertebrate pests that may impact adjacent sites.	A Weed Control Plan is provided in Draft EIR as Appendix H2. A Rodent Control Plan is provided as Appendix H3.
9) The applicant must acknowledge the County's Right to Farm Ordinance and shall be required to record a Right to Farm Notice prior to issuance of any permits. This shall be included as a recommended condition of approval of the land use entitlement.	EDPR CA Solar Park IV, LLC, stated its intent to comply with all County requirements associated with the Right to Farm Policy and Ordinance in the May 2020 application materials. Recordation of this notice will be included as a condition of approval.
10) Note: The life of the approved land use permit will expire upon expiration of the initial life of the solar lease. If the solar lease is to be extended, approval of new land use permit will need to be obtained.	Not applicable. The Project site is currently owned by Westlands Water District, and is under a purchase option agreement with the Applicant, who intends to purchase the land prior to starting Project construction. Because the Project site will be owned by the Applicant, there will be no solar lease.
11) If the project is approved, the applicant shall make all reasonable efforts to establish a point of sale in Fresno County for equipment and construction related items necessary for the project.	As stated in materials accompanying the Applicant's March 2020 Conditional Use Permit application, the Applicant has committed to making reasonable efforts to establish a point of sale in Fresno County.
12) If the project is approved, the applicant shall make all reasonable efforts to conduct local recruitment efforts and/or coordinate with employment agencies in an attempt to hire from the local workforce.	As stated in materials accompanying the Applicant's March 2020 Conditional Use Permit application, the Applicant has committed to making reasonable efforts to hire from the local workforce.
13) In addition to disclosing the number of trips in the required project Operational Statement, the applicant shall disclose the weight of the shipments anticipated to the site. If the project is approved, pursuant to the CEQA analysis and based upon the existing road conditions and the weight/frequency of shipments to the site, the applicant shall mitigate impacts to County roads.	The Traffic Study prepared for the Project (see Appendix K) included an analysis of potential pavement impacts, as required by Fresno County. Pavement impacts are analyzed based on a comparison of the Traffic Index (TI) with the Project to the TI without the Project. Based on the County's thresholds, the TI analysis concluded that construction of the Project would result in a significant impact to West Manning Avenue and West Adams Avenue. Implementation of Mitigation Measures 4.18-2 (Preconstruction and Pre-decommissioning Road Survey Report) and 4.18-3 (Road Repair Agreement) would reduce the impact to less than significant.
14) If the project is approved, the applicant shall make all reasonable efforts to purchase products and equipment from local (Fresno County) manufacturing facilities and./or vendors.	As stated in materials accompanying the Applicant's March 2020 Conditional Use Permit application, the Applicant has committed to making reasonable efforts to purchase products and equipment from local manufacturers and vendors.

Appendix A Field Noise Level Measurement Data
Appendix B Construction Noise Model Data

1 Introduction

The proposed Sonrisa Solar and Energy Storage Project represents the "Project" for purposes of this noise technical report. The Applicant proposes to construct and operate the Project on approximately 1,700 acres in Fresno County. The Project would be an up to 200 megawatts (MW) alternating current (AC) photovoltaic (PV) solar energy facility with associated on-site substation, inverters, operations and maintenance (O&M) building, fencing, roads, and supervisory control and data acquisition (SCADA) system. A proposed energy storage component is included, which would employ a battery system with a battery storage capacity up to 40 MW, and a battery storage duration of 4 hours. The Project would also include an overhead generation tie line (gen-tie line), which would extend from the on-site substation to the existing Tranquillity 230 kV switchyard located approximately 2.5 miles from the site.

1.1 Document Overview

This noise technical report provides a noise and vibration analysis of the construction and operation of the Project for the purposes of environmental review under CEQA. Evaluation of the potential noise and vibration impacts associated with construction and operation of the Project are compared with relevant local, state, and federal regulations and applicable significance thresholds under the California Environmental Quality Act (CEQA).

1.2 Project Description

1.2.1 Location and Site Description

The Project site is located in the San Joaquin Valley of California, approximately 9.5 miles east of Interstate 5 (I-5), 8.5 miles south of the City of Mendota, and immediately east of State Route 33 (SR-33). Refer to *Figure 1*, Project Location, for an illustration of the Project location and site boundaries. The Project site is generally bordered to the north and south by West Adams Avenue and West Manning Avenue, and bounded on the west by South Derrick Avenue (also known as SR-33), respectively. A gen-tie line would extend southwest from the Project site to the existing PG&E Tranquillity 230-kV electrical switchyard.

1.2.2 Solar Energy Generation System

The Project includes up to a 200 MW solar power generating installation. The 1,700-acre site would house all structures, including solar panels, single-axis tracking support structures, inverters, SCADA, and interconnection facilities (on-site substation), all of which would be enclosed by a perimeter security fence. The gen-tie line would be located off-site. The proposed site plan is shown on *Figure 2*. Solar energy would be captured by PV panels mounted to a single-axis system. The panels are arranged in series to effectively increase output voltage to approximately 1,500 volts. These series chains of panels are called "strings" in industry terms and provide the basic building block of power conversion in the solar array. The strings are combined in the solar field through an above- or below-ground DC collection system, and then further ganged together at the inverter stations, where the energy is converted to AC and then stepped to an intermediate voltage, typically 34.5 kV.

Site Plan With Proposed Development

Sonrisa Solar Park Project

DUDEK

INTENTIONALLY LEFT BLANK

The racking system would be supported, when practical, by driven piers (piles) directly embedded into the ground, and would be parallel to the ground. The single-axis tracking system would rotate slowly throughout the day at a range of +/- 60 degrees facing east to west to stay perpendicular to the incoming solar rays so that energy production would be optimized. The inverter stations would be up to 12 feet in height and perform three critical functions for the solar plant: (1) collect DC power in a central location, (2) convert the DC power into AC power, and (3) convert low-voltage AC power to medium-voltage AC power. The inverter stations are typically open-air. The stations consist of DC collection equipment, utility-scale inverters, and a low- to medium-voltage transformer. The output power from the inverter stations is then fed to the AC collection system through an above- or belowground collection system. This AC collection system would deliver the electricity to the on-site substation, where the voltage would be stepped up through a transformer to the interconnection voltage.

1.2.3 On-Site Substation

The Project on-site substation would be the termination point of the collection system for 34.5 kV electricity. The output of the entire field would be passed through a final interconnection step-up transformer to convert it to the grid tie voltage, anticipated to be 75 kV. Additionally the Project on-site substation would host the grid intertie safety equipment and switches required to interconnect to the high-voltage transmission system. The open-air on-site substation would be constructed along the west side of South Monterey Avenue and along the north side of West South Avenue.

1.2.4 Energy Storage System and Operations/Maintenance Building

Adjacent to the north of the on-site substation, an energy storage system and O&M building are proposed. The energy storage batteries and bi-directional inverters would be housed in a structure or container boxes and would be located on approximately 2 acres of the Project site. The O&M building would be approximately 6,000 square feet in size. The maximum height of the structures, boxes, or trailers would be up to 25 feet.

The energy storage facilities would also have heating, ventilation, and air conditioning (HVAC) in areas with batteries to maintain energy efficiency; the O&M building would also have HVAC. Power to the heating, ventilation, and air conditioning and lighting, among others, would be provided through a connection to the on-site station service transformer with connection lines installed above- and/or belowground. Approximately 7 employees would staff the site, housed in the O&M building. Periodic inspections/maintenance would be performed as necessary.

1.2.5 Generation Tie Line

The energy from the solar energy generation and energy storage systems would be transported from the on-site substation to the existing 230-kV Tranquillity switchyard through a gen-tie line. The route of the gen-tie line is to be determined, but would extend approximately 2.5 miles from the facility's on-site substation the PG&E Tranquillity switchyard (see Figure 2). The gen-tie line would consist of one or two single-circuit structures, which could be constructed with up to 150-foot-tall wood, concrete, or steel poles.

1.2.6 Sonrisa Interconnection Facilities

To accommodate the Solar Facility and interconnect the Project's proposed 230 kV gen-tie line to the PG&E Switching Station, PG&E would complete improvements to its electrical facilities, including expansion of the existing

Tranquillity Switching Station and construction of a new 230 kV transmission line. The Tranquillity Switching Station would be expanded to the north approximately 200 feet, increasing the size of the switching station by approximately three acres, to accommodate a new bay for the Project as well as a potential additional bay to accommodate future projects. This expansion would preserve a buffer area of approximately 100 feet from the existing solar array to the north (refer to Figure 1). The switching station's electrical busbar (a conducting bar that carries heavy currents to supply several electric circuits) would not increase in size. The new 230 kV transmission line would extend from the Tranquillity Switching Station to a point located just east of the existing substation. The PG&E transmission line would include approximately 1,900 feet of 230 kV conductor strung on approximately six new or existing tubular steel poles that would be approximately 140 feet high.

1.3 Project Vicinity Noise Sensitive Receivers

Land uses that are considered to be noise sensitive receivers include residences, overnight lodging facilities, hospitals, churches and schools. Scattered rural residences exist in the vicinity of the Project site, including several residences immediately adjacent to portions of the northern site boundaries. The closest noise-sensitive receptors are represented by several residences clustered together on the north side of West Adams Avenue, across from the western portion of the Project site (between South Derrick Avenue and South Monterey Avenue). These residences are as close as approximately 165 feet from the northern site boundary.

Another residence is located on a parcel along the south side of Adams Avenue, along the east side of South Monterey Avenue; this residence is located approximately 165 feet from the eastern project boundary, across South Monterey Avenue. An additional residence exists on a parcel along the south side of West Adams Avenue, excluded from the project site, but bounded by the Project on the west, south, and east (west of South Merced Avenue). The residence on this parcel is located approximately 315 feet from the closest project site boundary.

The closest residence to the west of the Project boundary is on South Ohio Avenue, just north of West Adams Street; this residence is approximately 5,400 feet (just over a mile) west of the project boundary.

The closest residence to the south of the Project is located on the south side of West Dinuba Avenue, immediately west of SR-33; this residence is located approximately 5,400 feet from the closest project boundary. This residence is also the closest receptor to the proposed gen-tie line, at approximately 1,600 feet from the closest point of the gen-tie line. Regarding the PG&E interconnection upgrades, this is also the closest receiver, and is located approximately 4,100 feet east of the Tranquillity Switching Station and 1,550 feet south of the new 230 kV transmission line.

The closest residence to the east of the Project site is located along the north side of West Adams Avenue, approximately 2.5 miles east of the eastern project boundary. These noise-sensitive receives are depicted on *Figure 3*, in relation to the Project boundaries.

2 Fundamentals of Noise & Vibration

The following is a brief discussion of fundamental sound (noise) and vibration concepts and basic terminology.

2.1 Fundamentals of Sound

Vibrations, traveling as waves through air from a source, exert a force perceived by the human ear as sound. Sound pressure level (referred to as sound level) is measured on a logarithmic scale in decibels (dB) that represent the fluctuation of air pressure above and below atmospheric pressure. Frequency, or pitch, is a physical characteristic of sound and is expressed in units of cycles per second or hertz (Hz). The normal frequency range of hearing for most people extends from about 20 to 20,000 Hz. The human ear is more sensitive to middle and high frequencies, especially when the sound levels are quieter. As sound levels get louder, the human ear starts to hear the frequency spectrum more evenly. To accommodate for this phenomenon, a weighting system to evaluate how loud a sound level is to a human was developed. The frequency weighting called "A" weighting is typically used for quieter sound levels which de-emphasizes the low frequency components of the sound in a manner similar to the response of a human ear. This A-weighted sound level is called the "sound level" and is referenced in units of dBA. Sound levels discussed in this report are all using the dBA weighting system.

"Noise" is distinguished from sound as "an unwanted or undesirable sound". This may derive from the absolute level of the sound (too loud to talk over or disruptive for sleep), or the character of the sound (very high pitched or associated with an impact or explosion). Most sounds in an urban environment would qualify as "noise" given the potential for annoyance to be associated with typical urban sound sources (i.e., traffic, etc.).

Since sound is measured on a logarithmic scale, a doubling of sound energy results in a 3 dBA increase in the sound level. Changes in a community noise level of less than 3 dBA are not typically noticed by the human ear. Changes from 3 to 5 dBA may be noticed by some individuals who are extremely sensitive to changes in noise. A 5 dBA increase is readily noticeable (Caltrans 2011). The human ear perceives a 10 dBA increase in sound level as a doubling of the sound level (i.e., 65 dBA sounds twice as loud as 55 dBA to a human ear).

An individual's noise exposure occurs over a period of time; however, noise level is a measure of noise at a given instant in time. Community noise sources vary continuously, being the product of many noise sources at various distances, all of which constitute a relatively stable background or ambient noise environment. The background, or ambient, noise level gradually changes throughout a typical day, corresponding to distant noise sources, such as traffic volume, as well as changes in atmospheric conditions.

Noise levels are generally higher during the daytime and early evening when traffic (including airplanes), commercial, and industrial activity is the greatest. However, noise sources experienced during nighttime hours when background levels are generally lower can be potentially more conspicuous and irritating to the receiver. In order to evaluate noise in a way that considers periodic fluctuations experienced throughout the day and night, a concept termed "community noise equivalent level" (CNEL) was developed, wherein noise measurements are weighted, added, and averaged over a 24-hour period to reflect magnitude, duration, frequency, and time of occurrence. A complete definition of CNEL and other terminology used to describe noise is provided in Table 1.

Table 1 Definitions of Acoustical Terminology

Term	Definition
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of two like quantities
Sound Pressure Level (SPL)	10 times the logarithm to the base 10 of the ratio between the square of the sound to the square of the reference sound pressure of 20 µPascals. Sound pressure level is the quantity that is measured by a sound level meter, expressed in dB.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz.
A-Weighted Sound Level (dBA)	SPL in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de- emphasizes low and high frequency components of frequency components of sound in a manner similar to the frequency response of the human ear and correlates well with subjective response to sound. All sound levels in this report are A-weighted.
Noise	Unwanted sound.
Equivalent Sound Level (Leq)	The average A-weighted sound level during the measurement period. For this CEQA evaluation, Leq refers to a one-hour period unless otherwise stated.
Lmax, Lmin	The maximum and minimum A-weighted sound level during the measurement period.
L01, L10, L50, L90	The A-weighted sound levels that are exceeded l%, l0%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level (Ldn)	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured during the night between 10pm and 7 am.
Community Noise Equivalent Level (CNEL)	The average A-weighted sound level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7 p.m. to 10 p.m. and after addition of 10 decibels to sound levels during the night between 10 p.m. and 7 a.m.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Impulsive Noise	Noise loud enough to disrupt normal activities and usually lasting less than one second.

For reference in understanding the magnitude of noise levels descried in this report, examples of typical noise levels for common indoor and outdoor activities with which the reader should be familiar are presented in Table 2.

Table 2. Typical Sound Levels in the Environment and Industry

Common Outdoor Activities	Noise Level (dB)	Common Indoor Activities
—	110	Rock band
Jet fly over at 300 meters (1,000 feet)	100	—
Gas lawn mower at 1 meter (3 feet)	90	—
Diesel truck at 15 meters (50 feet), at 80 kilometers per hour (50 miles per hour)	80	Food blender at 1 meter (3 feet); garbage disposal at 1 meter (3 feet)
Noisy urban area, daytime; gas lawn mower at 30 meters (100 feet)	70	Vacuum cleaner at 3 meters (10 feet)
Commercial area; heavy traffic at 90 meters (300 feet)	60	Normal speech at 1 meter (3 feet)
Quite urban, daytime	50	Large business office; dishwasher next room
Quite urban, nighttime	40	Theater; large conference room (background)
Quite suburban, nighttime	30	Library
Quite rural, nighttime	20	Bedroom at night; concert hall (background)
—	10	Broadcast/recording studio
Lowest threshold of human hearing	0	Lowest threshold of human hearing

Source: Caltrans 2013.
Note: dB = decibel

2.2 Sound Propagation

2.2.1 Exterior Noise Distance Attenuation

Noise sources are classified in two forms: (1) point sources, such as stationary equipment or a group of construction vehicles and equipment working within a spatially limited area at a given time, and (2) line sources, such as a roadway with a large number of pass-by sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6.0 dBA for each doubling of distance from the source to the receptor at acoustically "hard" sites and at a rate of 7.5 dBA for each doubling of distance from source to receptor at acoustically "soft" sites. Sound generated by a line source (i.e., a roadway) typically attenuates at a rate of 3 dBA and 4.5 dBA per doubling distance, for hard and soft sites, respectively. Sound levels can also be attenuated by man-made or natural barriers. For the purpose of sound attenuation discussion, a "hard" or reflective site does not provide any excess ground-effect attenuation and is characteristic of asphalt or concrete ground surfaces, as well as very hard-packed soils. An acoustically "soft" or absorptive site is characteristic of unpaved loose soil or vegetated ground..

2.2.2 Structural Noise Attenuation

When just breaking the line of site between a source and a receiver, approximately 5 dB of attenuation can be expected. An upper limit for sound reduction because of an exterior wall or solid sound barrier is approximately 20 dB (Caltrans 2011). Structures can also provide noise reduction by insulating interior spaces from outdoor noise. The outside-to-inside noise attenuation provided by typical structures in California ranges between 17 to 30 dBA with open and closed windows, respectively, as shown in Table 3.

Table 3. Outside-to-Inside Noise Attenuation (dBA)

Building Type	Open Windows	Closed Windows[1]
Residences	17	25
Schools	17	25
Churches	20	30
Hospitals/offices/hotels	17	25
Theaters	17	25

Source: Caltrans 2011.
Note: [1] Structures with closed windows can attenuate exterior noise by a minimum of 25 to 30 dBA.

2.3 Groundborne Vibration Fundamentals

Vibration is an oscillatory motion that can be described in terms of displacement, velocity, or acceleration. Heavy equipment operation, including stationary equipment that produces substantial oscillation or construction equipment that causes percussive action against the ground surface, may be experienced by building occupants as perceptible vibration. It is also common for ground-borne vibration to cause windows, pictures on walls, or items on shelves to rattle. Although the perceived vibration from such equipment operation can be intrusive to building occupants, the vibration is seldom of sufficient magnitude to cause even minor cosmetic damage to buildings.

Groundborne vibration generated by construction projects is usually highest during pile driving, rock blasting, soil compacting, jack hammering, and demolition-related activities. Next to pile driving and soil compacting, grading activity has the greatest potential for vibration impacts if large bulldozers, large trucks, or other heavy equipment are used. A conservative maximum vibration level standard is 0.2 in/sec PPV for the prevention of structural damage to typical residential buildings (Caltrans 2013).

The calculation to determine PPV at a given distance is as follows:

$$PPV_{distance} = PPV_{ref} * (25/D)^{1.5}$$

Where:

PPV_{equip} = peak particle velocity in inches per second of the equipment adjusted for distance

PPV_{ref} = reference vibration level in inches per second at 25 feet

D = distance from the equipment to the receiver

3 Regulatory Setting

3.1 Federal Transit and Railroad Administration Standards

Although the FTA standards are intended for federally funded mass transit projects, the impact assessment procedures and criteria included in the FTA *Transit Noise and Vibration Impact Assessment Manual* (2006) are routinely used for projects under review by local jurisdictions that have not adopted their own vibration impact standards. The FTA and Federal Railroad Administration have published guidelines for assessing the impacts of groundborne vibration associated with rail projects, which have been applied by other jurisdictions to other types of projects. The FTA measure of the threshold of architectural damage for conventional sensitive structures from groundborne vibration is 0.2 inches/second PPV (FTA 2006).

3.2 California Noise Control Act of 1973

Sections 46000 through 46080 of the California Health and Safety Code, known as the California Noise Control Act of 1973, find that excessive noise is a serious hazard to public health and welfare and that exposure to certain levels of noise can result in physiological, psychological, and economic damage. It also finds that there is a continuous and increasing bombardment of noise in the urban, suburban, and rural areas. The act declares that the State of California has a responsibility to protect the health and welfare of its citizens through the control, prevention, and abatement of noise. It is the policy of the state to provide an environment for all Californians free from noise that jeopardizes their health or welfare.

3.3 California Environmental Quality Act (CEQA)

CEQA requires that all known environmental effects of a project be analyzed, including environmental noise impacts. Under CEQA, a project has a potentially significant impact if the project generates noise levels in excess of noise thresholds, which can include standards established in the local general plan or noise ordinance.

3.4 California Department of Transportation (CalTrans)

The California Department of Transportation provides guidance for construction-induced vibration. Table 4 includes a summary of human response to transient vibration PPV.

Table 4. Human Response to Transient Vibration

Human Response	PPV (Inches/Second)
Severe	2.0
Strongly perceptible	0.9
Distinctly perceptible	0.24
Barely perceptible	0.035

Source: Caltrans 2004.
Note: PPV = peak particle velocity

3.5 Local

The County has the following two documents that address noise:

- County Noise Ordinance includes Chapter 8.40, Noise Control (Fresno County 2017)
- *Fresno County General Plan Update Public Review Draft Environmental Impact Report* (General Plan Update EIR) includes Chapter 4.15, Noise (Fresno County 2000a)
- *Fresno County General Plan Update Revised Public Review Draft Background Report* (Fresno County 2000b)

3.5.1 Fresno County Noise Ordinance

The County Noise Ordinance specifically lists "any affected single- or multiple-family residence, school, hospital, church or public library" as noise-sensitive receptors (Fresno County 2017). Table 5 summarizes maximum acceptable noise levels.

Table 5. Fresno County Exterior Noise Level Standards

Category	Cumulative Number of Minutes in Any 1-Hour Period	Equivalent Statistical Value	Noise Level Standards (dBA)	
			Daytime (7:00 a.m. to 10:00 p.m.)	*Nighttime (10:00 p.m. to 7:00 a.m.)*
1	30	L_{50}	50	45
2	15	L_{25}	55	50
3	5	$L_{8.3}$	60	55

5	0	L_{max}	70	65

Source: Fresno County 2017.
Note: dBA = A-weighted decibel

A penalty of 5 dBA shall be given to simple tone noise, noises consisting primarily of speech or music, or for recurring impulsive noises.

The following activities are identified to be exempted from the provisions of the County Noise Ordinance (Ordinance 602, Section 1, Fresno County 2017):

B. Any mechanical device, apparatus or equipment used, related to or connected with emergency activities or emergency work;

C. Noise sources associated with construction, provided such activities do not take place before six a.m. or after nine p.m. on any day except Saturday or Sunday, or before seven a.m. or after five p.m. on Saturday or Sunday;

G. Noise sources associated with work performed by private or public utilities in the maintenance or modification of its facilities;

H. Noise sources associate with the drilling or redrilling of petroleum, gas, injection or water wells;

I. Noise sources associated with the collection of waste or garbage from property devoted to commercial or industrial uses.

The County Noise Ordnance also contains specific limitations to particular land uses or activities (Ordinance 602, Section 1, Fresno County 2017) [which is interpreted to apply at the property boundary of any noise sensitive use located adjacent to the mechanical equipment source]:

> Air conditioning and refrigeration exterior noise level shall not exceed fifty dBA for such equipment installed or in use after July 1, 1980.

3.5.2 Fresno County General Plan Update (2000)

According to the Fresno County General Plan Update, "the County standards apply specifically to noise exposure at residences, school, hospitals, churches, and libraries" (Fresno County 2000).

The General Plan Update, Health and Safety Element, also contains the following policies to address community noise within the County.

Policy HS-G.6 The County shall regulate construction-related noise to reduce impacts on adjacent uses in accordance with the County's Noise Control Ordinance.

Policy HS-G.7 Where existing noise-sensitive uses may be exposed to increased noise levels due to roadway improvement projects, the County shall apply the following criteria to determine the significance of impact:

a. Where existing noise levels are less than 60 dB_{Ldn} at outdoor activity areas of noise-sensitive uses, a 5 dB_{Ldn} increase in noise levels will be considered significant;

b. Where existing noise levels are between 60 and 65 dB_{Ldn} at outdoor activity areas of noise-sensitive uses, a 3 dB_{Ldn} increase in noise levels will be considered significant; and

c. Where existing noise levels are greater than 65 dB_{Ldn} at outdoor activity areas of noise-sensitive uses, a 1.5 dB_{Ldn} increase in noise levels will be considered significant.

Policy HS-G.8 The County shall evaluate the compatibility of Proposed Projects with existing and future noise levels through a comparison to Chart HS-1, "Land Use Compatibility for Community Noise Environments" [reproduced below as Table 7, Maximum Allowable Noise Exposure by Land Use].

Table 6. Maximum Allowable Noise Exposure by Land Use

Noise Level (CNEL)							
	0–55	*56–60*	*61–65*	*66–70*	*71–75*	*75–80*	*81–85*
Residential – low density single family, mobile homes							
Residential: multiple family							
Office buildings, business commercial and professional							
Industrial, manufacturing, utilities, agriculture							

Source: Fresno County 2000b.
Note: CNEL = community noise level equivalent

Normally acceptable. Specified land use is satisfactory, based on the assumption that any buildings involved are of normal, conventional construction, without any special noise insulation requirements.

Conditionally Acceptable. New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed insulation features have been included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

Generally Unacceptable. New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Land Use Discouraged. New construction or development should generally not be undertaken.

4 Existing Ambient Noise Levels

Residences exist adjacent to the Project site and in the general vicinity; these residences are each located fairly closely to either local roadways or State Route 33, with traffic noise exposure affecting each of these residential properties to some degree. The closest adjacent residences are north of the Project site, along the north and south frontages of Adams Avenue; these residences are as close as approximately 165 feet from the northern site boundary. Residences to the west and east of the Project site are also located along Adams Avenue. The closest residence to the south of the Project is located on the south side of West Dinuba Avenue, immediately west of SR-33; this residence is located approximately 5,400 feet from the closest project boundary. These single-family residences are the focus of the noise measurements and analysis.

4.1 Ambient Noise Levels

Because the closest noise-sensitive uses (residences) to the project site are located along West Adams Avenue, and because the ambient noise levels at these residences are primarily the result of traffic along Adams Avenue, a long-term noise measurement was completed adjacent to Adams Avenue, to characterize existing ambient noise levels at these residences. The 24-hour noise measurement was conducted along the West Adams Avenue northern frontage of the noise-sensitive receptor identified on Figure 3 between South Derrick Avenue on the west and South Monterey Avenue on the east. The measurement was made using a SoftdB Piccolo 3 integrating sound level meter equipped with a ½-inch pre-polarized condenser microphone with pre-amplifier. When equipped with this microphone, the sound level meter meets the current American National Standards Institute standard for a Type 2 general purpose sound level meter. The sound level meter was positioned at a height of approximately three feet above the ground. Table 7 provides summary results of the 24-hour measurements and CNEL calculation. Refer to *Appendix A* for the 24-hour measurement data and calculation of CNEL.

Table 7. Ambient Noise Data Summary and CNEL Calculation Results

Site	Date/Time	Range in Measured Hourly L_{eq} (dBA)	CNEL
Residential Property Midway Between South Derrick and South Monterey on West Adams	9 a.m. 12/7/2020 to 9 a.m. 12/8/2020	Daytime: 54 to 64 Nighttime: 37 to 61	62 dBA

The measurement was located along the north side of Adams Avenue, 15-feet from the edge of pavement (25 feet from the roadway centerline). The calculated CNEL at the measurement point (25 feet from the road centerline) is 62 dBA. The closest edge of the yard associated with the residence on this lot is approximately 120 feet from the roadway centerline. Using the standard outdoor attenuation rate for a line source (applicable to a roadway), the predicted existing noise level near the residence is 56 dBA CNEL . This ambient noise level is below the limit for "normally acceptable" exterior noise level for residences (i.e., 60 dBA CNEL).

INTENTIONALLY LEFT BLANK

5 Thresholds of Significance

According to Appendix G of the CEQA Guidelines (14 CCR 15000 et seq.), a significant impact related to noise would occur if the Project would:

A. Result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

B. Result in generation of excessive groundborne vibration or groundborne noise levels.

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Threshold A

Table 5 shows noise level standards from the County Noise Ordinance. The applicable standard for a new noise source that could affect a residential parcel is the Category 1 noise metric (L_{50}) as this metric aligns very closely with the L_{eq} metric for routine mechanical equipment operations. Accordingly, a 50 dBA L_{eq} limit applies during the daytime (7:00 a.m. to 10:00 p.m.), while a 45 dBA dBA L_{eq} limit applies during the nighttime (10:00 p.m. to 7:00 a.m.). Therefore, if a proposed project would generate noise levels in excess of 50 dBA L_{eq} during the daytime or 45 L_{eq} during the nighttime, such noise generation would constitute a significant noise impact (Fresno County 2017).

Construction is the most common source of temporary noise increases related to proposed developments (projects). Construction noise increases are not considered significant due to an exemption in the County Noise Ordinance addressing construction activities, as long as the construction hours are limited to between 6:00 a.m. and 9:00 p.m. on any day expect for Saturday and Sunday. On Saturday and Sunday, construction can occur between 7:00 a.m. and 5:00 p.m. A quantitative analysis of the construction noise using the Roadway Construction Noise Model (RCNM) is included in this noise technical report for informational purposes. Outside of the allowable hours, construction would be subject to the Exterior Noise Level Standards listed in Table 5 at the nearest residential receptors (Fresno County 2017)

Threshold B

The FTA threshold of 0.2 inches/second for damage for conventional sensitive structures will be used as a significance criterion for construction related vibration. Therefore, if construction-related groundborne vibration were to exceed 0.2 inches/second at existing residences near the Project site, this would constitute a significant vibration impact.

Threshold C

The closest public airports to the project site include William Robert Johnston municipal airport in Mendota (8.5 miles north of the Project) and San Joaquin Airport (located 11 miles to the east of the Project). The Project is not within the airport land use planning area for these two airports, or within 2 miles of any public airport. There are also no private airstrips within a 2-mile radius of the Project site. As such, the Project would not be affected by airport-related noise sources. Consequently, airport noise is not evaluated in this noise technical report.

INTENTIONALLY LEFT BLANK

6 Noise Impact Analysis

6.1 Construction Noise and Vibration

6.1.1 Construction Noise

Construction scenario assumptions, including phasing, equipment mix, and vehicle trips, were based on information provided by the Applicant. Construction of the Project would be expected to commence in approximately October 2021 and would last approximately 15 months, ending in December 2022. The analysis contained herein is based on the following assumptions (some overlap of phases is expected to occur):

Table 8. Sonrisa Solar - Construction Duration and Equipment by Phase

Activity	Duration	Equipment	Pieces
Perimeter fence installation	3 months	Front-loader with auger	1
		4x4 forklift	1
		Flatbed truck	1
Site preparation and clearing/grading	3 months	Water truck – 3 axles	4
		Grader	2
		Bulldozer	1
		Scraper	1
		10-ton roller	2
		Sheepsfoot roller	2
		Tractor (with mower attachment)	1
Underground work (trenching)	4 months	Excavator	2
		Trenching machine	2
		Sheepsfoot roller	1
		Water truck – 3 axles	1
		Soil mix rig	1
		4x4 forklift	1
		Vibratory Pile Driver	5
System installation	8 months	4x4 forklift	10
		Small crane (80-ton)	1
		Dump Truck	5
		Vibratory Pile driver	5
		Pickup truck	1
		Water Truck	2
		5 kw generator	6
Gen-tie installation	2 months	Line truck (with spool trailer)	1
		Pick-Up	3
		Boom truck (with bucket)	1
Energy storage system	10 months	Backhoe	1
		Small crane	1
		Pickup truck	5
		4x4 forklift	4
Testing and commissioning, Site cleanup and restoration	3 months	Pickup truck	10
		Water Truck	1
		Grader	2
		Front-End loader	1

As indicated in the Project Description (Section 1.2) there are a number of rural residences in the vicinity of the project that could be affected by short-term construction noise generated by the Project. Table 9 provides a summary of the closest residences, including distance between each residence and the closest Project construction boundary.

Table 9. Noise-Sensitive Receivers (Residences) in Project Vicinity

Description	Distance From Construction Boundary
3 residences, north side of Adams Avenue, between Derrick & Monterey	165 feet
1 Residence, along east side of Monterey and along south side of Adams	165 feet
1 residence along south side of Adams, between Monterey and Merced	315 feet
1 residence along west side of Ohio and along north side of Adams	5400 feet
3 residences, along south side of Dinuba and along east side of Derrick	5400 feet

The County Noise Ordinance exempts noise sources associated with construction between the hours of 6:00 a.m. and 9:00 p.m. on weekdays and 7:00 a.m. and 5:00 p.m. on Saturday and Sunday (Fresno County 2017). Construction is anticipated to occur during the County's allowable hours of construction activities, and most deliveries are also expected to occur during those hours. A peak daily construction population of approximately 750 is anticipated, with an average of 350 workers daily. In addition to the 750 maximum daily workers traveling to the site, there could be up to 25 truck trips per day at peak construction activity (trenching and system installation phases overlap). Construction traffic would access the site via Derrick Road (SR33).

Construction of the proposed Project would generate noise that could expose nearby receptors (i.e. residences) to elevated noise levels that may disrupt communication and routine activities. The magnitude of the impact would depend on the type of construction activity, equipment, duration of the construction phase, distance between the noise source and receiver, and intervening structures. Noise from construction equipment generally exhibits point source acoustical characteristics. A point source sound is attenuated (or reduced) at a rate of 6 decibels per doubling of distance from the source for "hard site" conditions and at 7.5 decibels per doubling of distance for "soft site" conditions. These rules apply to the propagation of sound waves with no obstacles between source and receivers, such as topography (ridges or berms) or structures.

Construction equipment would include standard equipment such as vibratory pile (post) drivers, graders, scrapers, backhoes, loaders, dozers, water trucks, portable generators, and miscellaneous trucks. The maximum noise level ranges for various pieces of construction equipment at a distance of 50 feet are presented in Table 10. The maximum noise levels at 50 feet for typical equipment would range up to 95 dBA for the type of equipment normally used for this type of project. The typical operating cycles for construction equipment involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings. Thus, average noise levels associated with construction equipment operation are generally lower than the maximum noise levels indicated in Table 10.

Table 10. Typical Construction Equipment Noise Levels

Equipment Description	Acoustical Use Factor (%)	Equip Spec at 50 feet (Lmax dBA)	Actual Measured at 50 feet (Lmax dBA)
All other equipment > 5 horsepower	50	85	N/A
Auger drill rig	20	85	84
Backhoe	40	80	78
Compactor (ground)	20	80	83
Compressor (air)	40	80	78
Crane	16	85	81
Dozer	40	85	82
Dump truck	40	84	76
Excavator	40	85	81
Flatbed truck	40	84	74
Front-end loader	40	80	79
Generator	50	82	81
Grader	40	85	N/A
Man lift	20	85	75
Pickup truck	40	55	75
Roller	20	85	80
Scraper	40	85	84
Tractor	40	84	N/A
Vibratory Pile Driver	20	95	N/A

Source: FTA 2006.
Note: dBA = A-weighted decibel; L_{max} = maximum sound pressure level

The nearest point of construction activities to the closest single family residences vary from approximately 165 feet to 315 feet for immediately adjacent residences north of the project, and up to 5,400 feet for the closest residences south and west of the project. The closest residence to the east is 2.5 miles away. Thus, the distance from construction activities to the closest residences would be 165 feet, when construction activity is occurring along the boundary of the Project site. However, construction and activities would be distributed throughout the construction site, and would generally occur at distances much greater than 165 from existing residences.

The Federal Highway Administration's Roadway Construction Noise Model (RCNM) (FHWA 2008) was used to estimate construction noise levels at these noise-sensitive land uses. Although the model was developed by the FHWA, RCNM is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are also used to construct other project types. Input variables for RCNM consist of the receiver/land use types, the equipment type and number of each (e.g., two graders, a loader, a tractor), the duty cycle for each piece of equipment (e.g., percentage of each hour the equipment typically works per day), and the distance between the construction activity and noise-sensitive receivers. No topographical or structural shielding was assumed in the modeling of construction noise (i.e., the receivers are modelled with no obstacles to the travel of sound between the construction activity and receiver location, a worst-case assumption). The noise levels from

the proposed construction activities are summarized in Table 11. The complete set of RCNM input and output data for construction noise is provided in Appendix B. As shown, at the nearest residences, noise levels would range from approximately 71 to 91 dBA L_{eq} when construction is taking place at or near the project site boundary.

At the nearest point, the fence is planned to be located approximately 165 feet from the residential structures to the north. Some phases are expected to overlap. Specifically, the trenching and system installation phases are expected to overlap. It is expected that overlap will not include more equipment than a single phase to be operating at the same time along the construction boundary. Therefore, the results in Table 11 are considered reasonable data for the construction noise by phase. It should be noted the noise level values in Table 11 represent work occurring along the Project boundary adjacent to the closest residences, which would be anticipated to occur over only approximately 10 – 15% of the construction schedule. For the reminder of the time, construction activity would be taking place at further distances, throughout all the areas of the 1,700 acre site.

Table 11. Outdoor Construction Noise Levels by Phase

Construction Phase	Closest Residence 165' L_{eq} (dBA)	Residence 315' L_{eq} (dBA)	Residences 5400' L_{eq} (dBA)
Fence installation	71	65	41
Site preparation and clearing/grading	78	72	47
Underground work (trenching)	91	85	60
System installation	90	85	60
Gen-tie installation	67	NA	NA
ESS construction	76	71	46
Testing, commissioning, site cleanup	76	70	46

Notes: dBA = A-weighted decibel; ESS = energy storage system; L_{eq} = equivalent sound level; L_{max} = maximum sound pressure level

As shown in Table 11, construction-related noise levels could reach up to 91 dBA L_{eq} at existing residences to the north of the Project site. The County Noise Ordinance exempts construction activity noise from standard exterior noise exposure limits if conducted during specific hours (Fresno County 2017). As described in Section 1.2, Project Description, Project-related construction activity is expected to occur within the window of time covered by the County Noise Ordinance exemption. Considering the 25 dBA exterior to interior attenuation rate for typical residential construction, interior sound levels for the closest residences would not be expected to exceed 66 dBA L_{eq} when construction is occurring at the closest Project boundary to the nearest residence. Construction noise at this level could at times be annoying but would not be anticipated to interfere with conversation or other household activities in the daytime and evening periods.

Some construction-related activities could occur outside the hours the County Noise Ordinance exemption. These activities are expected to include lighter work, such as testing or inspection work that is not expected to create substantial noise. Construction-related activity associated with the Project is not expected to generate noise in excess of any locally established standards.

61.1.1 PG&E Interconnection Facilities Construction

PG&E would expand the Tranquillity Switching Station with a new bay for the Project as well as a potential additional bay to accommodate future projects. The equipment used for this construction is anticipated to be similar to the equipment identified for the Project energy storage system construction. The closest residence to this construction effort is located approximately 4,100 feet to the east. According to Table 10, noise levels for energy storage system construction would be 76 dBA L_{eq} at 165 feet, which would attenuate to approximately 54 dBA L_{eq} at this closest residence. PG&E would also construct a new 230 kV transmission line to extend from the Tranquillity Switching Station to a point located just east of the existing substation. The equipment used for this construction is anticipated to be similar to the equipment identified for the Project gen-tie installation. The closest residence to this construction effort is located approximately 1,550 feet to the south. According to Table 10, noise levels for gen-tie installation would be 67 dBA L_{eq} at 165 feet, which would attenuate to approximately 59 dBA L_{eq} at this closest residence. Construction noise levels for the PG&E interconnection facilities would fall below the noise levels identified for the closest receivers to the Project construction, and would therefore also not be anticipated to interfere with conversation or other household activities in the daytime and evening periods.

6.1.2 Construction Traffic Noise

Access to the Project site for construction equipment, supplies, and workers is available directly from State Route 33 (SR-33 which is locally also identified as South Derrick Avenue). According to Caltrans (Caltrans 2018), this segment of SR-33 carries approximately 1,950 average daily trips (ADT) with 777 of these ADTs involving heavy trucks. At the peak of construction, there would be 750 daily workers; even if each worker drove their own vehicle, this would add no more than 1,500 ADT (one arrival trip and one departure trip apiece for each employee) to this segment of SR-33, slightly less than a doubling of traffic. A temporary doubling of the traffic trips on SR-33 as a result of construction worker traffic would only result in a 3 dBA increase, which would not be substantial. Truck trips are not anticipated to exceed 50 per day (25 truck deliveries, one arrival and one departure trip), which is a small percentage of existing truck traffic on SR-33, and would not result in a noticeable increase in truck-related traffic noise levels. Construction-related traffic noise impact is considered less than significant.

6.1.3 Construction Vibration

During land grading, trenching, and construction activities for the Project, groundborne vibration would be produced by the construction equipment. The construction equipment most likely to create vibration is summarized in Table 12. The peak particle velocity (PPV) for specific equipment at the reference distance of 25 feet and at the closest residences (165 feet) are identified in the Table.

Table 12. Vibration Velocities for Typical Construction Equipment

Equipment	PPV at 25 Feet (Inches per Second)	PPV at 165 Feet (Inches per Second)
Vibratory Pile Driver	0.17	0.01
Large bulldozer	0.089	0.005
Loaded trucks	0.076	0.004
Jackhammer	0.035	0.002
Small bulldozer	0.003	0.0002

Source: FTA 2006. **Notes:** PPV = peak particle velocity

As shown in Table 12, the proposed equipment with the highest vibration source level (e.g., a vibratory pile driver) generates vibration levels of 0.17 PPV in/sec at a distance of 25 feet, while small bulldozers would generate only 0.003 PPV in/sec at 25 feet. Based on the distance to the closest sensitive receptors (approximately 165 feet) and the equation for vibration attenuation included in Section 2.4, Groundborne Vibration Fundamentals, Dudek calculated the expected PPV at the nearest receptors from the various equipment; the results of these calculations are presented in Table 12 (PPV at 165 feet). According to the results of the calculations that are illustrated in Table 12, vibration levels at the closest residences would range from 0.0002 to 0.01 PPV in/sec during project construction.

Vibration levels at these receptors would not exceed the FTA building damage threshold of 0.2 PPV in/sec. As such, construction-related vibration associated with the Project would result in a less-than-significant impact.

6.2 Operational Noise and Vibration

This section includes details and analyses related to the operational noise impacts of the Project, as evaluated at noise-sensitive receivers in the Project vicinity.

6.2.1 Traffic Noise

As indicated in the Project Description (Section 1.2), the proposed solar energy facility would be staffed by approximately 7 employees. Access to the Project site for employees is available directly from State Route 33 (SR-33 which is locally also identified as South Derrick Avenue). According to Caltrans (Caltrans 2018), this segment of SR-33 carries approximately 1,950 average daily trips (ADT). Seven employees would result in the generation of 14 ADT (one arrival trip and one departure trip) to this segment of SR-33, less than a 1% increase in the traffic volume. Operational traffic noise is therefore considered less than significant, as there would not be a discernible increase in roadway traffic noise as a result of project operation.

6.2.2 Operational Equipment Noise

The Project would include the following main elements:

- Modular photovoltaic solar panels on fixed or single-axis trackers
- Direct current to alternating current power inverters up to 12 feet high
- A 34.5-kV collection system either overhead or underground
- Facility substation, including direct-current collection equipment, utility-scale inverters, and a low to medium voltage transformer
- Perimeter fencing
- Lighting and other on-site facilities as required

The Project also includes an ESS that would provide electrical storage and an O&M building for on-site employees. The ESS and O&M building would be located adjacent to the on-site substation at the eastern Project boundary. The ESS equipment would be enclosed in a structure, container boxes, or trailers. The ESS is expected to include HVAC units, as would the O&M building. Figure 2, Site Plan, shows the site layout with the important noise-generating equipment.

On-site noise sources associated with the Project would include the following:

- Solar panel single-axis trackers, if trackers are used
- Direct-current to alternating-current inverters
- Transformers
- ESS (including associated inverters, transformers, and HVAC equipment) and O&M building (HVAC)

Each of these noise sources is discussed in the following text. Although the Project is a solar facility that would be active and operational primarily during daytime hours, the inverters and step-up transformer may operate during the early morning hours. In addition, HVAC equipment for the ESS containers could operate at times in the overnight period. Therefore, to provide the most conservation assessment of potential noise impacts and to account for a "worst-case" scenario, the County's nighttime (10:00 p.m. to 7:00 a.m. [Fresno County 2017]) noise level standard for stationary source noise is used. According to Table 5, the Exterior Noise Level Standards specify 45 dBA at residential land uses for 30 minutes in 1 hour during nighttime hours (10:00 p.m. to 7:00 a.m.) and 50 dBA for daytime hours.

Trackers

Noise from the tracker motors that would make brief, incremental adjustments to the angle of the photovoltaic panels throughout the day is not included in the analysis because their noise levels are very low (approximately 37 dBA at a distance of 10 feet, AECOM 2012), and they operate for only a few seconds at a time. Therefore, the noise level from the tracker motors is negligible.

Inverters and Medium Voltage Transformers

The exact model of inverter and medium voltage transformers have not yet been specified; therefore, representative equipment was assumed. Dudek performed noise measurements of an inverter/transformer pair at an operational solar facility (Dudek 2017) which should be similar in capacity to that which would be used for the Sonrisa project. Dudek measured a sound pressure level of 56.3 dBA at a distance of 50 feet from the inverter/transformer pair. An array of 94 inverter/transformer pairs is expected to be spread across the site as shown on Figure 2. Inverters and transformers are proposed to be installed outdoors, with no enclosures.

High Voltage Transformer

The National Electrical Manufacturers Association published standards for transformers. According to *NEMA Standards Publication No. TR 20- 2014 – Dry Type Transformers for General Applications* (NEMA 2014), noise level limits are specified for equivalent winding kilovolt-amps ranges and cooling systems. Based on the anticipated transformer capacity, the expected sound generation level for the main step up generator (or Generator Step Up, GSU) is 59.7 dBA at 50 feet. It is assumed that there will be one GSU for the facility substation.

Energy Storage System and O&M Building

The energy storage system (ESS) is anticipated to be comprised of batteries and bi-directional inverter units housed in containers or structures. Noise from the ESS would be created by the associated heating ventilation and air conditioning (HVAC) units employed to maintain acceptable operating temperatures within the containers. A total of 48 individual HVAC units were assumed to be required for the ESS component. The O&M building would also include HVAC, with 2 individual HVAC units assumed.

Information from the vendor for a similar energy storage project indicates the HVAC unit that is supplied as standard equipment for these types of projects is a Daikin-McQuay air-cooled condenser units (Model 025D); Dudek assumed this same model would be employed for the O&M building. The Daikin-McQuay Model 025D produces a sound pressure level of 80.8 dBA at a distance of 50 feet during full operation. Dudek reviewed the octave band data for the Model 025D for the frequency range from 31 hertz to 8 kilohertz. This octave band data did not reveal any significant tones that would necessitate consideration of special noise limits under the Fresno County noise ordinance.

Dudek used the provided site plan and noise specifications for the anticipated noise-generating equipment to create an Excel-based model of the operational noise levels from the proposed solar project at the identified proximate noise sensitive receivers. The model uses the published sound level for each piece of equipment; standard outdoor distance attenuation rates for point sources and hard-site conditions (most conservative) applied to the distance between each equipment location and the receiver locations; and, the logarithmic sum of individual equipment noise levels at each receiver point.

Sound attenuation due to distance, for a point source (which is applicable to piece of equipment) is calculated with the equation:

$$SPL_1 = SPL_2 - 20\log(D_2/D_1)$$

Where:
SPL_1 is the calculated sound pressure level (in dB) at specified distance [D_2]
SPL_2 is a known (measured) sound pressure level at a known distance [D_1]
D_1 is distance from source to measured sound pressure level
D_2 is distance from source to location of calculated sound pressure level

Sound levels are expressed in decibels, which are a logarithmic function. The formula to add one sound level (LA) to another sound level (LB) expressed in dB is:

$$LA + LB = 10\log10\ (10LA/10 + 10LB/10)\ dB$$

Applying the above equations, and based upon supplied sound energy levels for each of the noise generating components of the project, the noise level from the operation of all project equipment was calculated at each of the three closest residential receivers. Table 13 provides expected total Project operational noise levels at the three residential properties closest to the Project site.

Table 13. Unmitigated Operational Noise Summary (dBA L_{eq})

Receiver Location, Description	Sound Pressure Levels at Receivers (dBA)
M1 - 3 residences, north side of Adams Avenue, between Derrick & Monterey	36
M2 - 1 Residence, along east side of Monterey and along south side of Adams	38
M3 - 1 residence along south side of Adams, between Monterey and Merced	37

Notes: dBA = A-weighted decibel

The results in Table 13 show that the predicted operational noise would be less than the most restrictive County noise level standard of 45 dBA L_{eq} at the nearest noise-sensitive receptors (the nighttime limit between 10:00 p.m.

to 7:00 a.m., Fresno County 2017). Refer to Figure 4 for the location of the modeled receivers in Table 13. Calculated operational noise would also less than the ambient sound levels for agriculture land uses in the vicinity, as described in other studies. Because operational noise levels would be within the limits prescribed by the County Noise Element and County Noise Ordinance, and because operational noise levels would not represent a substantial increase compared to ambient noise levels, operational noise is considered to be a less-than-significant impact.

The Excel-based model was also used to produce a noise contour map illustrating sound levels from the Project in all of the areas surrounding the Project site. Figure 4 presents the operational noise level contour map.

With respect to the proposed expansion of the Tranquillity Switching Station by PG&E, the added bay would include transformer equipment, similar to the step-up transformer described for the Project. With a noise level of 59.7 dBA at 50 feet, the added equipment at the switching station would attenuate to approximately 14 dBA at the closest residence (4,100 feet to the east). The addition of this noise contribution would not increase the Project noise levels at the identified receivers or alter the noise contours illustrated in Figure 4.

6.3 Operational Vibration

The Project does not propose the use of large rotating equipment. In fact, other than fans that could be incorporated for climate control of ESS enclosures, the Project would not include equipment with moving parts. Therefore, the Project has no potential to generate ground vibration levels greater than the 0.2 inches/second significance criterion for vibration. Thus, operational vibration impacts from the Project would be less than significant.

1 Introduction

The purpose of this Traffic Study (TS) is to provide an operational analysis (level of service) from short-term construction of the proposed Sonrisa Solar Park Project (herein known as the "Project"). Pursuant to Senate Bill (SB) 743, the focus of transportation analysis has shifted from vehicle delay (and level of service) to vehicle miles traveled (VMT) under California Environmental Quality Act (CEQA). This traffic analysis has been prepared for the purposes of General Plan consistency requirements of the Fresno County.

The objectives of this study are to:

- Estimate trip generation and trip characteristics for construction-related activities of the solar generation site;
- Document existing and peak construction traffic conditions including roadway segment and intersection levels of service (LOS) in proximity to the Project;
- Analyze the potential for traffic effects to occur as a result of construction of the Project; and
- Describe measures to improve traffic flow during the construction of the Project.

Activities associated with the operation and maintenance of the solar generation site would only be as-needed and are not likely to generate significant daily or peak hour traffic. Hence, this TS focuses only on construction-related traffic effects of the Project. The scope of the TS was submitted to the Fresno County Public Works Department for review and the analysis methodology generally follows the Guidelines for the Preparation of Traffic Impact Studies within the County of Fresno, Draft May 2018.

1.1 Project Description

The Project site is in the San Joaquin Valley of California, approximately 9.5 miles west of Interstate 5 (I-5), 8.5 miles south of the City of Mendota, and immediately east of State Route 33 (SR-33). The project site location and study area are shown in Figure 1. The project site plan is shown in Figure 2.

The Project site consists of three areas which are separated by existing roads. The westernmost unit is bordered to the north and south by West Adams Avenue and West Manning Avenue and to the east and west by South Monterey Avenue and SR-33 (South Derrick Avenue), respectively. The center unit is bordered to the north and south by West Adams Avenue and West South Avenue, and to the east and west by South Merced Avenue and South Monterey Avenue, respectively. The northeastern unit is bordered to the north and south by West Lincoln Avenue and West Adams Avenue, and to the east and west by South Merced Avenue and an unnamed dirt road, respectively.

The Project includes up to a 200 megawatt (MW) solar power generating installation. The 2,300-acre site would house all structures, including solar panels, single-axis tracking support structures, inverters, Supervisory Control and Data Acquisition (SCADA), and interconnection facilities (on-site substation), all of which would be enclosed by a perimeter security fence. A generation-tie (gen-tie) line would extend southwest from the Project site to the existing PG&E Tranquility 230-kV electrical switchyard located northeast of the intersection of West Dinuba and South Ohio streets.

The Project site is currently fallow but has been formerly used for agricultural production and remains disked annually. The site is adjacent to the existing Little Bear Solar Project.

1.1.1 Construction of Solar Generation Facilities

The proposed schedule for construction is approximately 14 months and for decommissioning is approximately 6 months. Project construction would include several simultaneous phases: site preparation and grading, trenching, gen-tie installation, energy storage and system installation, testing and commissioning, paving and site clean-up. The length of each phase over the 14-month construction period was evaluated to identify which phases could occur concurrently to determine peak worker and truck traffic, since traffic during these overlapping phases would be additive. Overlap of Phases 3, 4, 5, and 6 during construction activities of the project is estimated to generate peak worker and truck traffic (i.e., 350 workers and 72 vendor trucks). Similarly, peak phase of decommissioning activities is also estimated to require 350 workers and 72 trucks during its peak construction phase (Phases 1, 2, 3 and 4). It should be noted that import or export of soil was not required for the project site, therefore no haul trucks would be required during construction or decommissioning phases of the proposed project.

1.1.2 Operation and Maintenance

The facility will be fully operational and generating solar electricity from sunrise until sunset every day of the year. The facility will also be charging, discharging and storing electricity via the connected battery storage project, which may operate both within and outside of solar generating hours. The facility will be privately owned and operated throughout its life, and will not be open to the public. Only authorized personnel will be permitted on site, and these will generally be the employees operating and maintaining the facility except for other contractors, company personnel or visitors who have been briefed on the relevant safety procedures for being on site. The facility is expected to have 7 full time employees responsible for maintenance and other activities related to ongoing operations. These employees will generally be on site during normal business hours, unless otherwise required.

1.2 Study Area and Scope

As illustrated in Figure 2, the project includes the temporary construction staging areas, site access locations, development areas, and the proposed gen-tie interconnection location. The proposed project would be primarily accessed by SR 33 (South Derrick Road), West Manning Avenue, and West Adams Avenue. The study area is comprised of two intersections and three roadway segments that would be potentially affected by construction-related traffic generated by the proposed project. The study area intersections include:

1. SR 33/ Adams Avenue (Fresno County, Caltrans)
2. SR 33/ West Manning Avenue (Fresno County, Caltrans)

The study area roadway segments include:

1. Adams Avenue, east of SR 33 (Fresno County)
2. West Manning Avenue, east of SR 33 (Fresno County)
3. SR 33, between Adams Avenue and West Manning Avenue (Caltrans)

The peak periods analyzed in this study represent the highest cumulative total traffic for the adjacent street and roadway networks. Raw traffic counts are provided in Appendix A. The study area intersections and roadway segments were analyzed for the following study scenarios:

Existing Conditions

This TS includes a description of existing conditions in the site vicinity, including existing street system, existing weekday AM and PM peak hour traffic volumes, existing roadway traffic volumes, and traffic operations. The existing conditions are representative of year 2021.

Existing plus Project

Existing plus Project conditions includes analysis of weekday AM and PM peak hour traffic volumes, roadway daily traffic volumes and traffic operations with project traffic added to the existing conditions. Project traffic comprises of construction-related traffic generated from the solar generation system, on-site substation, energy storage system, and gen-tie line. This traffic was distributed and assigned to the segments and intersections in the study area and analyzed under Existing plus Project conditions.

Near Term Conditions

The near-term conditions include a short-term horizon year during the peak construction period of the Project. It is estimated by increasing the existing traffic counts by an ambient growth rate (i.e., 1 percent per year) and also includes traffic generated from the approved/pending projects (i.e., cumulative projects in the area). This traffic was distributed and assigned to the segments and intersections in the study area and analyzed under Peak Construction plus Cumulative Projects conditions.

Near Term plus Project Conditions

This condition includes analysis of traffic operations under peak construction and cumulative projects conditions with project-related traffic added to the AM and PM peak hour and roadway segments traffic volumes. This traffic was distributed and assigned to the segments and intersections in the study area and analyzed under Peak Construction plus Cumulative Projects plus Project conditions. The traffic effects specific to the project under this condition were used as the basis for determining the improvement measures.

1.3 Fresno County General Plan

The Transportation and Circulation Element of the Fresno County General Plan provides the framework for Fresno County decisions concerning the countywide transportation system, which include various transportation modes and related facilities. It also provides for coordination with the cities and unincorporated communities within the county, with the Regional Transportation Plan adopted by the Fresno Council County Governments, Highway 99 beautification, and with State and Federal agencies that fund and manage transportation facilities within the county. The Transportation and Circulation Element reflects the urban and rural nature of Fresno County. The element establishes standards that guide the development of the transportation system, and management of access to the highway system by new development, throughout the unincorporated areas of the county. While the recently updated CEQA Guidelines required under SB 743 adopted VMT as the most appropriate measure of transportation impacts under CEQA., a local agency may require a traffic study to include a LOS analysis to identify infrastructure improvements required to provide acceptable operations, consistent with the acceptable LOS in the local agency's General Plan. This TS has been prepared meet the General Plan consistency requirements. The TS methodology is described in further detail below.

1.4 Methodology

Level of service (LOS) is commonly used as a qualitative description of segment or intersection operations and is based on the capacity and the volume of traffic using the segment or the intersection.

1.4.1 Intersections

Fresno County and Caltrans utilize the Highway Capacity Manual (HCM) intersection analysis methodology to analyze the operation of signalized and unsignalized study intersections. It should be noted that all study intersections are currently unsignalized. The HCM analysis methodology describes the operation of an intersection using a range of LOS from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding control delay experienced per vehicle for unsignalized intersections.

At unsignalized intersections, as well as all Caltrans study area intersections, the level of service was calculated using the HCM 6th Edition methodology. The Synchro 10 LOS software was used to determine intersection LOS for all study scenarios. Synchro is consistent with the HCM 6th Edition methodology (Transportation Research Board 2016). Table 1 shows the LOS for unsignalized intersections under the HCM methodology (delay).

Table 1. Levels of Service for Intersections using HCM Methodology

Level of Service	Unsignalized Intersections Control Delay (in seconds)
A	< 10.0
B	> 10.0 to < 15.0
C	> 15.0 to < 25.0
D	> 25.0 to < 35.0
E	> 35.0 to < 50.0
F	> 50.0

Source: *Highway Capacity Manual, 6th Edition*

1.4.2 Roadway Segments

The roadway segments analyzed in this TS are under the jurisdiction of Fresno County and Caltrans. The roadway segment was analyzed using the Florida Department of Transportation (FDOT) 2012 Quality/Level of Service Handbook (Florida Tables) to evaluate the roadway segment LOS, consistent with the methodology used by Caltrans in Fresno County to assess LOS for state and local (non-freeway) roadway segments and the methodology used in the Fresno County General Plan Environmental Impact Report. Table 2 presents roadway segment LOS thresholds by facility type in the study area as provided in the Florida Tables. All the roadway segments analyzed in this study are identified as a 2-lane, undivided facility.

Table 2. FDOT Daily Roadway Segment LOS Thresholds

Roadway Configuration	Two-way Average Traffic (ADT) Threshold				
	LOS A	*LOS B*	*LOS C*	*LOS D*	*LOS E*
2 Lane Undivided	-	4,700	8,400	14,300	28,600

Source: FDOT 2012 Generalized Average Annual Daily Volumes for Florida's Rural Undeveloped Areas and Developed Areas Less Than 5,000 Population - Table 3
Thresholds based on 2012 FDOT Quality/Level of Service Handbook, Florida Department of Transportation. Adjustments made according to appropriate area conditions, following FDOT guidelines.
All volumes are approximate and assume typical roadway characteristics. Actual threshold volumes for each LOS listed above may vary depending on a variety of factors including (but not limited to) roadway curvature and grade, intersection or interchange spacing, driveway spacing, percentage of trucks and other heavy vehicles, travel lane widths, signal timing characteristics, on-street parking, volume of cross traffic and pedestrians, etc.

1.4.3 Level of Service (LOS) for General Plan Consistency

Fresno County

The Fresno County General Plan Transportation and Circulation Element has established the following level of service consistency criteria under Policy TR-A.2:

- The County shall plan and design its roadway system in a manner that strives to meet LOS D on urban roadways within the spheres of influence of the cities of Fresno and Clovis and LOS C on all other roadways in the County.

As the project site is located within a rural area, the LOS "C" consistency threshold applies in this study.

Caltrans

The intersections analyzed in this TS are located along a State highway (SR-33), which is under the jurisdiction of Caltrans. However, it should be noted that to comply with SB 743 implementation, the Caltrans Transportation Impact Study Guide (May 2020), replaced the Guide for the Preparation of Traffic Impact Studies (Caltrans 2002). Per the 2020 Transportation Impact Study Guide, Caltrans' primary review focus is VMT, replacing LOS as the metric used in CEQA transportation analyses. Caltrans recommends use of OPR's recommended thresholds and guidance on methods of VMT assessment found in OPR's Technical Advisory (OPR 2018). A VMT analysis (Dudek, Transportation Technical Memorandum, October 2020) was conducted for the project consistent with the OPR's Technical Advisory, December 2018 and Fresno County SB 743 Implementation Regional Guidelines (July 2020) and submitted to the County.

2 Project Trip Generation

This section documents the trip generation, distribution and assignment of construction-related traffic associated with the proposed project.

2.1 Trip Generation

The construction phase of the project is anticipated to take approximately 14-months. The work would be completed in eight-hour shifts, Monday through Friday, and would require a peak of approximately 350 workers, and 72 vendor trucks per day. The work shift would begin during the AM peak period (generally occurs between 6:00 a.m.–8:00 a.m. for areas within the rural Fresno County) and end during the PM peak period (generally occurs between 3:30 p.m.–5:30 p.m. for areas within the rural Fresno County). Therefore, 100 percent of the workers would arrive at the project site during the AM peak hour, and 100 percent of the workers would depart the site during the PM peak hour. Per the applicant's knowledge and experience with similar projects, it is expected that approximately 15 percent carpooling would occur among the workers. Therefore, a carpool reduction factor was applied to the daily and AM and PM peak trips associated with the workers. Truck traffic to and from the site was evenly distributed assuming an 8-hour workday. It should be noted that these trips are considered temporary as they would not be generated once the construction phase is completed. The project trips are presented in Table 3.

To address the effect caused by large over-sized trucks onto the roadway network, a factor called the passenger car equivalent (PCE) was developed and represents the number of passenger cars displaced by each truck in the traffic stream under mixed flow conditions. PCE factor ranges from 2.0 to 3.0 based on the number of axles in the truck. A PCE factor of 3.0 has been utilized to convert truck trips into equivalent car trips for the project construction trip generation analysis.

Table 3. Project Trip Generation Summary

Vehicle Type	Daily Quantity	Daily Trips	AM Peak Hour			PM Peak Hour		
			In	*Out*	*Total*	*In*	*Out*	*Total*
Trip Generation[1]								
Workers	350 workers	700	350	0	350	0	350	350
Carpool Reduction (15%)	53 workers	-105	-53	0	-53	0	-53	-53
Vendor Trucks	72 trucks	144	9	9	18	9	9	18
	Total	**739**	**307**	**9**	**316**	**9**	**307**	**316**
Trip Generation w/PCE[1]								
Workers (1.0 PCE)[2]	350 workers	700	350	0	350	0	350	350
Carpool Reduction (15%)	53 workers	-105	-53	0	-53	0	-53	-53
Vendor Trucks (3.0 PCE)[3]	72 trucks	432	27	27	54	27	27	54
	Total (w/PCE)	**1,027**	**324**	**27**	**351**	**27**	**324**	**351**

Notes: PCE = Passenger Car Equivalent.

1 Trips have been rounded to the nearest whole number; rounding errors may be present.

2 PCE factor of 1.0 was utilized for worker passenger cars.

3 PCE factor of 3.0 was utilized for vendor trucks.

Based on the table, the peak construction phase would temporarily generate approximately 739 total daily trips, 315 AM peak hour trips (306 inbound and 9 outbound), 315 PM peak hour trips (9 inbound and 306 outbound). With the application of PCE factors to truck trips, the Project would generate 1,027 total PCE daily trips, and 351 PCE trips during the AM peak hour (324 inbound and 27 outbound) and 351 PCE trips during the PM peak hour (27 inbound and 324 outbound).

2.2 Trip Distribution and Assignment

Project trips were distributed to the study area intersections and segments using the regional location of the project, logical commute routes for workers, and available truck routes for project-related trucks. Construction traffic from the project site would be distributed according to the percentages shown in Figure 3. It is expected that most of the construction workforce would commute daily to the jobsite from larger population centers, via I-5, SR-33, West Manning Avenue and Adams Avenue. It is anticipated that approximately 35 percent of construction workers would access the site from the northeast (i.e., Mendotta and Firebaugh) via SR-33, 30 percent would access the site from the southwest (i.e., Coalinga) and other areas along I-5, and the remaining 35 percent would access the site from the east (i.e., Fresno and Clovis) via West Manning Avenue. Figure 4 illustrates the worker trips along the roadway segments and intersections adjacent to the proposed project.

Most of the truck traffic (approximately 80 percent) would originate from I-5, approximately 10 percent is expected to travel from the north along SR-33, and the remaining 10 percent of truck traffic is likely to travel from the east along West Manning Avenue. Figure 5 illustrates the truck trips (non-PCE) along the roadway segments and intersections adjacent to the proposed project. Figure 6 presents the non-PCE trip assignment for the total project traffic (passenger cars and trucks).

3 Existing Conditions

This section describes existing conditions within the identified study area. Characteristics are provided for the existing street system, peak hour traffic volumes, and traffic operations.

3.1 Existing Street System

The existing traffic controls and geometrics at the study area intersections are shown in Figure 7. All the intersections identified in the study area are unsignalized. Characteristics of the existing street system in the study are described below.

I-5 is a four-lane north-south freeway and known as the West Side Freeway from SR-99 to south of Tracy. I-5 runs parallel to SR-33 with two-lanes in each direction and has an interchange at SR-33 (South Derrick Avenue). Per traffic volumes published by Caltrans Division of Traffic Operations, the average daily traffic (ADT) volumes along I-5 near the SR-33 (South Derrick Avenue) interchange were observed to be 41,000 vehicles in 2018.

SR-33 (South Derrick Avenue) is a north-south, two-lane undivided roadway designated as a Rural Expressway by the Fresno County General Plan Circulation Element (Fresno County 2012). SR-33 would serve as the primary access roadway for construction traffic approaching the site from I-5 to the south and population centers (including Mendota and Firebaugh) to the northeast. It also forms the project site's western boundary and would serve as one of the primary access roadways for construction traffic approaching the site. Per traffic volumes published by Caltrans Division of Traffic Operations, the ADT volumes along SR-33 near its interchange with I-5 were observed to be 1,950 vehicles in 2018 and no change in volumes has been observed in the period between 2016 and 2018.

West Manning Avenue is an east-west, two-lane undivided road designated as a Rural Expressway by the Fresno County General Plan Circulation Element (Fresno County 2012). It also forms the project site's southern boundary and would serve as one of the primary access roadways for construction traffic approaching the site.

Adams Avenue is an east-west two-lane undivided Local Road which provides direct access to agricultural parcels along its length from Ormsby Avenue to the west and extends easterly in the Fresno County. It also forms the project site's northern boundary and would serve as one of the primary access roadways for construction traffic approaching the site.

3.2 Transit, Pedestrian, and Bicycle Facilities

The Fresno County Rural Transit Agency (FCRTA) provides passenger bus service between, and within, the rural communities of Fresno County. There are 13 fixed transit routes offered by the FCRTA, and reservation-based, demand responsive service offering curb-to-curb transportation is available in most communities. Westside Transit provides scheduled round trip inter-city service between Firebaugh, Mendota, and Kerman to the Fresno-Clovis Metropolitan Area, Monday through Friday from 7:00 am to 5:30 pm. (Fresno County Rural Transit Agency 2021). The nearest bus stop to the site is located approximately 2.5 miles northeast of the project site on Oller Street in Mendota.

The project is in a generally undeveloped area and there are no dedicated pedestrian or bicycle facilities in the vicinity of the project site or along the surrounding street network. The nearest planned bicycle facility is a proposed Class II (striped on-street bicycle lane) Planned Rural Bikeway along Jefferson Avenue, approximately 2.75 miles to northeast of the project site (Fresno County 2013).

FIGURE 7

Existing Traffic Controls and Geometrics

Sonrisa Solar Park Traffic Study

INTENTIONALLY LEFT BLANK

3.3 Existing Traffic Volumes

A review of historic average daily counts available along SR-33 near its interchange with I-5, indicated that the daily volumes along SR-33 have not changed since the year 2016. Due to rural nature of the study area, the traffic volumes in the study area were also not expected to be impacted significantly due to shelter in-place restrictions of COVID-19. Recent historic traffic counts were unavailable for any roadway segments or intersections near the Project. Therefore, new peak hour counts at the study intersections and 24-hour average daily traffic counts at roadway segments were conducted in March 2021 during a typical non-holiday week.

Detailed vehicle axle classification was also collected and was used to calculate heavy vehicle percentages and Traffic Index calculations provided in Chapter 7 of this report. To account for truck traffic along SR-33 and adjacent roadways, existing volumes were adjusted to include a "heavy vehicle percentage" within Synchro. Use of the heavy vehicle percentage factor within Synchro more accurately estimates the operation of an intersection that is being evaluated with the HCM methodology. Raw traffic count worksheets are provided in Appendix A, and level of service worksheets are provided in Appendix B. Existing weekday AM and PM peak hour traffic volumes are summarized in Figure 8.

3.4 Existing Traffic Conditions

3.4.1 Intersection Conditions

An intersection LOS analysis was prepared for the existing conditions using HCM 6th Edition methodology via the Synchro LOS software as discussed in Chapter 1. Table 4 shows the results of the existing conditions LOS analysis.

Table 4. Existing Weekday Peak Hour Intersection LOS

No.	Intersection	Control[1]	LOS Method[2]	AM Peak		PM Peak	
				Delay (in sec)	*LOS*	*Delay (in sec)*	*LOS*

Notes: Delay – Delay reported as Control Delay and expressed in seconds
LOS – Level of Service
1 Two-Way Stop Control reported as worst movement.
2 Analyzed using Highway Capacity Manual, 6th Edition methodology.
BOLD value indicates unsatisfactory LOS

As shown in the table, both study area intersections are currently operating at LOS B or better under existing conditions during both peak hours.

3.4.2 Roadway Segment Conditions

A roadway segment LOS analysis was prepared for the existing conditions using the roadway segment LOS methodologies discussed in Chapter 1. Table 5 shows the results of the existing conditions LOS analysis for the study roadway segments. As shown in the table, the study area roadway segments are currently operating at LOS A under existing conditions.

Table 5. Existing Roadway Segment Level of Service

4 Existing Plus Project Conditions

This section documents impacts on study area intersections related to construction-related project traffic under Existing plus Project (construction phase) conditions.

4.1 Existing plus Project Traffic Volumes

Existing traffic volumes were collected in March 2021 and were previously shown in Figure 8. The project's total trip assignment shown in Figure 6 for construction-related project traffic (workers, vendor trucks,) was added to the existing traffic volumes to derive the Existing plus Project traffic volumes. Figure 8 illustrates the Existing plus Project traffic volumes that were used to evaluate Existing plus Project traffic conditions.

4.2 Existing plus Project Traffic Conditions

4.2.1 Intersection Conditions

An intersection operations analysis was conducted for the study area to evaluate the Existing plus Project weekday AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described in Chapter 1. Table 6 shows the results of the Existing plus Project LOS analysis and provides a comparison to the existing (without project) conditions for the weekday peak hours using HCM methodology for unsignalized intersections. Detailed LOS worksheets are included in Appendix B.

The study area intersections are forecast to continue to operate at LOS B or better with the addition of the construction-related project traffic from the proposed project.

4.2.2 Roadway Segment Conditions

A roadway segment LOS analysis was conducted for the study area to evaluate the Existing plus Project for 24-hour roadway capacity conditions. The study area roadway segments were analyzed using the FDOT methodology as described in Chapter 1. Table 7 shows the results of the Existing plus Project LOS analysis and provides a comparison to the existing (without project) conditions for average daily traffic volumes. Based on the appropriate significance criteria, the study area roadway segments are forecast to continue to operate at LOS A with the addition of the construction-related project traffic.

5 Near Term Conditions

This section presents the results of a near term condition analysis that was conducted for a short-term horizon year during the peak construction period of the Project. This section describes conditions within the study area in the short-term (estimated to be year 2022 or year 2023) when peak construction of the Project and cumulative projects in the area would occur.

5.1 Cumulative Projects Trip Generation

Approved and/or pending projects are cumulative projects that are proposed and in the review process, but not yet fully approved; or projects that have been approved, but not fully constructed or occupied. Based on a review of the cumulative projects list in the vicinity of the site, two cumulative projects were identified that would add short-term construction traffic to the study area: the Scarlet Solar Energy Project and the Luna Valley Solar Project. The cumulative project locations are shown in Figure 9.

Project trip generation for the cumulative projects were estimated using the project size and number of workers estimate provided in the environmental documents available for these projects. It should be noted that the estimate of number of trucks that would be required for construction of the two solar projects was unavailable, therefore, Dudek estimated the number of trucks for these cumulative projects to provide an overall cumulative projects trip generation. Since the exact timing of construction of these cumulative projects is not known, to assess a worst-case scenario, the peak construction trip generation was estimated for the cumulative projects and used in the near conditions operational analysis.

As shown in Table 8, the cumulative projects are forecast to generate approximately 2,054 daily trips, 880 AM peak hour trips, and 880 PM peak hour trips. Trip estimates are also adjusted for PCE and as shown in Table 8, the cumulative projects are forecast to generate approximately 2,836 daily trips, 978 AM peak hour trips, and 978 PM peak hour trips. However, the non-PCE trip generation was used in the operational analysis and calculating the Traffic Index for near term conditions.

	Subtotal	*630*	*263*	*7*	*270*	*7*	*263*	*270*
Scarlet Solar Energy Project[2]								
Construction Workers	678 workers	1,356	678	0	678	0	678	678
Carpool Reduction (15%)	102 workers	203	102	0	102	0	102	102
Trucks	136 trucks	271	17	17	34	17	17	34
	Sub-total	*1,424*	*593*	*17*	*610*	*17*	*593*	*610*
Total Cumulative Projects Trip Generation								
Total Passenger Car Equivalent (Non-PCE) Trips		**2,054**	**856**	**24**	**880**	**24**	**856**	**880**
Total Passenger Car Equivalent (PCE) Trips (assuming 3.0 PCE for Trucks)		**2,836**	**906**	**72**	**978**	**72**	**906**	**978**

Notes: PCE = passenger car equivalent.

1 Luna Valley Solar Project Report, February 2020 estimates that peak construction workers would be approximately 300 workers and would range between 100 and 150 on an average and access the project site from West Manning Avenue. The number of trucks was not provided and therefore was estimated using the worker trips to truck trips ratio for typical solar projects such as the proposed project. Truck trips were estimated to be approximately 20% of worker trips.

2 Scarlet Solar Energy Project Initial Study, September 2018 estimates that construction workers would range between 132 and 678 and access the project site from West Manning Avenue. The number of trucks was not provided and therefore was estimated using the worker trips to truck trips ratio for typical solar projects such as the proposed project. Truck trips were estimated to be approximately 20% of worker trips.

5.2 Cumulative Projects Trip Distribution and Assignment

Trip distributions and assignments for the cumulative projects were developed using the available environmental documents and assuming logical commute corridors, similar the proposed project. The trips generated by the cumulative projects were distributed through the study area network and assigned to the study intersections and roadway segments.

5.3 Peak Construction plus Cumulative Projects Traffic Volumes

A growth of 1 percent per year was applied to the existing peak-hour and average daily traffic volumes conducted in March 2021 to reflect 2023 conditions. Additionally, daily and peak hour traffic volumes estimated from cumulative projects were assigned to the study area intersections and roadway segments. Thus, peak construction plus cumulative projects traffic volumes shown on Figure 8 were estimated.

5.4 Peak Construction plus Cumulative Projects Traffic Conditions

5.4.1 Intersection Conditions

Table 9 shows the results of the Peak Construction plus Cumulative Projects traffic conditions LOS analysis using HCM methodology for unsignalized intersections. Detailed LOS worksheets are included in Appendix B. As shown in Table 9, the SR-33/Adams Avenue intersection operates at LOS B during the AM and PM peak hours. The SR-33/West Manning Avenue intersection is forecast to operate at LOS F and LOS C during the AM and PM peak hour, respectively and is therefore considered to be inconsistent with the General Plan criteria. However, it should be noted that this inconsistency is primarily due to short-term construction traffic from cumulative projects.

5.4.2 Roadway Segment Conditions

Table 10 shows the results of the LOS analysis for the study roadway segments under the peak construction plus cumulative projects conditions. As shown in the table, the study area roadway segments are forecast to operate at LOS A under the peak construction plus cumulative projects conditions.

5.5 Peak Construction plus Cumulative Projects plus Project Traffic Conditions

The project's total trip assignment shown in Figure 6 for construction-related project traffic (workers and vendor trucks) was added to the peak construction plus cumulative projects traffic volumes to derive the Peak Construction plus Cumulative Projects traffic volumes. Figure 8 illustrates the volumes that were used to evaluate Peak Construction plus Cumulative Projects traffic conditions.

5.5.1 Intersection Conditions

Table 9 shows the results of the Peak Construction plus Cumulative Projects traffic conditions LOS analysis using HCM methodology for unsignalized intersections. Detailed LOS worksheets are included in Appendix B. As shown in Table 9, the SR-33/Adams Avenue intersection would operate at LOS C or better during the AM and PM peak hours with the addition of the construction-related project traffic. The SR-33/West Manning Avenue intersection would continue operate at LOS F during the AM and operate at LOS E during the PM peak hour. However, it should be noted that this inconsistency is primarily due to short-term construction traffic from cumulative projects and the proposed project.

5.5.2 Roadway Segment Conditions

Table 10 shows the results of the cumulative conditions LOS analysis for the study roadway segments under the peak construction plus cumulative projects plus project conditions. As shown in the table, with the addition of construction-related project traffic, the study area roadway segments would continue to operate at LOS A under peak construction plus cumulative projects plus project conditions.

INTENTIONALLY LEFT BLANK

6 Project Access and Circulation

During project construction, site access is proposed from one access point on Adams Avenue and one access point on West Manning Avenue. At the time of this writing, the exact location of the driveways had not been identified. Due to the rural nature of the area and low traffic volumes observed along West Manning Avenue and Adams Avenue and as shown in Table 11, construction-related traffic is not expected to cause excessive delays for vehicles entering or exiting the project site. The surrounding terrain is flat and no issues with sight distance at the project driveways are anticipated. Oversize vehicles will be subject to comply with oversize load permits and prior to construction the applicant would be required to secure all necessary permits. This would include implementation of traffic control measures, such as a traffic control plan to ensure adequate site access.

Once operational, ingress/egress would be provided at a gated driveway on West Manning Avenue, as shown in Figure 2. The perimeter of the Project site would be enclosed by an approximately 6-foot-tall chain-link fence topped with 1 foot of three-strand barbed wire. Only authorized access will be permitted on-site. The final design for the internal access roads and driveways would be subject to County roadway standards and final approval from Fresno County.

7 Traffic Index Calculation

Pavements are engineered to carry the truck traffic loads expected during the pavement design life. Truck traffic is the primary factor affecting pavement design life and its serviceability. The calculation of Traffic Index (TI) is a measure of the deteriorating effects that truck traffic has on asphalt concrete pavement and provides the information necessary to design a structural section for a roadway. The TI calculation was conducted using the Caltrans Highway Design Manual procedures as described in Chapter 610, Pavement Engineering Considerations, Topic 613- Traffic Considerations (Caltrans 2020). The TI Calculation will be used by the County to determine the Pavement Condition Index (PCI) for roadway segments of SR-33, Adams Avenue and West Manning Avenue adjacent to the Project to assess the potential change in pavement conditions with the project-added truck trips.

The TI represents the sum of the 18-kip Equivalent Single-Axle Loads (ESALs) expected on a given lane over a given period. The TI analysis and calculations are summarized in Table 12 and detailed worksheets are provided in Appendix D. Table 12 provides the number of vehicles in the respective direction (calculated by multiplying the number of vehicles classified by axle in the eastbound/northbound and westbound/southbound directions with the ESAL constants) and the resulting total ESALs for the respective direction for all the conditions analyzed in the study. The total ESALs are used in Table 613.3C of the Caltrans Highway Design Manual to determine the TI of the segment for the respective direction, for 20-year design. For example. the Existing TI (Appendix C) is based on existing traffic volumes and vehicle classifications based on the existing segment ADT counts conducted in March 2021 (Appendix A). A seasonal factor or daily factor was not applied to the average daily traffic counts.

The analyses of with-Project conditions are based on the daily truck trips estimated from the project's air quality analysis (Appendix C). The maximum number of daily truck trips were used in the TI analyses. The proportion of trucks with two, three, four and five axles was also estimated for a daily construction scenario. The component delivery trucks typically would be five-axle and would comprise approximately 35 percent of the total Project truck trips. Pick-up trucks and water trucks would be two-axle and 3-axles, respectively and comprised of 43 percent and 22 percent of the total Project truck trips.

The near-term conditions included the daily truck trips estimated by applying a growth rate of 2 percent to the existing truck trips as well as truck trips from cumulative projects. The truck trips from cumulative projects were assumed to have a similar axle classification and percentage as the proposed project.

Table 12 summarizes the TI calculation of the proposed Sonrisa Solar project. The Traffic Index Calculation worksheets are provided in Appendix C.

Table 12. Traffic Index Calculation

Source: Dudek 2021, Appendix C
Notes: EB=Eastbound; NB=Northbound; WB=Westbound; SB=Southbound; ESAL = Equivalent Single Axle Loads
1 ESAL calculation uses ESAL Constant provided in Table 613.3A ESAL Constants of the Caltrans Highway Design Manual, July 2020. Detail of the TI analysis are included in Appendix C.
2 20-Year ESAL value is from Table 613.3C Conversion of ESAL to Traffic Index of the Caltrans Highway Design Manual, July 2020
BOLD value indicates TI increase of 0.5 or greater

According to Fresno County, a project is considered to have a significant TI impact if the project-added traffic (on roadways that require analysis based on the traffic volume criteria[1]), cause an increase in the baseline traffic index of 0.5 or more, except on roadways that have been resurfaced within the last five years and for which the design traffic index at the time of the resurfacing exceeded the calculated traffic index with the project. If the design traffic index is not available, then the exception shall not apply. As such, the roadways adjacent to the project site have a paved width of more than 18-feet and at the timing of this writing, the status of resurfacing and design TI of the roadways is not known. Therefore, the TI analysis is provided for informational purposes.

As shown in Table 12, the following roadway segments are predicted to have a TI increase of 0.5 or greater as compared to conditions without the Project:

- Adams Avenue, between SR-33 and project driveway;
- West Manning Avenue, between SR-33 and project driveway.

1 On roadways with a paved width of less than 18 feet (essentially one-lane roadways)
a) Cause a roadway that already carries 100 vehicles per day (vpd) or less to carry more than 100vpd; OR
b) Cause a roadway that already carries more than 100 vpd to carry any additional traffic.

8 Improvement Measures

Based on the analysis of the peak construction scenario, management of construction traffic at the SR-33/West Manning Avenue intersection would be needed when Project construction would overlap with construction of cumulative projects. Traffic control and demand management measures that could be used to minimize traffic delays on SR-33/ West Manning Avenue intersection and improve traffic flow in the study area include:

1. During the peak construction period, convert the two-way-stop-control at the SR-33/ West Manning Avenue intersection to an all-way stop control. This measure can be implemented for the AM and PM peak hours only, using temporary traffic control (described below). This would reduce delay and improve the LOS to C during the AM and the PM peak hours and maintain consistency with General Plan LOS standards and ensure safe movement of non-construction and construction-related traffic at the SR-33/ West Manning Avenue intersection. Table 13 provides LOS at the SR-33/ West Manning Avenue intersection which would operate with reduced delay with an all-way stop control. It should be noted that this intersection does not meet the peak hour traffic signal warrants for the peak construction plus cumulative plus project conditions.

Table 13. Intersection LOS with Improvement Measures

No.	Intersection	Control	LOS Method	AM Peak		PM Peak	
				Delay (in sec)	*LOS*	*Delay (in sec)*	*LOS*
2	SR 33/West Manning Avenue	AWSC[1]	HCM[2]	15.5	C	18.4	C

Source: Dudek 2021
Notes: Delay – Delay reported as Control Delay and expressed in seconds
LOS – Level of Service
[1] All-Way Stop Control
[2] Analyzed using Highway Capacity Manual, 6th Edition methodology.
BOLD value indicates unsatisfactory LOS

2. Additionally, use temporary traffic control devices (i.e., flagmen, signage, barriers, etc.) and traffic control plans in accordance with Caltrans' California Manual on Uniform Traffic Control Device (CAMUTCD) at the project driveway locations and any location/section (such as SR-33 between Adams Avenue and West Manning Avenue for gen-tie construction) where project construction could impede traffic movement or safe passing of non-construction traffic through and around construction areas.
3. Coordination with Caltrans and County of Fresno in order to secure the necessary encroachment and trip permits necessary for any specialized haul trucks.

Additional travel demand management measures which can be implemented include:

- Stagger construction work shifts to reduce AM and PM peak hour traffic to and from the Project;
- Encourage carpooling among construction employees (workers) or establish a vanpool or ridesharing program;
- Establish flexible working hours outside of peak hours; and
- Schedule truck deliveries during off peak hours.

INTENTIONALLY LEFT BLANK

9 Findings and Recommendations

Based on the results of the traffic analysis in this TIA, the following summarizes the traffic impacts of the proposed Sonrisa Solar project. General findings include:

- The peak construction phase would temporarily generate approximately 739 daily trips, 315 AM peak hour trips (306 inbound and 9 outbound) and 315 PM peak hour trips (9 inbound and 306 outbound). Utilizing passenger-car equivalence (PCE) factors for project-related trucks, the PCE-adjusted trip generation estimates would be 1,027 daily PCE trips, 351 AM peak hour PCE trips (324 inbound and 27 outbound), and 351 PM peak hour PCE trips (27 inbound and 324 outbound).
- The study area roadway segments currently operate at LOS A conditions and would continue to operate at LOS A under Existing plus Project conditions, Near Term Conditions and Near Term plus Project conditions.
- The study area intersections currently operate at LOS B or better under Existing conditions and Existing plus Project conditions, during both the peak hours.
- The SR-33/West Manning Avenue intersection is forecast to operate at LOS F and LOS C during the AM and PM peak hour, respectively under the Near-Term conditions. With addition of project-related traffic, the SR-33/West Manning Avenue intersection would continue operate at LOS F during the AM and operate at LOS E during the PM peak hour and is therefore considered to be inconsistent with the General Plan consistency criteria.
- Traffic control measures that would be required to minimize traffic delays at the SR-33/ West Manning Avenue intersection and improve traffic flow in the study area include:
  - Convert the two-way-stop-control at the SR-33/ West Manning Avenue intersection to an all-way stop control. This measure can be implemented for the AM and PM peak hours only, using temporary traffic control.
  - Use temporary traffic control devices (i.e., flagmen, signage, barriers, etc.) and traffic control plans in accordance with Caltrans' California Manual on Uniform Traffic Control Device (CAMUTCD) at the project driveway locations and any location/section (such as SR-33 between Adams Avenue and West Manning Avenue for gen-tie construction).
  - Implementation of traffic control measures would reduce delay and improve the LOS to C during the AM and the PM peak hours.
- Based on the Traffic Index calculation, the following roadway segments are predicted to have a TI increase of 0.5 or greater as compared to conditions without the Project:
  - Adams Avenue, between SR-33 and project driveway
  - West Manning Avenue, between SR-33 and project driveway

Notes: ESAL - Equivalent Axle Load; NB = Northbound; SB = Southbound; EB=Eastbound; WB=Westbound

1 ESAL calculation uses ESAL Constant provided in Table 613.3A ESAL Constants of the Caltrans Highway Design Manual, July 2020.

20-Year ESAL value is from Table 613.3C Conversion of ESAL to Traffic Index of the Caltrans Highway Design Manual, July 2020

CHAPTER 1
Introduction

1.1 Purpose

This Final Environmental Impact Report (EIR) (EIR No. 7869) is an informational document that examines and discloses the potential environmental impacts of the Sonrisa Solar Project (Project), as proposed by EDP Renewables California Solar Park VI, LLC. The Project consists of construction, operation, maintenance, and decommissioning of a photovoltaic (PV) solar electricity generating facility upon approximately 2,000 acres of land in Fresno County.

The County of Fresno (County) is the lead agency for reviewing the environmental impacts of the Project pursuant to the California Environmental Quality Act (CEQA) and has directed the preparation of this Final EIR. The purpose of this EIR is not to recommend either approval or denial of the Project, but rather to inform decision-makers and members of the public of the potential environmental consequences of the Project. Because environmental review only informs some of the factors taken into consideration when an agency decides whether to approve a proposal, the County also will consider factors outside the scope of CEQA when it decides whether to approve the requested use permit. The County will rely on this EIR, along with other information in the formal record, in deciding whether to approve, approve with modifications, or deny land use applications for the Project that require discretionary approval, including Unclassified Conditional Use Permit (CUP) Application No. 3677. The County will use this Final EIR, in conjunction with other information developed in the County's formal record, when considering whether to certify the Final EIR and whether to approve the Applicant's applications to the County for necessary land use approvals. Other agencies with trustee responsibilities or permitting authority over the Project also may rely on this document in deciding whether to approve permits or issue other approvals for the Project.

This Final EIR consists of the Draft Environmental Impact Report (DEIR) published July 3, 2024, together with the responses to comments provided in Chapter 2 and revisions to the DEIR that are identified in Chapter 3. Supporting materials are provided in appendices. For example, public notices and the DEIR distribution list are provided in **Appendix A**, recipients of the Final EIR is provided in **Appendix B**, the mitigation monitoring and reporting program for the Project is provided in **Appendix C**, and exhibits to Comment Letter F are provided in **Appendix D**. The DEIR and a digital copy of this Final EIR are contained on the USB provided with printed copies of this Final EIR and are available for viewing at the County Department of Public Works and Planning.

The DEIR detailed the Project; evaluated and described the potential environmental impacts associated with Project construction, operation and maintenance, and decommissioning;

identified those impacts that could be significant; and presented mitigation measures that, if adopted, would avoid or minimize these impacts. The DEIR also evaluated alternatives to the Project, including a Reduced Acreage Alternative and a No Project Alternative.

1.2 Project Overview

The Project consists of three main components: a solar PV facility with 200 MW_{AC} generating capacity; an energy storage system with 184 MW_{AC} battery storage capacity; and a gen-tie line extension to the point of interconnection with the Tranquillity Switching Station. Other necessary infrastructure would include a Project substation and a permanent operation and maintenance (O&M) building (both proposed to be shared with the Scarlet Solar project). The O&M building would be supported by a septic system and leach field. Supervisory Control and Data Acquisition System (SCADA), meteorological data instruments, telecommunications infrastructure, access roads parking, security fencing, lighting, and signage. The Project would generate renewable energy from ground-mounted single axis tracking arrays and intermittently store electricity by charging and discharging lithium-ion batteries. The Project would have a generating capacity of up to 200 megawatts alternating current (MW_{AC}) and a battery storage capacity of 184 MW_{AC} (with battery duration of approximately 4 hours). The Project would connect to the electrical grid via an approximately 0.2-mile extension to an existing or approved approximately 3.3-mile long 230 kilovolt (kV) transmission line (also called a generation-tie, or gen-tie, line) to reach the point of interconnection to the existing Tranquillity Switching Station, which is owned and operated by Pacific Gas and Electric Company (PG&E). The requested term for the CUP is 35 years.

Most of the parcels proposed for Project solar arrays are owned by Westlands Water District (WWD). The parcels are zoned AE-20, Exclusive Agriculture, with a 20-acre minimum parcel size. The site is generally bounded by State Route 33 (SR 33, also known as South Derrick Avenue) to the west, West Manning Avenue to the south, South Merced Avenue to the east, and West Adams Avenue to the north. West South Avenue bisects the site from east to west.

1.3 Organization of the Final EIR

Consistent with CEQA Guidelines section 15132, this Final EIR consists of the following elements:

a) The DEIR;

b) Comments received on the DEIR;

c) A list of persons, organizations, and public agencies that commented on the DEIR;

d) The County's responses to significant environmental points raised in the review and consultation process; and

e) Other information added by the County.

CHAPTER 2
Responses to Comments

2.1 Public Review of the Draft EIR

The County advised interested parties that a Draft EIR (DEIR) for the Project was available for review by filing a Notice of Completion of the DEIR with the State Clearinghouse on July 3, 2024, by publishing notice of the availability of the DEIR (NOA) in The Business Journal on July 3, 2024, by posting the DEIR on the County's website (http://www.co.fresno.ca.us/EIR), and by mailing notification of the document's availability to the Project's distribution list. The NOA briefly described the Project, identified locations where the DEIR and referenced documents would be available for review, and solicited comments on the DEIR during the comment period. The comment period began on July 3, 2024, and concluded on August 19, 2024. All interested parties were invited to submit written comments regarding the adequacy and accuracy of the analysis and determinations made in the DEIR. Responses to comments received are provided in this Chapter. Public notices about the DEIR and a copy of the list used in distributing it are included in Appendix A.

2.2 Availability of the Final EIR

A copy of the Final EIR is being provided to all who commented on the DEIR. Notice of the availability of the Final EIR and details about how to access it also are being provided to all others identified on the County's distribution list for this Project. Recipients of the Final EIR are identified in Appendix B.

An electronic copy of the Final EIR is available on the County's website: http://www.co.fresno.ca.us/EIR. Printed and electronic copies of the Final EIR, as well as electronic copies of reference materials cited, are available for review during normal working hours at the Fresno County Public Works and Planning Department, 2220 Tulare Street, Fresno. A printed copy of the Final EIR that includes an electronic copy of the Final EIR and copies of all reference materials relied upon in its drafting will be provided to the libraries listed below with a request that the materials remain available for public review for at least 60 days:

- Fresno County Main Library, Reference Department, 2420 Mariposa Street, Fresno;
- Fresno County Mendota Branch Library, 1246 Belmont Avenue, Mendota; and
- Fresno County Tranquillity Branch Library, 25561 Williams Street, Tranquillity.

The Final EIR and all documents referenced in the Final EIR also are available upon request by contacting Jeremy Shaw at (559) 600-4207 or by email at jshaw@FresnoCountyCA.gov.

2.3 Approach to Comment Responses

The County received 6 letters from 5 entities regarding the DEIR. Copies of the letters are provided in Section 2.4, *Responses to Comments on the Draft EIR*.

TABLE 2-1
COMMENTERS ON THE SONRISA SOLAR PROJECT DRAFT EIR

Letter	Name	Agency or Interested Party	Date
A	Matthieu McNair, Land Management	Pacific Gas and Electric Company (PG&E)	July 19, 2024

D	Russ Freeman, PE, Deputy General Manager of Resources	Westlands Water District	August 14, 2024
E	Julie A. Vance, Regional Manager (Region 3)	California Department of Fish and Wildlife	August 19, 2024
F	Grace Holbrook, Attorney Mitchell M. Tsai Law Firm	Carpenters Union Local 701	August 19, 2024

SOURCE: Compiled by ESA, August 2024.

Under CEQA, the lead agency "shall evaluate comments on environmental issues" received from people who have reviewed a draft EIR and prepare written responses that "describe the disposition of each significant environmental issue that is raised by commenters" (Public Resources Code section 21091(d); CEQA Guidelines section 15088(c)). The responses to comments in this chapter are intended to provide clarification and refinement of information presented in the Draft EIR.

2.4 Responses to Comments on the Draft EIR

Each of the 6 comment letters regarding the DEIR is presented below and is followed by the County's responses to those comments.

Re: Sonrisa Solar Project
APN: 028-101-72 , 028-101-74 , 028-111-01 , 028-111-07 , 028-111-14 , 028-111-15
028-111-16 , 028-111-21

Dear Jeremy Shaw

Thank you for giving us the opportunity to review the subject plans. The proposed Sonrisa Solar project is within the same vicinity of PG&E's existing facilities that impact this property. A-1

PG&E has existing easements for our 230Kv Tranquillity SW STA-Helm electric transmission line. Our easements have building restrictions that prevent any drilling, building or any other structures within our easement. There appears to be portions of this project that propose to encroach within our electric transmission easement which is the reason for this impact letter. If there will be no drilling, building, or any structures within the above-mentioned APNs, please confirm with a response. For any service connections or proposed uses of our electric transmission line, contact the service planning department. A-2

Please contact the Building and Renovation Center (BRSC) for facility map requests by calling 1-877-743-7782 and PG&E's Service Planning department at www.pge.com/cco for any modification or relocation requests, or for any additional services you may require. A-3

As a reminder, before any digging or excavation occurs, please contact Underground Service Alert (USA) by dialing 811 a minimum of 2 working days prior to commencing any work. This free and independent service will ensure that all existing underground utilities are identified and marked on-site. A-4

If you have any questions regarding our response, please contact me at M71A@pge.com

Sincerely,

Matthieu McNair
Land Management
925-804-5736

2.4.1 Letter A: Pacific Gas and Electric Company

A-1 The comment correctly notes that the Sonrisa Solar Project is proposed in the vicinity of existing PG&E facilities. See Table ES-1 in the DEIR (ES-4), which identifies parcels within the Project site. See also, DEIR Section 2.2 (p. 2-1 et seq.), which describes the location of Project site; DEIR Section 2.3, which describes existing land uses in the area, including "PG&E's… existing Tranquillity Switching Station, overhead transmission lines, and related infrastructure"; and Section 2.5.3 (p. 2-12), which describes what changes to PG&E's existing infrastructure are proposed to accommodate the Project.

A-2 The County understands that provisions of PG&E's existing easements could restrict Applicant activities within the easements. As described in DEIR Section 2.7.3 (p. 2-16), the Project would include construction of a 0.2-mile extension of an existing 3.3-mile gen tie line (proposed for shared use with the Scarlet Solar facility). As noted in DEIR Section 2.10 (p. 2-21), a "PG&E utility easement for shared use of a 230 kV transmission line" is expected to be needed for the Project.

A-3 Under CEQA, the lead agency "shall evaluate comments on environmental issues" received from commenters who have reviewed a draft EIR and prepare written responses that "describe the disposition of each significant environmental issue that is raised by commenters" (Public Resources Code §21091(d); CEQA Guidelines §15088(c)). Although CEQA does not require that responses be provided for comments that do not address the adequacy or accuracy of the environmental analysis or that do not identify an environmental issue (Id.; see also CEQA Guidelines §15204(a)), the County appreciates receipt of contact information for the PG&E Service Planning Department and has included it in the record where it will be available to the Applicant and others.

A-4 DEIR Section 4.19.1.3 (p. 4.19-4) describes underground utility notification requirements pursuant to Government Code §4216 et seq. This comment does not address the adequacy or accuracy of the environmental analysis and does not identify an environmental issue contemplated by CEQA but has included it in the record where it will be available to the Applicant and others. No change to the Final EIR has been made in response to this comment.

Hello Jeremy,

The District is currently reviewing the DEIR. Can you please send the electronic files for AERMOD and/or SHARP files? This would include both the input and output files. Without the files the District may be unable to confirm the results of the HRA.

B-1

To: Shaw, Jeremy <jshaw@fresnocountyca.gov>
Subject: Fresno County EIR No. 7869: Sonrisa Solar Project Draft EIR available for review

Good afternoon:

You are receiving the attached notice of the availability of the Draft Environmental Impact Report (EIR) for the Sonrisa Solar Project (SCH# 2020110008; Fresno County EIR No. 7869) because your email address is included on a project-specific distribution list for this project. The Sonrisa Solar Project Draft EIR is accessible on the County's website: https://www.fresnocountyca.gov/Departments/Public-Works-and-Planning/divisions-of-public-works-and-planning/development-services-division/planning-and-land-use/environmental-impact-reports/sonrisa-solar-project

No public meeting is scheduled to receive oral comments on the Draft EIR. Please submit input in writing on or before 5 p.m. August 19, 2024. Future public meetings about the EIR and the project will be separately noticed.

Best regards,
Jeremy Shaw

AIR POLLUTION CONTROL DISTRICT

HEALTHY AIR LIVING™

August 14, 2024

Jeremy Shaw
County of Fresno
Department of Public Works and Planning
2220 Tulare Street
Fresno, CA, 93721

Project: Unclassified Conditional Use Permit No. 3677 for the Sonrisa Solar Project

District CEQA Reference No: 20240776

Dear Mr. Shaw:

The San Joaquin Valley Air Pollution Control District (District) has reviewed the Draft Environmental Impact Report (DEIR) from the County of Fresno (County) for the Sonrisa Solar Project. Per the DEIR, the project consists of a 200-megawatt alternating current solar photovoltaic energy generation facility, 184-megawatt energy storage system, related facilities, and infrastructure on approximately 2,000 acres (Project). The Project is located by State Route 33 to the west, West Manning Avenue to the south, South Merced Avenue to the east, and West Adams Avenue to the north. West South Avenue bisects the site from east to west in unincorporated Fresno County. C-1

The District offers the following comments at this time regarding the Project:

1) Project Related Emissions

Based on the DEIR, Project specific annual criteria pollutant emissions from construction and operation are not expected to exceed any of the significance thresholds as identified in the District's Guidance for Assessing and Mitigating Air Quality Impacts (GAMAQI): https://ww2.valleyair.org/media/g4nl3p0g/gamaqi.pdf. C-2

1a) Construction Emissions

The District recommends, to further reduce impacts from construction-related diesel exhaust emissions, the Project should utilize the cleanest available off-road construction equipment. C-3

Printed on recycled paper.

2) District Rules and Regulations

The District issues permits for many types of air pollution sources, and regulates some activities that do not require permits. A project subject to District rules and regulations would reduce its impacts on air quality through compliance with the District's regulatory framework. In general, a regulation is a collection of individual rules, each of which deals with a specific topic. As an example, Regulation II (Permits) includes District Rule 2010 (Permits Required), Rule 2201 (New and Modified Stationary Source Review), Rule 2520 (Federally Mandated Operating Permits), and several other rules pertaining to District permitting requirements and processes.

The list of rules below is neither exhaustive nor exclusive. Current District rules can be found online at: https://ww2.valleyair.org/rules-and-planning/current-district-rules-and-regulations. To identify other District rules or regulations that apply to future projects, or to obtain information about District permit requirements, the project proponents are strongly encouraged to contact the District's Small Business Assistance (SBA) Office at (559) 230-5888.

C-4

2a) District Rules 2010 and 2201 - Air Quality Permitting for Stationary Sources

Stationary Source emissions include any building, structure, facility, or installation which emits or may emit any affected pollutant directly or as a fugitive emission. District Rule 2010 (Permits Required) requires operators of emission sources to obtain an Authority to Construct (ATC) and Permit to Operate (PTO) from the District. District Rule 2201 (New and Modified Stationary Source Review) requires that new and modified stationary sources of emissions mitigate their emissions using Best Available Control Technology (BACT).

C-5

This Project may be subject to District Rule 2010 (Permits Required) and Rule 2201 (New and Modified Stationary Source Review) and may require District permits. Prior to construction, the Project proponent should submit to the District an application for an ATC. For further information or assistance, the project proponent may contact the District's SBA Office at (559) 230-5888.

C-6

2b) District Rule 9510 - Indirect Source Review (ISR)

The Project is subject to District Rule 9510 because it will receive a project-level discretionary approval from a public agency and will equal or exceed 9,000 square feet of space.

C-7

The purpose of District Rule 9510 is to reduce the growth in both NOx and PM emissions associated with development and transportation projects from mobile and area sources; specifically, the emissions associated with the construction and subsequent operation of development projects. The ISR Rule requires developers to mitigate their NOx and PM emissions by incorporating clean air design elements into their projects. Should the proposed development project clean air design elements be insufficient to meet the required emission reductions, developers must pay a fee that ultimately funds incentive projects to achieve off-site emissions reductions. C-8

Per Section 5.0 of the ISR Rule, an Air Impact Assessment (AIA) application is required to be submitted no later than applying for project-level approval from a public agency. As of the date of this letter, the District has not received an AIA application for this Project. Please inform the project proponent to immediately submit an AIA application to the District to comply with District Rule 9510 so that proper mitigation and clean air design under ISR can be incorporated into the Project's design. One AIA application should be submitted for the entire Project. C-9

Information about how to comply with District Rule 9510 can be found online at: https://ww2.valleyair.org/permitting/indirect-source-review-rule-overview C-10

The AIA application form can be found online at: https://ww2.valleyair.org/permitting/indirect-source-review-rule-overview/forms-and-applications/ C-11

District staff is available to provide assistance, and can be reached by phone at (559) 230-5900 or by email at ISR@valleyair.org. C-12

2c) District Rule 4002 (National Emissions Standards for Hazardous Air Pollutants)

In the event an existing building will be renovated, partially demolished or removed, the Project may be subject to District Rule 4002. This rule requires a thorough inspection for asbestos to be conducted before any regulated facility is demolished or renovated. Information on how to comply with District Rule 4002 can be found online at: https://ww2.valleyair.org/compliance/demolition-renovation/ C-13

2d) District Rule 4601 (Architectural Coatings)

The Project may be subject to District Rule 4601 since it may utilize architectural coatings. Architectural coatings are paints, varnishes, sealers, or stains that are applied to structures, portable buildings, pavements or curbs. The purpose of this rule is to limit VOC emissions from architectural coatings. C-14

In addition, this rule specifies architectural coatings storage, cleanup and labeling requirements. Additional information on how to comply with District Rule 4601 requirements can be found online at: https://ww2.valleyair.org/media/tkgjeusd/rule-4601.pdf C-15

2e) District Regulation VIII (Fugitive PM10 Prohibitions)

The project proponent may be required to submit a Construction Notification Form or submit and receive approval of a Dust Control Plan prior to commencing any earthmoving activities as described in Regulation VIII, specifically Rule 8021 – *Construction, Demolition, Excavation, Extraction, and Other Earthmoving Activities.* C-16

Should the project result in at least 1-acre in size, the project proponent shall provide written notification to the District at least 48 hours prior to the project proponents intent to commence any earthmoving activities pursuant to District Rule 8021 (Construction, Demolition, Excavation, Extraction, and Other Earthmoving Activities). Also, should the project result in the disturbance of 5-acres or more, or will include moving, depositing, or relocating more than 2,500 cubic yards per day of bulk materials, the project proponent shall submit to the District a Dust Control Plan pursuant to District Rule 8021 (Construction, Demolition, Excavation, Extraction, and Other Earthmoving Activities). For additional information regarding the written notification or Dust Control Plan requirements, please contact District Compliance staff at (559) 230-5950. C-17

The application for both the Construction Notification and Dust Control Plan can be found online at: https://ww2.valleyair.org/media/fm3jrbsq/dcp-form.docx C-18

Information about District Regulation VIII can be found online at: https://ww2.valleyair.org/dustcontrol C-19

2f) Other District Rules and Regulations

The Project may also be subject to the following District rules: Rule 4102 (Nuisance) and Rule 4641 (Cutback, Slow Cure, and Emulsified Asphalt, Paving and Maintenance Operations). C-20

3) District Comment Letter

The District recommends that a copy of the District's comments be provided to the Project proponent. C-21

If you have any questions or require further information, please contact Eric McLaughlin by e-mail at eric.mclaughlin@valleyair.org or by phone at (559) 230-5808.

Sincerely,

Tom Jordan
Director of Policy and Government Affairs

Mark Montelongo
Program Manager

2.4.3 Letter C: San Joaquin Valley Air Pollution Control District

C-1 This summary of the Project is consistent with DEIR Chapter 2, *Project Description* (p. 20-1 et seq.).

C-2 The comment, consistent with the disclosure and analysis of potential impacts to air quality (DEIR, p. 4.4-1 et seq.), states that annual criteria pollutant emissions estimated for construction and operation of the Project do not exceed any of the adopted SJVAPCD CEQA significance thresholds. The County has included this comment in the record where it may be considered by decision-makers and others.

C-3 Under CEQA, the lead agency "shall evaluate comments on environmental issues" received from commenters who have reviewed a draft EIR and prepare written responses that "describe the disposition of each significant environmental issue that is raised by commenters" (Public Resources Code §21091(d); CEQA Guidelines §15088(c)). Although CEQA does not require that responses be provided for comments that do not address the adequacy or accuracy of the environmental analysis or that do not identify an environmental issue (Id.; see also CEQA Guidelines §15204(a)), the County acknowledges the stated recommendation for the Project to utilize the cleanest available off-road construction equipment and has made it available to the Project Applicant.

C-4 The County acknowledges this summary of SJVAPCD's regulatory framework of rules and regulations, which is consistent with information provided in the regulatory setting of the analysis of potential impacts on air quality included in DEIR Section 4.4.1.3 (p. 4-4.8 et seq.)..

C-5 The summary of SJVAPCD Rules 2010 and 2201 pertaining to air quality permitting for stationary sources is consistent with information provided in the DEIR. See, for example, DEIR Section 2.10, *Permits and Approvals* (p. 2-21), which identifies anticipated Project permits and approvals as including an "Authority to Construct/Permit to Operate." See also DEIR Section 4.4.1.3 (p. 4-4-11), which summarizes Rule 2201.

C-6 See Response C-5 regarding Rule 2010 and Rule 2201.

C-7 The applicability of Rule 9510 (also known as the Indirect Source Review Rule) to the Project is noted throughout DEIR Section 4.4, *Air Quality*, including on pages 4.4-13, 4.4-19, 4.4-22 through 4.4-24, 4.4-26, 4.4-31,4.4-32, and 4.4-35. Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no more detailed response is provided.

C-8 See Response C-7 regarding Rule 9510 and the DEIR.

C-9 The County is aware of Rule 9510's Air Impact Assessment application timing requirements and has included this comment in the record where it is available to the Applicant and others. Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no change has been made to the EIR in response to the comment.

C-10 The online link to access information about how to comply with SJVAPCD Rule 9510 has been included in the record, where it is available to the Applicant and other stakeholders in the CEQA process for this Project.

C-11 The online link to access the SJVAPCD's Air Impact Assessment application has been included in the record, where it is available to the Applicant and other stakeholders in the CEQA process for this Project.

C-12 The SJVAPCD staff contact information provided has been included in the record, where it is available to the Applicant and other interested parties.

C-13 The Project would not result in the renovation, partial demolition, or removal of any existing buildings. Therefore, it appears that SJVAPCD Rule 4002, *National Emissions Standards for Hazardous Air Pollutants*, would not be applicable to the Project. No change has been made to the EIR in response to this comment.

C-14 The DEIR's discussion of Impact 4.4-4 (*The Project could expose sensitive receptors to substantial pollutant concentrations*) acknowledges that the Project would need to comply with SJVAPCD Rule 4601 to control ROG content of coatings for both construction and operational applications (see DEIR p. 4.4-31). No change has been made to the EIR in response to this comment.

C-15 This information provided in this comment about Rule 4601 has been included in the record, where it is available to the Applicant and others. However, because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no change has been made to the EIR in response to the comment.

C-16 As described in the DEIR discussion for Impact 4.4-5 (*The Project could generate odor or dust emissions*), Regulation VIII would require the Applicant to prepare a Dust Control Plan, and all applicable control measures would need to be implemented (see DEIR, p. 4.4-33). The Dust Control Plan requirements, including submittal and approval requirements, are presented in DEIR Table 4.4-3, *SJVAPCD Rule 8021 Non-Administrative Measures and Notification Requirements Applicable to the Project* (DEIR, p. 4.4-12).

C-17 See Response C-16 regarding dust control requirements and the EIR's consideration of them. Also, the SJVAPCD compliance staff contact information provided in this comment has been included in the record, where it is available to the Applicant and others.

C-18 The link to the online application for the Dust Control Plan has been included in the record, where it is available to the Project Applicant. Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no change has been made to the EIR in response to the comment.

C-19 The link to the online information about SJVAPCD Regulation VIII has been included in the record, where it is available to the Project Applicant. Because this comment does not address the

adequacy or accuracy of the environmental analysis or identify an environmental issue, no change has been made to the EIR in response to the comment.

C-20 This comment is consistent with information provided in DEIR Section 4.4.1.3, *Regulatory Setting* (p. 4.4-10 et seq.), which explains that SJVAPCD Rules 4102 and 4641 would apply to the Project.

C-21 Consistent with CEQA, the County has considered this letter and has included it in the record. As a curtesy to the SJVAPCD, the letter also has been provided to the Project Applicant.[2]

[2] Shaw, 2024b. Email of Jeremy Shaw to Madison Novak, FW: CEQA 20240776: DEIR Sonrisa Solar. August 20, 2024.

Westlands Water District

August 14, 2024

Mr. Jeremy Shaw, Planner
Development Services & Capital Projects Division
Fresno County Public Works and Planning
2220 Tulare Street, Sixth Floor
Fresno, CA 93721

SUBJECT: Comments Regarding Environmental Impact Report (EIR) No. 7869 for the Sonrisa Solar Project

Dear Mr. Shaw,

Westlands Water District (District) reviewed EIR No. 7869, the proposal to construct, operate, maintain, and decommission an approximately 200-megawatt alternating current (MWac) solar photovoltaic (PV) energy generation facility, 184 MWac energy storage system, and related facilities and infrastructure on approximately 2,000 acres comprising 33 Fresno County Assessor Parcel Numbers (APN). The District offers the following comments. D-1

- The Applicant indicated the proposed water sources are on-site groundwater wells and through imported surface water supplies provided by the District. The Applicant is limited to extraction of two (2.0) acre feet of groundwater per year for operation of its solar power generation facilities for each 320-acre portion of land acquired by the Applicant. During construction of the solar project facilities located on the property, the Applicant may extract an additional one hundred and fifty (150) acre-feet of groundwater per year for construction water purposes for each 320-acre portion of land acquired by the Applicant. D-2

The Applicant may also be eligible to apply for and receive Municipal and Industrial (M&I) water services, and the land will continue to have access to the District's Distribution system. If the Applicant is **eligible**, the District's Article 19 Rules & Regulations provide that the District will make available up to five (5) acre-feet annually per 160 acres, for solar developments on land not participating in the "Continued Benefits to Modified Agricultural Land" provisions of the District's Article 2. The Applicant's operations will be bound by the Regulations, Terms and Conditions established by the District for M&I use. D-3

286 W. Cromwell Ave, Fresno, CA 93711
P.O. Box 5199, Fresno, CA 93755
Phone: 559-224-1523 | wwd.ca.gov

- A copy of the District's Rules & Regulations is available at https://wwd.ca.gov/about-westlands/additional-information/rules-and-regulations/. D-4
- Based on the Project Location Map provided, the project site is located near the District's Laterals 7 and 8. Prior to construction, please contact Underground Service Alert (811). D-5
- The District previously provided comments for the proposed project on June 12, 2020, a copy of which is attached. If the location of the proposed project or water source should change, please notify the District. D-6

Thank you for the opportunity to comment on this project. If you have any additional questions, please contact Brent Dragomanovich at 559-241-6245.

Sincerely,

Russ Freeman

Russ Freeman, P.E.
Deputy General Manager of Resources

June 12, 2020

Mr. Ejaz Ahmad
Fresno County Department of Public Works and Planning
Development Services Division
County of Fresno
2220 Tulare Street, Sixth Floor
Fresno, California 93721

Subject: COMMENTS REGARDING ENVIRONMENTAL IMPACT REPORT (EIR) NO. 7869 AND UNCLASSIFIED CONDITIONAL USE PERMIT (CUP) APPLICATION NO. 3677 FOR EDPR CA SOLAR PARK VI LLC

Dear Mr. Ahmad,

Westlands Water District (District) has reviewed the operational statement for the proposed solar panel project by EDPR CA Solar Park VI LLC (Project). After reviewing the Project application, we have the following comments about the project site: D-7

1. The Project lies within the District boundary. This land consists of dry farming and does not currently receive an allocation of water from the District's agricultural water service contract. Since the Applicant is proposing a solar development, the Applicant is eligible to receive water through the District's Municipal and Industrial (M&I) supply and the land will continue to have access to the District's distribution system. D-8

2. The District has adopted regulations governing the application for and use of M&I water (Regulations). The Regulations stipulate the quantity of water that will be made available to a water user from the District's Central Valley Project (CVP) contract supply. The District will make available up to five (5) acre-feet per 160 acres annually for solar development operations. The Applicant is responsible for acquiring more water if needed. A copy of the Regulations is also provided for your information. D-9

3. The District has underground facilities located on and/or near the subject parcels. Please do not disturb these facilities. Prior to construction of the proposed project, please contact Underground Service Alert. D-10

Thank you for the opportunity to assist the County of Fresno in this matter, if you have any additional questions please feel free to contact Juan Pacheco at 559-241-6228. D-11

Sincerely,

Russ Freeman

Russ Freeman, P.E.
Deputy General Manager of Resources

WESTLANDS WATER DISTRICT

OFFICE--3130 N. FRESNO STREET/MAILING--P. O. BOX 6056, FRESNO, CA 93703
TELEPHONE: WATER DEPT. (559) 241-6250/OTHER (559) 224-1523/FAX (559) 241-6276

TERMS AND CONDITIONS FOR MUNICIPAL AND INDUSTRIAL WATER SERVICE

1. The furnishing of water to and its use by the water user shall be subject to all regulations of the Board of Directors of the District as the same may exist now or hereafter be amended or adopted. In the event of a conflict between the terms and conditions set forth herein and the regulations, the latter shall be controlling.

2. All water delivered shall be pursuant to a request by the water user for the delivery of a stated amount to a specific location. The request shall be made within the time and in the manner prescribed by the General Manager.

3. Water will be furnished by the District subject to the terms and conditions under which the water is made available to the District and if, in the exclusive judgment of the District, the water and facilities for its delivery are available; provided, that the District will use its best efforts, to the extent that it has water and capacity available and taking into account the requirements of other water users to receive water from its facilities, to provide such water in the manner and at the times requested. The District may temporarily discontinue water service or reduce the amount of water to be furnished for the purpose of such investigation, inspection, maintenance, repair, or replacement as may be reasonably necessary of any of the District 's facilities. Insofar as feasible, the District will give the water user notice in advance of such temporary discontinuance or reduction, except in case of emergency, in which event no notice need be given. No liability shall accrue against the District or any of its officers, directors, or employees for damage, direct or indirect, because of the failure to provide water as a result of system malfunctions, interruptions in service necessary to properly operate and maintain the water distribution system, or other causes which are beyond the District's reasonable control.

4. By taking delivery of water from the District, the water user assumes responsibility for, and agrees to hold the District harmless from, all damage or claims for damage, which may arise from his furnishing or use of the water after it leaves the District facilities.

5. The water furnished by the District is not potable (suitable for drinking, cooking, bathing, or other domestic use) and the District does not warrant the quality or potability of water so furnished. By taking delivery of water from the District, the water user assumes responsibility for, and agrees to hold the District harmless from, damage or claims for damage arising out the non-potability of water furnished by the District. Untreated water must never be used for any type of human consumptive needs. A water user defined and operating as a Public Water Supply (PWS) shall be responsible for any water treatment, including but not limited to filtration and chlorination achieved through central treatment or point-of-entry (POE) treatment devices approved by the California Department of Health Services (DHS), in order to provide water safe for human consumption as required by Federal, State or local law or regulation.

According to DHS, the use of POE treatment systems by individual customers of a constructed conveyance system may not provide a continuous safe, potable supply of water due to inadequate operation and maintenance of these systems by the owners, unless they are a regulated PWS. Individual use of POE devices ("Water Treatment Exclusion") may only be used if they are approved by DHS and are regularly maintained by a State-licensed operator or service provider.

Facilities in place prior to July 2001, may continue to use bottled water for drinking and cooking ("Alternative Water Exclusion"). After July 2001, the District cannot furnish new municipal and industrial water service if bottled water use is the basis for the potable water supply unless approved by DHS. Bottled water may only be obtained from a State-licensed provider.

DHS mandates the District conduct periodic surveys of water use as required by the Safe Drinking Water Act and to collect records for Alternative Water and Treatment Exclusions. Records for exclusions include invoices or statements of bottled water delivery from a licensed provider or maintenance and service records for a POE system from a licensed operator. Water users who fail to complete a survey or provide records showing an approved exclusion requested by the District shall have water service discontinued if no response is received after a reasonable attempt has been made to obtain the information.

6. All water will be measured by the District with meters installed by it and such measurements shall be final and conclusive.

7. Charges for water, hereinafter referred to as "water charges", shall be established by the Board of Directors. The water charges shall include District operation and maintenance costs and any other costs determined by the Board to be payable as part of the water charges. Water charges shall be adjusted retroactively to the extent required and authorized by federal or state law or regulations or District regulations. The General Manager may adjust the water charges as necessary and legally authorized to account for increases or decreases in the estimates used to establish the water charges.

8. As a condition of the District continuing to furnish water, the water user shall make payment for the amount billed after the District's billing and by the 25th of the month in which the bill is mailed; provided, that the due date will be not less than 15 calendar days after the billing date. Charges not paid by the due date shall be delinquent; provided, that payments postmarked on or before the due date shall be deemed to have been received by that date. The payment of water charges or related penalties or interest shall be made at the District's Fresno office. When any deadline established herein falls on a Saturday, Sunday, or holiday, it shall be extended to the next working day.

9. All claims for overcharges or errors must be made in writing and filed with the District at its Fresno Office within 10 working days after the date the bill is received by the water user. In the event the water user files a timely written protest, the District's Finance & Administration Committee shall consider the protest at its next regular meeting and notify the water user in writing of its decision. The Committee's decision shall be final, unless a written appeal to the Board of Directors is filed with the Secretary of the District within 15 working days after notice of the decision. In the event of an appeal, the decision of the Board shall be final. The filing of a protest or an appeal does not nullify the payment requirement or the District's right to discontinue water service as provided in these terms and conditions. However, in the event the protest or appeal is sustained, the District will refund the amount of the overcharge and penalty, if any.

10. On the first day following the due date, a penalty of 10 percent of the water charges which became delinquent on the preceding day shall be added to the water charges and penalties and interest, if any, due and owing to the District, the total of which are hereinafter referred to as "unpaid charges." Prior unpaid charges shall accrue interest at a monthly rate of 1½ percent. The interest shall not, however, accrue after the unpaid charges have been added to, and become a part of, the annual assessment levied on the land by the District. All payments and credits shall be applied to the earliest unpaid charges.

11. At the time of filing the District's assessment book with the District Tax Collector, unpaid charges may be added to and become a part of the assessment levied by the District on the land which received the water or for which other water charges were incurred. The District shall notify the landowner of the expected amount prior to its addition to the annual assessment. The amount so added shall be a lien on the land and impart notice thereof to all persons. If the assessment becomes delinquent, penalties and interest will be added as provided by law.

12. To supplement the procedure described in paragraph 11, the District may elect to file and record a Certificate of Unpaid Water Charges as provided in California Water Code Section 36729. This Certificate creates a lien in the amount of unpaid charges on any land owned by the delinquent water user, or acquired by the water user before the lien's expiration, within the recording County.

13. Except as provided in paragraph 15, municipal and industrial water service shall not be provided to any parcel of land for which the unpaid charges for such service are a lien on the land or for which the assessment is delinquent.

14. Except as provided in paragraph 15, municipal and industrial water service shall not be provided to any person who owes the District unpaid charges notwithstanding the fact that the unpaid charges have been added to the assessment(s) on the parcel(s) for which they were incurred.

15. Where the District furnishes residential water service to persons other than the water user to whom the service is billed, the District shall make a reasonable, good faith effort to inform the actual users of the services when the account is delinquent. This shall be done by a notice that service will be terminated in 10 days. The notice shall inform the actual users that they have the right to become customers of the District without being required to pay the amount due on the delinquent account.

The District is not required to make service available to the actual users unless each actual user agrees to the terms and conditions of service. However, if one or more actual users are willing and able to assume responsibility for the entire account to the satisfaction of the District, or if there is a physical means legally available to the District of selectively terminating service to those actual users who have not met the requirements of the District's terms and conditions, the District shall make service available to the actual users who have met those requirements. In making service available to an actual user, the District may require that a deposit be paid to the District prior to establishing an account and furnishing service. If a deposit is required, it shall be based solely upon the creditworthiness of the actual user as determined by the District.

The District will give notice of the delinquency and impending termination of residential water service, at least 10 days prior to the proposed termination, by means of a notice mailed postage prepaid or by personal delivery to the water user to whom the service is billed not earlier than 19 days from the date of mailing the District's bill for services, and the 10-day period shall not commence until 5 days after the mailing of the notice. When the day established for the discontinuance of water service falls on a Saturday, Sunday, or District holiday, such water service shall be discontinued on the next working day.

The District will make a reasonable, good faith effort to contact an adult person residing at the premises of the water user by telephone or in person at least 48 hours prior to any termination of residential water service.

The District will comply with all other applicable provisions of California Government Code Sections 60370-60375.5 regarding termination of residential water service.

16. Except as provided in paragraph 15, in the event water service hereunder is discontinued as a result of nonpayment of water charges, all unpaid charges for such service which are due the District from the person in default must be paid before water service can be restored.

17. If a water user's delinquent charges are unpaid for 30 days or more, or if a water user's delinquent charges are added to the annual assessments on any lands within the District, or the procedure in paragraph 12 is implemented, the General Manager shall require, as a condition of resumption of water service, that advance payment of all water charges be made for the 12-month period immediately following resumption of service, according to a schedule to be determined by the General Manager. A written guarantee in a form satisfactory to the General Manager from a recognized financial lending institution may be substituted in lieu of advance payment.

18. The General Manager, after consultation with and approval by the Finance & Administration Committee, may also require advance payment and/or payment by cashier's check or such other actions as he may deem necessary when a water user's account is determined, based on the payment history or other actions of the water user, to create a financial risk or hardship for the District or its landowners. Circumstances which constitute the basis for such a determination include but are not limited to the

following: (1) instances of a water user's checks being returned unpaid or (2) instances where a water user whose account is delinquent has, in violation of District regulations, taken water from a District delivery.

19. By applying for or taking delivery of municipal and industrial water from the District, the water user agrees to these terms and conditions of service.

20. The District may modify or terminate these terms and conditions; provided, that such modifications or terminations are prospective only and notice thereof is given prior to the effective date by mail to the water user.

Adopted: 1/14/02
Revised: 1/15/13

ARTICLE 19. REGULATIONS REGARDING THE APPLICATION FOR AND USE OF MUNICIPAL AND INDUSTRIAL WATER WITHIN WESTLANDS WATER DISTRICT

19.1 PURPOSE

Westlands Water District has a long-term contractual entitlement to receive from the United States an annual supply of 1,150,000 acre-feet (AF) of Central Valley Project (CVP) water. The contracts between Westlands Water District and the United States allow the District to make CVP water available for municipal, industrial and domestic uses. The District may also acquire additional water supplies for these purposes. This Article establishes the rules and procedures for making application for and the use of municipal and industrial (M&I) water.

19.2 GLOSSARY OF TERMS AND DEFINITIONS

Unless specified below, the terms and definitions contained in Article 2 of these Regulations shall apply.

A. "Ag Related M&I Use" – the use of water exclusively for purposes of commerce, trade or industry associated with the production of agricultural crops or livestock, or their related by-products, including human uses, other than housing, that are incidental to the Ag Related M&I Use.

B. "Historic Use" – the greatest annual quantity of CVP water delivered for M&I Use to an M&I Water User at a point of delivery during the five-year period immediately preceding June 30, 2001.

C. "M&I Use" – the use of water for drinking, cooking, bathing, showering, dish washing, and maintaining oral hygiene or purposes of commerce, trade or industry.

D. "M&I Water Application" - an agreement in a form approved by the General Manager or his designee between the District and an M&I Water User, which describes the point of delivery for such water and the estimated quantity of water that will be made available by the District for M&I Use.

E. "M&I Water User" - individual or entity who has executed and submitted to the District an M&I Water Application or to whom the District makes water available for M&I Use.

19.3 M&I WATER AVAILABILITY

A. The General Manager shall set aside from the District's CVP water supply or other sources he deems appropriate water for M&I Use.

B. The General Manager or his designee shall assist any M&I Water User in identifying a source of water that can be made available to the District for M&I Use; provided, that this provision shall not impose on the District or its employees an obligation to incur any expense or other obligation on behalf of such M&I Water User.

19.4 APPLICATION FOR WATER

A. Except for M&I Use initiated before July 1, 2001, to receive water for M&I Use, a proposed M&I Water User must file at the District's Fresno office an M&I Water Application. Upon approval by the District, the M&I Water Application shall constitute a valid agreement for M&I Use until the M&I Water User notifies the District in writing that such M&I Use will be terminated. Every M&I Water Application shall identify the point of delivery and the intended use of the M&I Water.

B. An M&I Water Application for use in excess of 5 acre-feet, or 5 acre-feet per 160 acres when such application is for a solar development covering such acreage, per year shall identify a source of water that will, at the applicant's expense, be made available to the District for the proposed M&I Use.

C. Notwithstanding Section 19.4 B. of this Article, a M&I Water User may annually transfer into the M&I Water User's account a quantity of water, from any source available to the M&I Water User, sufficient to satisfy any Ag Related M&I Use for the water year; provided, the M&I Water User shall acknowledge in writing that the District has no obligation to make available to the M&I Water User, in any

year, a quantity of water in excess of the quantity transferred into the M&I Water User's account.

D. A supplemental M&I Water Application shall be filed by any M&I Water User before the quantity of water for M&I Use made available to such M&I Water User is increased (i) above Historic Use, for M&I Water Users receiving M&I water before July 1, 2001, or (ii) above the quantity stated in the initial M&I Water Application, for M&I Use initiated after June 30, 2001.

19.5 USE OF WATER

A. The unauthorized use or taking of water for M&I Use, or the waste or unreasonable use of water, are prohibited. Water made available for M&I Use may only be used at the point of delivery and for the purpose(s) identified in the M&I Water Application. Except as provided in Section 19.5 B. of this Article, the transfer of M&I water is prohibited.

B. M&I water identified pursuant to Section 19.4 B. of this Article or water transferred by the M&I Water User pursuant to Section 19.4 C. of this Article may be transferred within the District's boundaries. Nothing contained in this Article shall prevent an M&I Water User from changing the place of use of its M&I water within the District's boundaries.

C. All M&I Water Users shall implement conservation measures adopted by the Water Policy Committee of the Board of Directors or its successor.

D. All M&I Water Users shall cooperate in the District's efforts to comply with the terms of the Compliance Agreement between the California Department of Health Services and Westlands Water District, dated June 1, 2001.

E. Every point of delivery for M&I Water shall be equipped with a backflow prevention device of a design approved by the General Manager.

F. The General Manager is authorized, after written notice to the M&I Water User, to discontinue water service to any M&I Water User who violates this Article or the Terms and Conditions for Municipal and Industrial Water Service.

G. In the event the District's water supply is insufficient to meet all demands for water, including demands for irrigation, the General Manager is authorized to

reduce the quantity of water made available for M&I Use or to impose such temporary conservation actions or other measures, as he deems necessary to protect the public health and safety.

19.6 COMPLIANCE WITH TERMS AND CONDITIONS

Each M&I Water User shall comply with the Terms and Conditions for Municipal and Industrial Water Service, as amended by the Board from time to time. Failure to comply with the Terms and Conditions for Municipal and Industrial Water Service may be grounds for termination of M&I Water Use service, and no water shall be furnished to an M&I Water User who fails to make required payments pursuant to the Terms and Conditions for Municipal and Industrial Water Service, as amended by the Board, from time to time.

19.7 MISCELLANEOUS

A. The General Manager may do all things necessary to implement and effectuate these Regulations.

B. An appeal from any decision made pursuant to these Regulations shall be made to the Finance and Administration Committee of the Board of Directors. Such appeal shall be in writing and shall be filed with the District Secretary within 15 working days after notice of the decision. The decision of the Finance and Administration Committee may be appealed to the Board of Directors. Such appeal shall be in writing and shall be filed with the District Secretary within 15 working days after notice of the decision. The decision of the Board shall be final.

C. The General Manager shall provide notice of any changes or revision to these Regulations to all District landowners and M&I Water Users.

2.4.4 Letter D: Westlands Water District

D-1 This summary of Project information provided in the comment is consistent with DEIR Chapter 2, *Project Description*. Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no more detailed response is provided.

D-2 The noted groundwater extraction limits are consistent with information presented in DEIR Chapter 2, Project Description.

D-3 The Applicant's potential eligibility to receive municipal and industrial (M&I) water services and continued access to the Westlands Water District's (WWD) distribution system is acknowledged. Receipt of the District's Regulations, Terms and Conditions governing M&I use also is acknowledged. The potential eligibility for the Project to receive water through WWD municipal and industrial water service is discussed in Section 4.19 of the DEIR. See, e.g., the analysis of Impact 4.19-2 (p. 4.19-10 et seq.). The comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue but has been included in the record where it may be reviewed by the Applicant and others.

D-4 Receipt of the District's Regulations (as provided in the comment link) is acknowledged. Copies of WWD's Regulations for Allocation and Use of Agricultural Water,[3] Terms and Conditions for Agricultural Water Service,[4] Regulations for Application and Use of Municipal and Industrial Water,[5] and Terms and Conditions for Municipal and Industrial Water Service[6] have been included in the record for this Project.

D-5 DEIR Section 4.19.1.3 (p. 4.19-4) identifies Underground Service Alert North (USA North) as the service alert notification center for the region pursuant to Government Code section 4216 et seq. and explains that "USA North receives planned excavation reports and transmits the information to all participating members that may have underground facilities at the location of excavation." Location of the Project site near WWD (Laterals 7 and 8) is acknowledged. The underground service alert notification requested in this comment would occur pursuant to the Applicant's commitment to comply with all applicable laws and standards (DEIR Section 2.9.4, p. 2-20).

D-6 The County considered WWD's June 12, 2020, comments in advance of initiating the CEQA process for the Project via the issuance of Notice of Preparation (NOP) of the EIR on

[3] WWD, 2023a. Regulations for Allocation and Use of Agricultural Water within the Westlands Water District. Adopted July 20, 1987, revised September 19, 2023. https://wwd.ca.gov/wp-content/uploads/2023/09/article2-clean-revised-9-19-2023.pdf. Accessed August 22, 2024.

[4] WWD, 2022. Terms and Conditions for Agricultural Water Service. Revised April 19, 2022. https://wwd.ca.gov/wp-content/uploads/2024/04/wwd116a.pdf. Accessed August 22, 2024.

[5] WWD, 2023b. Regulations for Application and Use of Municipal and Industrial Water. Adopted January 14, 2002, revised September 19, 2023. https://wwd.ca.gov/wp-content/uploads/2024/06/rules19.pdf. Accessed August 22, 2024.

[6] WWD, 2002. Terms and Conditions for Municipal and Industrial Water Service. Revised January 14, 2002. https://wwd.ca.gov/wp-content/uploads/2014/04/wwd131a-TC-MI-Revised-Jan-14-2002.pdf. Accessed August 22, 2024.

November 2, 2020. (The NOP is included with the scoping report that is Appendix A to the DEIR). Responses to WWD's June 12, 2020, letter are provided in Responses D-7 through D-12.

D-7 The County acknowledges WWD's review of the operational statement submitted with the Applicant's application materials. While details described in the project description included in DEIR Chapter 2 (p. 2-1 et seq.) and analyzed on a resource-by-resource basis throughout the DEIR are generally consistent with details provided the operational statement, note that in the event of a discrepancy, the County is relying on the EIR.

D-8 See Response D-3 regarding the DEIR's acknowledgement of the Project's potential eligibility to receive water through WWD's municipal and industrial (M&I) supply. See also, for example, DEIR Section 2.3 (p. 2-3 et seq.), which describes existing on-site and surrounding land uses as being affiliated with WWD-ownership.

D-9 See Response D-4, acknowledging the District regulations, and DEIR Section 4.19 (p. 4.19-1 et seq.) regarding potential sources of water supply for the Project, including water from WWD.

D-10 See Response D-5 regarding underground service alert-related requirements and the project site's proximity to WWD infrastructure.

D-11 WWD's requested point of contact has been added to the County's Project-specific distribution list for the Project.

D-12 As indicated in See Response D-4, copies of WWD's Terms and Conditions for Municipal and Industrial Water Service and Article Regarding the Application for and Use of Municipal and Industrial Water Within Westlands Water District have been included in the record.

Subject: **Sonrisa Solar Project (Project)**
Draft Environmental Impact Report (DEIR)
State Clearinghouse No. 2020110008

Dear Jeremy Shaw:

The California Department of Fish and Wildlife (CDFW) received a DEIR from Fresno County as Lead Agency, for the Project pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

E-1

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, CDFW appreciates the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (*Id.*, § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on

E-2

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

projects and related activities that have the potential to adversely affect fish and wildlife resources. E-2 cont.

CDFW is also submitting comments as a **Responsible Agency** under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), related authorization as provided by the Fish and Game Code will be required. E-3

Nesting Birds: CDFW has jurisdiction over actions with potential to result in the disturbance or destruction of active nest sites or the unauthorized take of birds. Fish and Game Code sections that protect birds, their eggs, and nests include 3503 (regarding unlawful take, possession or needless destruction of the nest or eggs of any bird), 3503.5 (regarding the take, possession or destruction of any birds-of-prey or their nests or eggs), and 3513 (regarding unlawful take of any migratory nongame bird). E-4

Unlisted Species: Species of plants and animals need not be officially listed as Endangered, Rare, or Threatened (E, R, or T) on any State or Federal list to be considered E, R, or T under CEQA. If a species can be shown to meet the criteria for E, R, or T, as specified in the CEQA Guidelines section 15380, CDFW recommends it be fully considered in the environmental analysis for the Project. E-5

As a responsible agency, CDFW is responsible for providing, as available, biological expertise during public agency environmental review efforts (e.g., CEQA), focusing specifically on project activities that have the potential to adversely affect fish and wildlife resources. CDFW provides recommendations to identify potential impacts and possible measures to avoid or reduce those impacts. E-6

PROJECT DESCRIPTION SUMMARY

Proponent: EDP Renewables CA Solar Park VI, LLC

Objectives: The Project proposes to construct, operate, and decommission a photovoltaic (PV) solar electricity generating facility on approximately 2,000 acres of land that would produce up to 200 megawatts (MW) of alternating current (AC) energy. The proposed Project would also include an energy storage system with 184 MWac battery storage capacity and a gen-tie line to the point of interconnection with the existing Pacific Gas and Electric (PG&E) Tranquillity Switching Station. Other necessary infrastructure would include a Project substation, permanent operation and maintenance building supported by a septic system and leach field, Supervisory Control and Data E-7

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

Acquisition System, meteorological data system, groundwater well, telecommunications infrastructure, access roads, parking, security fencing, lighting, and signage.

Location: The Project site is located almost entirely within the lands owned by Westlands Water District (WWD). The Project site is generally bounded by State Route 33 (SR 33, also known as South Derrick Avenue) to the west, West Manning Avenue to the south, South Merced Avenue to the east, and West Adams Avenue to the north. West South Avenue bisects the site from east to west. The nearest communities to the Project site include the unincorporated community of Tranquillity, approximately 7 miles to the east; the City of Mendota, approximately 8 miles to the north; and the City of San Joaquin, approximately 9 miles to the east.

E-7 cont.

Timeframe: Undetermined, but construction of the Project would occur in multiple phases and require approximately 12-14 months to complete.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist Fresno County in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct, indirect, and cumulative impacts on fish and wildlife (biological) resources. Editorial comments or other suggestions may also be included to improve the CEQA document.

E-8

The Project site consists primarily of non-irrigated and regularly disked agricultural fields or fallowed lands surrounded by similarly disturbed lands utilized for agriculture or solar energy facilities. CDFW would like to note that the Project is sited within an area of relatively poor-quality habitat for fish and wildlife (biological) resources, significantly reducing the potential for individual Project and cumulative impacts to special-status species. As such, CDFW has taken into consideration the siting efforts and overall lower quality of habitat for biological resources during the preparation of this comment letter.

E-9

Currently, the DEIR acknowledges that the Project area is within the geographic range of several special-status animal species and proposes specific mitigation measures to reduce impacts to less than significant. CDFW has concerns about the ability of some of the proposed mitigation measures to reduce impacts to less than significant and avoid unauthorized take for a number of special-status animal species. These species include, but are not limited to, the federally endangered and State threatened San Joaquin kit fox (*Vulpes macrotis mutica),* the State threatened Swainson's hawk (*Buteo swainsoni),* and the State species of special concern burrowing owl (*Athene cunicularia)*.

E-10

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

San Joaquin Kit Fox (SJKF)

Mitigation Measure 4.5-1 mitigates for potential impacts to SJKF and includes measures for pre-construction surveys and avoidance. Additionally, Mitigation Measure 4.5-1 states that, "If avoidance of the potential dens or burrows is not feasible, the following measures shall be implemented to avoid potential adverse effects to the San Joaquin kit fox and/or burrowing owl:

- If the qualified biologist determines that potential dens or burrows are inactive, the biologist shall excavate these dens by hand with a shovel to prevent foxes or owls from using them during construction.

- If the qualified biologist determines that a potential non-natal kit fox den may be active, an on-site passive relocation program shall be implemented with prior approval from the USFWS. This program shall consist of excluding San Joaquin kit foxes from occupied burrows by installation of one-way doors at burrow entrances, monitoring of the burrow for 72 hours to confirm usage has been discontinued, and excavation and collapse of the burrow to prevent reoccupation. After the qualified biologist determines that the San Joaquin kit foxes have stopped using active dens within the Project boundary, the dens shall be hand excavated, as stated above for inactive dens. A similar exclusion methodology shall be used for burrowing owl exclusion, as described in the CDFW (2012) staff report on burrowing owl."

E-11

CDFW would like to note that implementation of this portion of Mitigation Measure 4.5-1, which allows for the eviction of occupied SJKF dens via installation of one-way doors, would directly result in the unauthorized take of SJKF and would be a direct violation of CESA. As such, in the event an active SJKF den is documented during pre-construction or construction activities, CDFW strongly recommends avoidance of these dens following the USFWS' "Standardized recommendations for protection of the San Joaquin kit fox prior to or during ground disturbance" document (USFWS 2011). If SJKF are detected within the Project Site and avoidance is not feasible, consultation with CDFW is warranted to discuss how to avoid take or, if avoidance is not feasible, to acquire an Incidental Take Permit (ITP) pursuant to Fish and Game Code section 2081, subdivision (b), prior to initiating or resuming (whichever applies) ground disturbing activities.

E-12

E-13

Swainson's hawk (SWHA)

Mitigation Measure 4.5-3 states that, "If an active Swainson's hawk nest is discovered during the nesting season (March 1 through September 15) within 0.5 mile of active construction, a qualified biologist should complete an assessment of the potential for current construction activities to impact the nest. The assessment would consider the

E-14

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

type of construction activities (e.g., noise levels and duration), the location of construction relative to the nest and pre-existing disturbance levels (e.g., construction activities in historically agricultural land versus activities in non-agricultural land), the visibility of construction activities from the nest location (e.g., topography or vegetation that could block line-of-sight to the nest), the number of construction personnel required to perform activities within the setback, and other existing disturbances in the area that are not related to construction activities of this project. Based on this assessment, the biologist will determine if construction activities can proceed and the level of nest monitoring required. When conducting the assessment, the biologist will consider the following levels of construction activity, with higher levels of activity requiring greater caution in determining setbacks:

- Light construction activity such as fence installation and limited vehicle access. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels in closer proximity to the occupied nests.

- Moderate and/or isolated construction activity such as grading and construction of substation, substation-access road, inverter skids, and manual installation of solar panels. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels beyond a moderate distance from the occupied nests.

- Heavy construction activity across a large area of the Project and/or using louder equipment such as pile drivers, concrete saws, or jackhammers. Noise levels for this type of activity will depend on location of the activities relative to the nest and allowing these activities within the 0.5-mile setback would require coordination with CDFW.

In the event the assessment determines that construction activities could occur closer than 0.5 miles to an active nest, in no event would construction activities occur within 500 feet of an active nest without approval from CDFW. Full-time monitoring to evaluate the effects of construction activities on nesting Swainson's hawks would be required where activity occurs closer than 0.5 miles. The qualified biologist shall have the authority to stop work if it is determined that project construction is disturbing nesting activities. These buffers may need to increase depending on the sensitivity of the nesting Swainson's hawk to disturbances and at the discretion of the qualified biologist. No avoidance would be needed if construction occurs near a known Swainson's hawk nest outside of the Swainson's hawk nesting season. In the event take cannot be avoided, the proponent shall confer with CDFW on the need for an incidental take permit and will comply with any specific-specific minimization and avoidance measures identified in the issued incidental take permit prior to the removal of active nest trees."

E-14
cont.

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

CDFW concurs with the implementation of a no-disturbance buffer for active nests, but recommends that in the event an active SWHA nest is detected, and a 0.5-mile no-disturbance buffer is not feasible, consultation with CDFW is warranted to discuss how to implement the Project and avoid take. If it is determined during this consultation that take cannot be avoided, take authorization through the acquisition of an ITP, pursuant to Fish and Game Code section 2081 subdivision (b) is necessary to comply with CESA. E-15

CDFW would also like to note that the DEIR did not include a measure to compensate for the loss of SWHA foraging habitat. As such, CDFW recommends the following: E-16

Recommended Mitigation Measure 1: SWHA Foraging Habitat Mitigation
CDFW recommends compensation for the loss of SWHA foraging habitat as described in CDFW's "Staff Report Regarding Mitigation for Impacts to Swainson's Hawks" (CDFG 1994) to reduce impacts to foraging habitat to less than significant. The Staff Report recommends that mitigation for habitat loss occur within a minimum distance of 10 miles from known nest sites. CDFW has the following recommendations based on the Staff Report: E-17

- For projects within 1 mile of an active nest tree, a minimum of 1 acre of habitat management (HM) land for each acre of development is advised.

  For projects within 5 miles of an active nest but greater than 1 mile, a minimum of ¾ acre of HM land for each acre of development is advised.

- For projects within 10 miles of an active nest tree but greater than 5 miles from an active nest tree, a minimum of ½ acre of HM land for each acre of development is advised.

Burrowing owl (BUOW)

Mitigation Measure 4.5-1 mitigates for potential impacts to BUOW and includes measures for preconstruction surveys and avoidance. Additionally, Mitigation Measure 4.5-1 states that, "If avoidance of the potential dens or burrows is not feasible, the following measures shall be implemented to avoid potential adverse effects to the San Joaquin kit fox and/or burrowing owl: E-18

- If the qualified biologist determines that potential dens or burrows are inactive, the biologist shall excavate these dens by hand with a shovel to prevent foxes or owls from using them during construction.

- If the qualified biologist determines that a potential non-natal kit fox den may be active, an on-site passive relocation program shall be implemented with prior

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

approval from the USFWS. This program shall consist of excluding San Joaquin kit foxes from occupied burrows by installation of one-way doors at burrow entrances, monitoring of the burrow for 72 hours to confirm usage has been discontinued, and excavation and collapse of the burrow to prevent reoccupation. After the qualified biologist determines that the San Joaquin kit foxes have stopped using active dens within the Project boundary, the dens shall be hand excavated, as stated above for inactive dens. A similar exclusion methodology shall be used for burrowing owl exclusion, as described in the CDFW (2012) staff report on burrowing owl."

E-18 cont.

CDFW concurs with this measure but recommends in the event an active BUOW den is documented on the Project site and avoidance following the no-disturbance buffer recommendations outlined in the "Staff Report on Burrowing Owl Mitigation" (CDFG 2012) guidance document is not feasible, consultation with CDFW is recommended for guidance on the development of mitigation measures such as take avoidance, minimization, and mitigation.

E-19

Editorial Comments and/or Suggestions

Nesting Birds

CDFW encourages that Project ground-disturbing activities occur during the bird non-nesting season; however, if ground-disturbing or vegetation-disturbing activities must occur during the nesting season (February 1st through September 15th), the Project applicant is responsible for ensuring that implementation of the Project does not result in violation of the Migratory Bird Treaty Act or relevant Fish and Game Code.

E-20

To evaluate Project-related impacts on nesting birds, CDFW recommends that a qualified biologist conduct a pre-construction survey for active nests no more than 10 days prior to the start of ground or vegetation disturbance to maximize the probability that nests that could potentially be impacted are detected. CDFW also recommends that surveys cover a sufficient area around the Project site to identify nests and determine their status. A sufficient area means any area potentially affected, either directly or indirectly, by the Project. In addition to direct impacts (i.e., nest destruction), noise, vibration, and movement of workers or equipment could also affect nests. CDFW recommends that a qualified biologist establish a behavioral baseline of all identified nests. Once Project activities begin, CDFW recommends having a qualified biologist continuously monitor nests to detect behavioral changes resulting from the Project. If behavioral changes occur, CDFW recommends halting the work causing the change.

E-21

If continuous monitoring of identified nests by a qualified biologist is not feasible, CDFW recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-

E-22

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

listed raptors. These buffers are advised to remain in place until the breeding season has ended or until a qualified biologist has determined the birds have fledged and are no longer reliant upon the nest or on-site parental care for survival. Variance from these no-disturbance buffers is possible when there is a compelling biological or ecological reason to do so, such as when the Project site would be concealed from a nest site by topography. CDFW recommends that a qualified biologist advise and support any variance from these buffers and notify CDFW in advance of implementing a variance. E-22 cont. E-23

Federally Listed Species: CDFW also recommends consulting with the USFWS on potential impacts to Federally listed species, including, but not limited to, San Joaquin kit fox (*Vulpes macrotis mutica).* Take under the Federal Endangered Species Act (FESA) is more broadly defined than CESA; take under FESA also includes significant habitat modification or degradation that could result in death or injury to a listed species by interfering with essential behavioral patterns such as breeding, foraging, or nesting. Consultation with the USFWS in order to comply with FESA is advised well in advance of any ground disturbing activities. E-24

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database, which may be used to make subsequent or supplemental environmental determinations (Pub. Resources Code, § 21003, subd. €). Accordingly, please report any special-status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNDDB field survey form can be found at the following link: https://nrm.dfg.ca.gov/fieldSurvey/default.aspx. The completed form can be mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov. The types of information reported to CNDDB can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Plants-and-Animals. E-25

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089). E-26

Docusign Envelope ID: B2086335-41DB-43E6-B7DF-170506B64FF7

CONCLUSION

CDFW appreciates the opportunity to comment on the DEIR to assist Fresno County in identifying and mitigating Project impacts on biological resources.

If you have any questions, please contact Ren Cotter, Environmental Scientist, at the address provided on this letterhead, by telephone at (559) 767-0956 or by electronic mail at Ren.Cotter@wildlife.ca.gov.

CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE
RECOMMENDED MITIGATION MONITORING AND REPORTING PROGRAM
(MMRP)

PROJECT: SONRISA SOLAR PARK

RECOMMENDED MITIGATION MEASURE	**STATUS/DATE/INITIALS**
Before Disturbing Soil or Vegetation	
Swainson's Hawk	
Recommended Mitigation Measure 1: SWHA Foraging Habitat Mitigation	

2.4.5 Letter E: California Department of Fish and Wildlife

E-1 The County acknowledges the regulatory authority of California Department of Fish and Wildlife (CDFW) under California's Fish and Game Code and summarizes it in the context of this Project in the regulatory setting for the analysis of potential impacts to biological resources (DEIR Section 4.5.1.3, p. 4.5-8 et seq.). The County further acknowledges CDFW review of the DEIR with respect to activities with the potential to affect fish and wildlife.

E-2 The County acknowledges CDFW's role as a Trustee Agency for fish and wildlife resources in California. See DEIR Section ES.3 (p. ES-6), which acknowledges that agencies with trustee responsibilities or permitting authority over the Project may rely on this document in deciding whether to approve permits or issue other approvals for the Project.

E-3 See Response E-2, which acknowledges that agencies like CDFW may rely on the EIR as a Responsible Agency under CEQA. CDFW's lake and streambed alteration agreement (LSAA) program is not applicable to the Project. Because there are no federal or state jurisdictional (wetlands or aquatic features) on the Project site, no discussion of the LSAA program was warranted or included in the DEIR. As discussed in DEIR Section 4.5.1.2 (p. 4.5-8), "The results of the field survey indicate that the ditch was excavated in uplands, and lacking wetland vegetation or hydrology or any surface connection to downstream waters, this ditch is not considered a jurisdictional feature that would be regulated by the USACE, RWQCB, or CDFW. The field survey disclosed that no other potentially jurisdictional features were observed during the aquatic resources delineation. Hence, no federal or state jurisdictional features occur on the Project site ([DEIR]Appendix F-1)."

To the extent that implementation of the Project requires authority for "take" of species protected under state law, see DEIR Section 4.5.1.3, *Regulatory Setting* (p. 4.5-9), which states, "Before a project results in take of a species listed under the CESA, a take permit must be issued under Section 2081(b)."

E-4 The DEIR acknowledges CDFW's jurisdiction with respect to California's Fish and Game Code sections that protect birds, their eggs, and nests (including sections 3503, 3503.5, and 3513) in Section 4.5.1.3, *Regulatory Setting* (p. 4.5-9).

E-5 The DEIR summarizes this authority pursuant to CEQA Guidelines section 15380 in DEIR Section 4.5.1.3, *Regulatory Setting* (p. 4.5-10).

E-6 CDFW's participation in the scoping portion of the County's environmental review process for this Project is acknowledged in DEIR Section 4.5 (p. 4.5-1) and in the Scoping Report provided in DEIR Appendix A.

E-7 The summary of the Project, location, and timeframe is consistent with information provided in DEIR Chapter 2, *Project Description* (p. 2-1 et seq.).

E-8 CDFW's comments and recommendations are considered in the order in which they are presented in this letter, and a copy of the letter has been included in the formal record of the Project where it may be further considered by decision-makers and interested stakeholders.

E-9 The comment that "the Project sited in an area of relatively poor-quality habitat for fish and wildlife (biological) resources, significantly reducing the potential for individual Project and cumulative impacts to special-status species" and that CDFW has considered these siting efforts is acknowledged. The County agrees with this site characterization, which is consistent with information disclosed in DEIR Section 4.5, *Biological Resources* (p. 4.5-1 et seq.), including in the environmental setting (DEIR Section 4.5.1.1, p. 4.5-1 et seq.).

E-10 DEIR Section 4.5.1.2 (p. 4.5-3 et seq.) describes special status species that could be affected by the Project, including the following special status wildlife species mentioned in this comment: San Joaquin kit fox (*Vulpes macrotis mutica),* Swainson's hawk (*Buteo swainsoni),* and burrowing owl (*Athene cunicularia)*. The DEIR analyzes direct and indirect effects of the Project in Section 4.5.3.2 (p. 4.5-12 et seq.). See, e.g., the analysis of Impact 4.5-1 (DEIR, p. 4.5-13 et seq.), which concludes that Project construction and decommissioning would have a less-than-significant impact with mitigation incorporated on San Joaquin kit fox and burrowing owl (Mitigation Measures 4.5-1 and 4.5-2 are recommended to minimize impacts to both species), and Swainson's hawk (Mitigation Measure 4.5-3 is recommended). CDFW's input about specific mitigation measures are addressed below in the order in which they are presented in this letter.

E-11 The quoted text provided in the comment is consistent with DEIR Mitigation Measure 4.5-1 (DEIR, pp. 4.5-17, 4.5-18). Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue (CEQA Guidelines §15204[a]), no more detailed response is provided here.

E-12 In response to this comment, the County has modified Mitigation Measure 4.5-1 as shown below and in Chapter 3, *Revisions to the Draft EIR*:

> **Mitigation Measure 4.5-1: Protection of Special-Status Species During Construction**
>
> Preconstruction surveys shall be conducted by a qualified biologist for the presence of San Joaquin kit fox and burrowing owl within 14 days prior to commencement of construction activities pursuant to the USFWS (2011) *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox* and CDFW (2012) ~~staff report for burrowing owl~~ Staff Report on Burrowing Owl Mitigation. The surveys shall be conducted in areas of suitable habitat for San Joaquin kit fox and burrowing owl. Areas that have been disked or cultivated within 12 months prior to the start of ground-disturbing activities are not considered suitable. Surveys need not be conducted for all areas of suitable habitat at one time; they may be phased so that surveys occur within 14 days prior to disturbance within active portions of the site. If no potential San Joaquin kit fox dens or burrowing owl burrows are identified, no further mitigation is required. If potential kit fox dens are observed and avoidance is determined to be feasible (as defined in CEQA Guidelines §15364 consistent with the USFWS [2011] *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox*) by a qualified biologist in consultation with the Project owner and the County, buffer distances shall be established prior to construction activities. If potential burrowing owl burrows are observed and avoidance is determined to be feasible (as defined

in the CDFW 2012 staff report on burrowing owl) by a qualified biologist in consultation with the Project owner and the County, an exclusion plan will be developed with minimum buffer distances prior to construction activities.

~~If avoidance of the potential dens or burrows is not feasible, the following measures shall be implemented to avoid potential adverse effects to the San Joaquin kit fox and/or burrowing owl:~~

- ~~If the qualified biologist determines that potential dens or burrows are inactive, the biologist shall excavate these dens by hand with a shovel to prevent foxes or owls from using them during construction.~~
- ~~If the qualified biologist determines that a potential non-natal kit fox den may be active, an on-site passive relocation program shall be implemented with prior approval from the USFWS. This program shall consist of excluding San Joaquin kit foxes from occupied burrows by installation of one-way doors at burrow entrances, monitoring of the burrow for 72 hours to confirm usage has been discontinued, and excavation and collapse of the burrow to prevent reoccupation. After the qualified biologist determines that the San Joaquin kit foxes have stopped using active dens within the Project boundary, the dens shall be hand-excavated, as stated above for inactive dens. A similar exclusion methodology shall be used for burrowing owl exclusion, as described in the CDFW (2012) staff report on burrowing owl.~~
- If kit fox are detected within the Project site and avoidance is not feasible, the Project owner shall initiate consultation with CDFW to discuss how to avoid take or, if avoidance is not feasible, to acquire an Incidental Take Permit (ITP) pursuant to federal Endangered Species Act Section 7 and California Fish and Game Code section 2081(b), prior to initiating or resuming ground-disturbing activities.
- In the event an active burrowing owl den is documented on the Project site and avoidance following the no-disturbance buffer recommendations outlined in the "Staff Report on Burrowing Owl Mitigation" (CDFG 2012) guidance document is not feasible, the Project owner shall consult with CDFW for guidance on take avoidance and minimization of harm to this species.

The proposed revisions to Mitigation Measure 4.5-1 do not trigger recirculation of the DEIR. CEQA directs that a draft EIR must be recirculated for a second round of public review if significant new information is added to an EIR after notice of public review has been given, but before final certification of the EIR occurs (Public Resources Code §21092.1; CEQA Guidelines §15088.5; *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 447. In this context, new information is "significant" if its addition deprives the public of a meaningful opportunity to comment on substantial adverse project impacts or feasible mitigation measures or alternatives that are not adopted (CEQA Guidelines §15088.5(a); *Laurel Heights Improvement Ass'n v. Regents of University of California* (1993) 6 Cal. 4th 1112). Recirculation of an EIR for a second round of public review is intended to be the exception, not the rule (Id. at 1132; *Environmental Council of Sacramento v. County of Sacramento* (2020) 45 Cal. App. 5th 1020, 1034. Based on this instruction from courts interpreting CEQA, the County's revision of Mitigation Measure 4.5-1 is not "significant," and so does not trigger recirculation.

E-13 See Response E-12 regarding the County's revision of Mitigation Measure 4.5-1. In response to this comment, the Project's list of anticipated permits and approvals (DEIR Section 2.10, p. 2-21) has been updated as shown below and in Chapter 3, *Revisions to the Draft EIR*:

> **California Department of Fish and Wildlife-**— An incidental take permit (ITP) pursuant to Fish and Game Code §2081(b) would be required if Project implementation could cause "take" of a California Endangered Species Act (CESA)-listed species. Take could occur, for example, if an active Swainson's hawk nest tree needed to be removed or if any occupied San Joaquin kit fox burrows cannot be avoided.

E-14 The text provided in the comment is consistent with DEIR Mitigation Measure 4.5-3 (DEIR, pp. 4.5-20, 4.5-21).

E-15 The County acknowledges CDFW's concurrence with the no-disturbance buffer for active Swainson's hawk nests. As drafted, Mitigation Measure 4.5-3 states (DEIR, p. 4.5-21), "In the event take cannot be avoided, the proponent shall confer with CDFW on the need for an incidental take permit and will comply with any specific-specific minimization and avoidance measures identified in the issued incidental take permit prior to the removal of active nest trees." Therefore, no change has been made in response to this comment.

E-16 CDFW correctly notes that the DEIR does not include a compensatory mitigation option to compensate for loss of Swainson's hawk foraging habitat. Regarding potential impacts on Swainson's hawk foraging habitat, states the DEIR states (p.4.5-23-24): "The total area of these existing and proposed cumulative projects is approximately 12,200 acres. The Project represents approximately 14 percent of the cumulative impact area. Based on an evaluation of the County land use data, a total of 218,773 acres of similar agricultural lands to that present on the Project site exist within 10 miles of the site, and the loss of the Project site would represent a loss of 0.77 percent of available foraging habitat (Appendix E-1)." Because the loss of Swainson's hawk foraging habitat was determined to be less than significant at the project level and less than cumulatively considerable, the DEIR appropriately does not recommend mitigation. Accordingly, no change to the DEIR has been made in response to this comment.

E-17 See Response E-16, which explains that the DEIR does not recommend mitigation for the less-than-significant impact on Swainson's hawk foraging habitat.

E-18 The text provided in the comment is consistent with DEIR Mitigation Measure 4.5-1(DEIR, p. 4.5-17), which mitigates for potential impacts to burrowing owl and includes measures for preconstruction surveys and avoidance.

E-19 The County acknowledges CDFW's concurrence with Mitigation Measure 4.5-1. In response to this comment, Measure 4.5-1 has been revised as shown in Response E-12. See also Response E-13, which notes the inclusion of related anticipated permits and approvals.

E-20 The comment correctly notes that compliance with applicable laws is the Applicant's responsibility. Questions of compliance with otherwise applicable laws are outside the CEQA process, which focuses on analysis of the potential significant environmental effects of agencies'

discretionary decisions and the avoidance or reduction of those effects. The County defers to the U.S. Fish and Wildlife Service for review and enforcement of compliance with the Migratory Bird Treaty Act and to CDFW for review and enforcement of applicable provisions of the Fish and Game Code. For purposes of the EIR, see DEIR Section 2.9.4 (p. 2-20), which includes the Applicant's commitment to compliance with applicable laws and standards.

The County acknowledges CDFW's preference that ground disturbance occur outside of the nesting season. The comment clarifies the nesting bird season as being February 1 through September 15th. In response to this comment, references to nesting bird season in Mitigation Measure 4.5-3 for Swainson's hawk next avoidance (DEIR, pp. 4.5-20, 4.5-21) and Mitigation Measure 4.5-4 for protection of migratory birds and other raptors (DEIR, p. 4.5-21) have been revised as follows and as shown in FEIR Chapter 3:

Mitigation Measure 4.5-3: Swainson's Hawk Nest Avoidance

For Swainson's hawk, preconstruction activity surveys shall be conducted for Swainson's hawk nests in accordance with the Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000). Timing and the number of phases of surveys can be adjusted based on the timing of the construction schedule. The surveys may be phased to coincide with active construction areas plus a 0.5-mile buffer of those areas.

If an active Swainson's hawk nest is discovered during the nesting season (~~March~~ February 1 through September 15) within 0.5 mile of active construction, a qualified biologist should complete an assessment of the potential for current construction activities to impact the nest. The assessment would consider the type of construction activities (e.g., noise levels and duration), the location of construction relative to the nest and pre-existing disturbance levels (e.g., construction activities in historically agricultural land versus activities in non-agricultural land), the visibility of construction activities from the nest location (e.g., topography or vegetation that could block line-of-sight to the nest), the number of construction personnel required to perform activities within the setback, and other existing disturbances in the area that are not related to construction activities of this project. Based on this assessment, the biologist will determine if construction activities can proceed and the level of nest monitoring required. When conducting the assessment, the biologist will consider the following levels of construction activity, with higher levels of activity requiring greater caution in determining setbacks:

- Light construction activity such as fence installation and limited vehicle access. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels in closer proximity to the occupied nests.
- Moderate and/or isolated construction activity such as grading and construction of substation, substation-access road, inverter skids, and manual installation of solar panels. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels beyond a moderate distance from the occupied nests.

Heavy construction activity across a large area of the Project and/or using louder equipment such as pile drivers, concrete saws, or jackhammers. Noise levels for this type of activity will depend on location of the activities relative to the nest and allowing these activities within the 0.5-mile setback would require coordination with CDFW.

Mitigation Measure 4.5-4: Protection of Migratory Birds and Other Raptors

If construction or decommissioning is scheduled to commence outside of nesting season (September ~~1~~16 to January 31), no preconstruction surveys or additional measures are required for nesting birds, including raptors. During the nesting bird breeding season (February 1 to ~~August 31~~September 15), to avoid impacts to nesting birds in the Project site and immediate vicinity, a qualified biologist shall conduct preconstruction surveys of all potential nesting habitat within the Project site where vegetation removal or ground disturbance is planned. The survey shall be performed within the site and also include potential nest sites within 300 feet of the site in areas where access to neighboring properties is available or visible using a spotting scope. Surveys shall be conducted no more than ~~14~~10 days prior to construction or decommissioning activities. If construction is halted for ~~14~~10 days or more, the area shall be re-surveyed prior to re-initiating work.

Surveys may be phased to occur shortly before a portion of the Project site is disturbed. The surveying biologist must be qualified to determine the status and stage of nesting by migratory birds and all locally breeding raptor species without causing intrusive disturbance. If active nests are found, a suitable buffer (~~e.g.,~~ generally 300-500 feet for common raptors; ~~100~~250 feet for passerines, to be determined in the field by a qualified biologist) shall be established around active nests by a qualified biologist and no construction within the buffer allowed until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). Encroachment into the buffer may occur at the discretion of a qualified biologist in coordination with CDFW. The avoidance buffer will remain in place until the biologist has determined that the young are no longer reliant on the adults or the nest, or if breeding attempts have otherwise been unsuccessful.

To minimize the potential for avian injury and mortality from collision and electrocution, the Project will adhere to current Avian Power Line Interaction Committee (APLIC) design standards for overhead powerlines and associated structures, including use of avian-safe line designs, and installation of devices to make powerlines visible to birds (APLIC 2006, 2012).

E-21 Consistent with this recommendation, Mitigation Measure 4.5-3 includes pre-construction nesting surveys for nesting migratory birds and Swainson's hawk. See also Response E-20. The sufficiency of the area to be considered in preconstruction surveys shall be determined, as stated in Mitigation Measure 4.5-3, by a qualified biologist in accordance with published methodologies and with consideration of the factors identified. The County has received and considered the recommendations in this comment and has included them in the record where they may be considered by decision-makers. However, because the comment does not question the adequacy or accuracy of the DEIR, no revisions have been made to the DEIR specifically in response to this comment.

E-22 The County has received and considered the recommendations for continuous monitoring and minimum no-disturbance buffers for active nests. The recommendations are generally consistent with DEIR Mitigation Measure 4.5-3 and Mitigation Measure 4.5-4, as revised (see Response E-20). However, because the comment does not question the adequacy or accuracy of the DEIR, no revisions have been made to the DEIR specifically in response to this comment.

E-23 The County acknowledges CDFW input about any variance from a no-disturbance buffer; however, because the comment does not question the adequacy or accuracy of the DEIR, no revisions have been made to the DEIR specifically in response to this comment.

E-24 The DEIR discloses the federal listed status of relevant species in Section 4.5 (DEIR, p. 4.5-1 et seq.) including, but not limited to, San Joaquin kit fox (DEIR, p. 4.5-7). Relevant provisions of the federal Endangered Species Act of 1973 are summarized in DEIR Section 4.5.1.3 (p. 4.5-8). As indicated in Response E-20, compliance with applicable laws is the Applicant's responsibility. Questions of compliance with otherwise applicable laws are outside the CEQA process, which focuses on analysis of the potential significant environmental effects of agencies' discretionary decisions and the avoidance or reduction of those effects. The County defers to the U.S. Fish and Wildlife Service for review and enforcement of compliance with the Endangered Species Act.

E-25 The County acknowledges the state policy expressed in Public Resources Code section 21003(e), which states: "Information developed in environmental impact reports and negative declarations be incorporated into a data base which may be used to make subsequent or supplemental environmental determinations." The EIR for this Project (including the biological resources technical reports provided in DEIR Appendix F) has been incorporated into the CEQAnet Web Portal maintained by the California Governor's Office of Planning and Research for CEQA documents. As stated in DEIR Section 4.5 (p. 4.5-1), the DEIR's analysis of impacts on biological resources "is based in part on the Biological Resources Report for Sonrisa Solar Park Project that was prepared on the Applicant's behalf. A copy of the report is provided in Appendix F-1. The preparers of this Draft EIR independently reviewed this and other materials prepared by or on behalf of the Applicants and determined them to be suitable for reliance on (in combination with other materials included in the formal record) in the preparation of this Draft EIR." The County did not independently conduct field surveys for the Project. Whether those who conducted the field surveys reported any special-status species and natural communities to the California Natural Diversity Database (CNDDB) using the CNDDB field survey form is beyond the scope of the County's EIR for the Project.

E-26 The County acknowledges receipt of this input regarding the obligation in Fish & Game Code section 753.5 that project applicants pay a filing fee to the County Clerk upon the filing of a Notice of Determination for projects for which an EIR has been approved. This comment has been included in the record where it may be reviewed by the Applicant; however, the comment does not affect the adequacy or accuracy of the analysis or conclusions in the DEIR.

E-27 The contact information provided in this comment has been added to the Project-specific distribution list for receipt of CEQA notices about the Project.

Email: jshaw@FresnoCountyCA.gov

RE: County of Fresno, Sonrisa Solar Project Draft Environmental Impact Report (SCH# 2020110008).

Dear Jeremy Shaw,

On behalf of the Carpenters Union Local 701 ("**Local 701**"), my Office is submitting these comments for the County of Fresno's ("**County**") Draft Environmental Impact Report ("**Draft EIR**" or "**DEIR**") for the Sonrisa Solar Project ("**Project**").

As noted in the DEIR, "[t]he Project consists of three main components: a solar PV facility with 200 MWAC generating capacity; an energy storage system with 184 MWAC battery storage capacity; and an extension to an existing gen-tie line connecting with the Tranquility Switching Station . . . Other necessary infrastructure would include a Project substation, a permanent operation and maintenance building, a Supervisory Control and Data Acquisition System (SCADA), meteorological data collection equipment, telecommunications infrastructure, access roads, parking, and security fencing." (DEIR, p. 2-5). F-1

Local 701 represents thousands of union carpenters in Fresno County and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects. F-2

Individual members of Local 701 live, work, and recreate in the County and surrounding communities and would be directly affected by the Project's environmental impacts.

Local 701 expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121. F-3

Local 701 incorporates by reference all comments related to the Project or its CEQA review, including the Environmental Impact Report. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties). F-4

Moreover, the Local 701 requests that the County provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. F-5

I. THE COUNTY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT F-6

The county should require the Project to be built by contractors who participate in a Joint Labor-Management Apprenticeship Program approved by the State of California and make a commitment to hiring a local workforce.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note: F-7

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the

> reduction would vary based on the location and urbanization level of the project site.

F-7 cont.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

F-8

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

F-9

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

F-10

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would

[1] California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf.

[2] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

> include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

F-10 cont.

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

F-11

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

F-12

The County should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

F-13

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

II. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("**CEQA Guidelines**"), § 15002, subd. (a)(1).[5] At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made." *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

F-14

1. Background Concerning Environmental Impact Reports

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

F-15

While the courts review an EIR using an 'abuse of discretion' standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial

F-16

[5] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

F-16 cont.

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

F-17

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the "fair argument" standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of "B" St.* v. *City of Hayward* (1980) 106 Cal.3d 988, 1002.

F-18

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that "may have a significant effect on the environment." PRC, § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222

F-19

Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

F-19 cont.

"Significant effect upon the environment" is defined as "a substantial or potentially substantial adverse change in the environment." PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

F-20

This standard sets a "low threshold" for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen,* 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of "B" St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

F-21

2. DEIR Fails to Properly Support Its Findings of No Significant Impacts, Even With The Added Mitigation Measures.

a. Air Quality

F-22

The DEIR has determined that there will be no significant impacts on air quality. However, this finding relies on the implementation of mitigations, such as compliance with the SJVAPCD Rule 9510, that are not included as mitigations subject to the Mitigation Monitoring Program. Rule 9510, specifically, requires exhaust emissions from construction equipment greater than 50 horsepower must be mitigated to 20

percent below the statewide average NOx emissions and 45 percent below statewide average PM10 exhaust emissions. Further reductions are also required for the operational stage of the Project under Rule 9510. F-23

Importantly, Table 4.4-6 establishes that without the inclusion of this rule, the Project's construction NOx emissions would exceed applicable thresholds. (DEIR, p. 4.4-23). However, the calculations for determining the reduced NOx emissions are not clearly included in the DEIR or Appendix E. As such, the DEIR fails to explain how these reductions will be achieved. Further information on these reductions is necessary to create a fully compliant EIR. F-24

Additionally, Rule 9510 requires the submission of an Air Impact Assessment ("**AIA**") application no later than applying for a final discretionary approval with the public agency. This application, if already submitted, should be included in the DEIR to allow public review of the specific mitigation measures the Project proposes to reduce the NOx emissions. If not yet submitted, the AIA application should be included in any future environmental review documents for this Project. F-25

As currently written, the finding of no significant impact on air quality relies upon unsupported assumptions. Local 701 requests the County revise and recirculate the DEIR to include the missing information, as well as include compliance with the various SJVAPCD Rules in the Mitigation Monitoring Program. F-26

b. Noise

As discussed in the DEIR, the County's General Plan establishes a maximum allowable noise exposure level for residential land use of 60 dBA CNEL. (DEIR, p. 4.14-9). For the Project, the two nearest sensitive receptors, both residences, are approximately 185 feet from the Project site boundary. An additional residential sensitive receptor is located approximately 750 feet of the Project site boundary. (DEIR, p. 4-14-19). F-27

While the County Code exempts construction activities from the noise standards found in Table 4.14-2, the ultimate residential land use noise exposure limit established by the General Plan is still applicable to the Project. As depicted in Table 4.14-4, the Project's construction phase will result in noise levels in exceeded on the 60 dBA limit for nearly all activities at all three residential locations. F-28

TABLE 4.14-4
OUTDOOR CONSTRUCTION NOISE LEVELS BY PHASE AT CLOSEST NOISE-SENSITIVE RECEPTORS

Construction Phase	Equipment Used	Estimated Construction Noise Level at Sensitive Receptors (dBA, Leq)[a]	
		Receptors R-1 and R-2 at 185 feet	Receptor R-3 at 750 feet
Fence installation	Front loader with auger (1), Forklift (1), Flatbed truck (1)	70	57
Site Preparation and clearing/grading	Water trucks (4), Grader (2), Bulldozer (1), Scraper (1), Roller (2), Sheepsfoot roller (2), Tractor with mower attachment (1)	77	64
Underground work (trenching)	Excavator (2), Trenching machine (2), Sheepsfoot roller (1), Water truck (1), Soil mix rig (1), Forklift (1) Vibratory pile driver (5)	90	77
System installation	Forklift (10), Small crane (1), Dump truck (5), Vibratory pile driver (5), Pickup truck (1), Water truck (2), Generator (6)	89	77
Gen-tie installation	Line truck with spool trailer (1), Pick-up (3), Boom truck with bucket (1)	66	NA
Energy Storage System (ESS) construction	Backhoe (1), Small Crane (1), Pickup truck (5), Forklift (4)	75	63
Testing, commissioning, site cleanup	Pickup Truck (10), Water truck (1), Grader (2), Front-end loader (1)	75	62

NOTE:

a The Noise Technical Report identified receptor locations R-1 and R-2 as being 165 feet from the Project boundary and receptor location R-3 as 315 from the Project boundary. The noise levels for these receptor locations have been revised to account for 185 feet for R-1 and R-2 from the nearest Project boundary instead of 165 feet, and 750 feet for R-3 from the nearest Project boundary instead of 315 feet.

SOURCES: Appendix J (Table 11), ESA 2021b.

F-29

While the Project has attempted to mitigate the noise impacts on these sensitive users through a Construction Noise Reduction Plan, nothing in the proposed plan would reduce the expected noise levels. Important mitigation measures, such as noise barriers, are missing from the proposed plan. Further, no data has been provided to establish that the proposed plan will result in a less than significant impact on these residences.

F-30

The County must revise the DEIR to account for further mitigation measures, such as noise barriers, and provide the data necessary to confirm that the Construction Noise Reduction Plan will result in actual reductions to the estimated noise exposure levels at the three sensitive receptor locations.

F-31

c. Biological Resources

Local 701 appreciates the detailed information on the surveys performed, including multiple protocol level surveys, as outlined in Appendix F. While the detailed surveys are critical to properly identifying potential special status plants and species on site, the timing of these surveys are also critical. While the Project has implemented numerous mitigation measures surrounding potential biological resources impacts, concerns remain as to the relevance of the original surveys. Importantly, many of the surveys were performed in early 2019, before the Notice of Preparation was even published. In the *five years* since these surveys have taken place, there have been significant environmental changes, such as increased rainfall, that may have an impact on the species and plants that were originally assumed to be not present on the site. F-32

As such, Local 701 requests that the County perform an updated set of scouting surveys to determine if any new special status plants or species are now present on site. Any new findings should be included in an updated and revised DEIR. F-33

III. CONCLUSION

Based on the foregoing, the County must revise and recirculate the DEIR to address the areas of concern including air quality, noise, and biological resources. If the County has any questions, please reach out to my office. F-34

Sincerely,

Grace Holbrook
Attorneys for Carpenters Local 701

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling (Exhibit A); F-35

Air Quality and GHG Expert Paul Rosenfeld CV (Exhibit B); and F-36

Air Quality and GHG Expert Matt Hagemann CV (Exhibit C).

2.4.6 Letter F: Carpenters Local 701

F-1 The summary of Project information is consistent with DEIR Chapter 2, *Project Description*. Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no more detailed response is provided.

F-2 The role of Local 701 as a carpenters' union and the commenter's interest in planning and community development in Fresno County is acknowledged. However, because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no more detailed response is provided.

F-3 Consistent with Public Resources Code section 21167.6(e)(6), "All written comments received in response to, or in connection with, environmental documents prepared for the project, including responses to the notice of preparation" that are timely received would be included in the record of proceedings for the Project.

F-4 Under CEQA, the lead agency "shall evaluate comments on environmental issues" received from commenters who have reviewed a draft EIR and prepare written responses that "describe the disposition of each significant environmental issue that is raised by commenters" (Public Resources Code §21091(d); CEQA Guidelines §15088(c)). Because CEQA does not require that responses be provided for comments that do not address the adequacy or accuracy of the environmental analysis or that do not identify an environmental issue (Id.; see also CEQA Guidelines §15204(a)), no more detailed response is provided here.

F-5 The commenter has been added to the County's distribution list for receipt of CEQA notifications about the Project.

F-6 As stated in DEIR Section 4.15.2 (p. 4.15-5), "Consistent with the County of Fresno Solar Facility Guidelines, the applicant has committed to recruiting and hiring from the local workforce to the extent reasonable (see Appendix I-2)." See also, DEIR Appendix I-2 regarding the Project's consistency with the County's Solar Facility Guidelines.

F-7 See Response F-6 regarding the Applicant's commitment to recruiting and hiring from the local workforce to the extent reasonable.

F-8 See Response F-6 regarding the Applicant's commitment to recruiting and hiring from the local workforce to the extent reasonable. DEIR Section 4.9 (p. 4.9-1 et seq.) concludes that the Project would cause a less-than-significant impact on GHG emissions. This comment does not address the adequacy or accuracy of the analysis but has been included in the record where it may be considered by decision-makers and others.

F-9 See Response F-6 regarding the Applicant's commitment to recruiting and hiring from the local workforce to the extent reasonable. DEIR Section 4.15 (p. 4.15-1 et seq.) concludes that the Project (including accommodation of the anticipated workforce) would cause a less-than-significant impact on Population and Housing. Potential impacts resulting from vehicle miles traveled (VMT) for workforce access to the Project site is impacts analyzed in DEIR Section 4.18

(p. 4.18-1 et seq.). As stated in DEIR Section 4.18, the Project would not result in a substantial increase in VMT that would conflict or be inconsistent with CEQA Guidelines Section 15074.3(b). This comment does not address the adequacy or accuracy of the analysis, but has been included in the record where it may be considered by decision-makers and others.

F-10 This comment does not address the adequacy or accuracy of the environmental analysis but has been included in the record where it may be considered by decision-makers and others. See Response F-9.

F-11 This comment does not address the adequacy or accuracy of the environmental analysis but has been included in the record where it may be considered by decision-makers and others.

F-12 This comment does not address the adequacy or accuracy of the environmental analysis but has been included in the record where it may be considered by decision-makers and others. The commenter's reference to the Affordable Housing and High Road Job Act of 2022 is not pertinent to the Project, which is not a housing project. Nor is this regulation applicable to the analysis documented in the DEIR.

F-13 See Response F-6 regarding the Applicant's commitment to recruiting and hiring from the local workforce to the extent reasonable. As indicated in Response F-8, the Project would cause a less than significant impact related to GHG emissions. As indicated in Response F-9, the DEIR reaches the same conclusion of less than significant for Transportation, including VMT. See also DEIR Section 4.4 (p. 4.4-1 et seq.), which concludes that the Project's impact on Air Quality also would be less than significant.

F-14 Specifics of the CEQA Guidelines and judicial decisions interpreting CEQA speak for themselves. Under CEQA, the lead agency "shall evaluate comments on environmental issues" received from commenters who have reviewed a draft EIR and prepare written responses that "describe the disposition of each significant environmental issue that is raised by commenters" (Public Resources Code §21091(d); CEQA Guidelines §15088(c)). Because CEQA does not require that responses be provided for comments that do not address the adequacy or accuracy of the environmental analysis or that do not identify an environmental issue (Id.; see also CEQA Guidelines §15204(a)), no more detailed response is provided to this comment.

F-15 See Response F-14. Because this comment does not address the adequacy or accuracy of the DEIR, a detailed response is not provided.

F-16 See Response F-14. Because this comment does not address the adequacy or accuracy of the DEIR, a detailed response is not provided.

F-17 See Response F-14. Because this comment does not address the adequacy or accuracy of the DEIR, a detailed response is not provided.

F-18 See Response F-14. Because this comment does not address the adequacy or accuracy of the DEIR, a detailed response is not provided. In any event, the County did prepare an EIR for this Project.

F-19 See Response F-18: the County did prepare an EIR for this Project.

F-20 See Response F-18: the County did prepare an EIR for this Project.

F-21 See Response F-18: the County did prepare an EIR for this Project.

F-22 Compliance with SJVAPCD Rule 9510 (also known as Indirect Source Review) is not a mitigation measure. To the contrary, compliance with Rule 9510 is an independently enforceable regulatory requirement for all new development projects that would receive a discretionary approval from a public agency and would equal or exceed specific size limits called "applicability thresholds" established at levels intended to capture projects that emit at least 2 tons of NOx and/or 2 tons of PM10 per year. The applicability threshold relative to the Project is 9,000 square feet.[7] SJVAPCD and the County of Fresno do not consider the applicability thresholds to be CEQA thresholds for the assessment of significant impacts.

Because the area of the Project would exceed 9,000 square feet and construction of the Project would exceed 2 tons of NOx and 2 tons of PM10 per year, SJVAPCD would require the Project to comply with Rule 9510 regardless of whether the Project would result in a significant impact. Therefore, the County has not identified compliance with Rule 9510 as a mitigation for purposes of CEQA. This approach is appropriately reflected as such in the DEIR Impact 4.4-2 analysis.

To provide additional context regarding the requirements of SJVAPCD Rule 9510, the following has been added to DEIR Section 4.4.1.3, *Regulatory Setting*, under the heading of *San Joaquin Valley Air Pollution Control District*, following Table 4.4-4.

> Rule 9510 (Indirect Source Review
>
> Some projects are required to implement PM and NOx reduction measures as required under SJVAPCD Rule 9510, Indirect Source Review (ISR), which was adopted by the SJVAPCD's Governing Board in 2005 to reduce the impacts of growth in emissions resulting from new land development in the SJVAPCD. SJVAPCD Rule 9510 applies to new development projects that would receive a discretionary approval from a public agency and would equal or exceed specific size limits called "applicability thresholds." The applicability thresholds were established at levels intended to capture projects that emit at least 2 tons of NO_X and/or 2 tons of PM_{10} per year. The applicability threshold relative to the Project is 9,000 square feet.

F-23 The construction emission reduction requirements of Rule 9510 are noted in DEIR Section 4.4, *Air Quality*, on page 4.4-24. As shown in Table 4.4-9, Project operation would generate less than 2 tons per year of NOx and PM10 and would therefore not be anticipated to be subject to additional emissions reductions under Rule 9510.

F-24 As stated in DEIR Section 4.4.3.1, *Methodology* (see p. 4.4-19, third paragraph), to estimate the emissions reductions that would be associated with the Project's required compliance with SJVAPCD Rule 9510, the Sacramento Metropolitan Air Quality Management District's

[7] San Joaquin Valley Air Pollution Control District, 2017. San Joaquin Valley Air Pollution Control District Rule 9510 Indirect Source Review. Adopted December 15, 2005; Amended December 21, 2017. Available online at: https://www.valleyair.org/rules/currntrules/r9510-a.pdf. Accessed August 21, 2024.

Construction Mitigation Program, Version 8.0, was used. Those calculations for determining the minimum required NOx emissions reductions are shown at the end of Appendix A of DEIR Appendix E. As shown, to reduce NOx emissions by at least 20 percent relative to the Statewide fleet average, the Project off-road equipment fleet emission rate would need to be reduced from 2.95 grams per brake horsepower-hour (g/bhp-hr) to 1.78 g/bhp-hr. As stated by SJVAPCD in its DEIR Comment Letter C (Final EIR Section 2.4.3, above), Comment C-8, this reduction in emissions could be achieved through the use of clean air design elements (such as use of Tier 4 equipment), and/or through the payment of a fee that would ultimately fund incentive projects to achieve off-site emissions reductions. The exact details of how those emission reductions would be achieved would be worked out between the Applicant and the SJVAPCD through its Rule 9510 compliance process.

In addition, two errors have been discovered in Table 4.4-6: first, the order of the rows has been revised to show the "Significance Thresholds" and "Exceeds Thresholds?" rows after the "Total Annual Emissions with Rule 9510 Compliance" to clarify that significance is not assessed prior to the application of the Rule 9510 compliance emissions reductions; and second, the total annual emissions with Rule 9510 compliance value for NOx has been updated to accurately reflect Appendix A of DEIR Appendix E, which shows that value as 9.07491 tons. Therefore, as shown below, DEIR Table 4.4-6 has been revised as follows:

TABLE 4.4-6
MAXIMUM ANNUAL CONSTRUCTION EMISSIONS

Max. Rolling 12 Month Period	Annual Emissions (tons per year)					
	ROG	NOx	CO	SO_x	PM_{10}	$PM_{2.5}$
Annual Project Emissions (not including water truck-related emissions)	1.4	11.4	10.7	0.05	7.3	1.3
Water Truck Emissions	<0.1	0.6	0.3	<0.1	<0.1	<0.1
Total Annual Emissions	1.4	12.0	11.0	<0.1	7.3	1.3
~~Significance Threshold~~	~~10~~	~~10~~	~~100~~	~~27~~	~~15~~	~~15~~
~~Exceeds Threshold?~~	~~No~~	~~**Yes**~~	~~No~~	~~No~~	~~No~~	~~No~~
Total Annual Emissions with Rule 9510 Compliance	NA	~~**9.7**~~ **9.1**	NA	NA	7.2	NA
Significance Threshold	10	10	100	27	15	15
Exceeds Threshold?	No	No	No	No	No	No
Significance Impact?	NA	No	NA	NA	No	NA

NOTE:
NA = not applicable.
SOURCE: Table 7 of Appendix E-1 and Appendix E-2

F-25 See Response C-9, above. The County acknowledges the suggested submittal timing of the Applicant's Air Impact Analysis (AIA) application to the SJVAPCD. CEQA does not require an EIR to include copies of permit applications, and the County declines to include an AIA application in the EIR for this Project. Members of the public are welcome to review the AIA

application and any associated mitigation measures or permit conditions as part of SJVAPCD's permit process.

F-26 See Responses F-22 through F-25. Because it is not clear from the comment what other assumptions the commenter believes are unsupported, the County does not have sufficient information to provide a more detailed response.

CEQA and the CEQA Guidelines require recirculation of a Draft EIR for an additional round of comments only if significant new information is added after the close of the public comment period (Public Resources Code §21092.1; CEQA Guidelines §15088.5). No significant new information has been added to the Draft EIR. "Information" can include revisions in the project or the environmental setting as well as additional data or other information (CEQA Guidelines §15088.5). Recirculation is intended to be the exception, not the general rule. *Save Our Peninsula Committee v. Monterey County Board of Supervisors* (2001) 87 Cal.App.4th 99. CEQA Guidelines section 15088.5(a) provides four examples of "significant new information" requiring recirculation, including:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.

(4) The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

The fourth example is based on the court's decision in a specific lawsuit and is intended to capture circumstances in which fundamental information is omitted in the Draft EIR and then added after the public comment period has closed. *Mountain Lion Coalition v. Fish & Game Commission* (1989) 214 Cal.App.3d 1043.

Compliance with relevant regulatory standards can provide a basis for determining that the project will not have a significant environmental impact. *Tracy First v. City of Tracy* (2009) 177 CA 4th 912. Here, the County is entitled to assume that the Applicant will comply with independently enforceable legal obligations, including applicable SJVAPCD Rules, without requiring it as a mitigation measure. See, for example DEIR Section 2.9.4 (p. 2-20), which discloses the Applicant's commitment to "comply with all applicable laws and standards, including, but not limited to… air quality (such as the San Joaquin Valley Air Pollution Control District's indirect source rule and fugitive dust regulation)." Further, the County has determined based on the Project-specific analysis of potential impacts included in DEIR Section 4.4 (p. 4.4-1 et seq.) that the effect of regulatory compliance would be sufficient to prevent significant adverse impacts. For these reasons, no significant new information has been added to the DEIR such as would trigger recirculation. Accordingly, the County declines the invitation in this comment to

include compliance with the various SJVAPCD Rules in the mitigation monitoring program and the request to recirculate the DEIR.

F-27 This comment is consistent with information provided in DEIR Section 4.14.1.2, *Environmental Setting* (pp. 4.14-5 through 4.14-7), Section 4.14.1.3, *Regulatory Setting* (p. 4.14-9), and Section 4.14.3.2, *Direct and Indirect Effects of the Project* (p. 4.14-19). Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no more detailed response is provided.

F-28 The Fresno County General Plan Countywide land use compatibility guidelines, including the maximum allowable noise exposure level of 60 dBA CNEL for residential land uses, would be applicable to long-term operation of the Project, but would not apply to its short-term construction activities. Instead, pursuant to General Plan Policy HS-G.6, the County regulates short-term construction-related noise in accordance with the County's Noise Control Ordinance (see DEIR page 4.14-9). For discussion of Project operational noise levels relative to the Countywide land use compatibility guideline of 60 dBA CNEL for residential land uses, refer to DEIR pages 4.14-18 through 4.14-20, including Table 4.14-5, which shows that operational noise levels at the nearest sensitive receptors would be up to 44 dBA CNEL. Regarding General Plan consistency more generally, see DEIR Section 4.12, *Land Use and Planning* (p. 4.12-1 et seq.) and DEIR Appendix I-1.

F-29 This table provided in this comment is consistent with Table 4.14-4 provided in DEIR Section 4.14.3.2, *Direct and Indirect Effects of the Project* (p. 4. 14-16). Because this comment does not address the adequacy or accuracy of the environmental analysis or identify an environmental issue, no more detailed response is provided.

F-30 As discussed in the first paragraph of DEIR Section 4.14.3.1, *Methodology* (p. 4.14-12), short-term noise level increases from construction and decommissioning activities are evaluated relative to whether they would conflict with local policies or standards. The analysis determined that nighttime construction activities near the northern Project boundary would exceed the County’s nighttime noise standard and would result in a potentially significant impact.

Implementation of Mitigation Measure 4.14-1, *Noise Reduction for Construction Activities* (p. 4.14-17), is recommended to reduce short-term nighttime construction noise levels. The measure would reduce nighttime noise levels near the closest sensitive receptors. For example, to the measure limits the use of major excavating, pile driving, and earth-moving machinery, which generate the highest noise levels of the proposed equipment, to daytime hours; and limits any evening and nighttime shift work to the southern and/or western portions of the Project site, away from the nearest sensitive receptors, which would attenuate noise level. See the discussion of DEIR Impact 4.14-1 (DEIR, pp. 4.14-14 through 4.14-18).

Nonetheless, to ensure that Mitigation Measure 4.14-1 would reduce the potential nighttime construction noise impact to a less-than-significant level, the DEIR has been revised to include a performance standard at the end of the measure as follows:

Mitigation Measure 4.14-1: Noise Reduction for Construction Activities

At least 30-days prior ~~Prior~~ to conducting nighttime construction activities ~~issuance of construction permits~~ for the proposed project, the Project Owner shall submit to the County for approval a Construction Noise Reduction Plan to be implemented by all contractors as a condition of contract. Contents of the Plan should include at a minimum:

- Maintain all construction tools and equipment in good operating order according to manufacturers' specifications;
- Limit use of major excavating, pile driving, and earth-moving machinery to daytime hours;
- Equip any internal combustion engine used for any purpose on the job or related to the job with a properly operating muffler that is free from rust, holes, and leaks;
- For construction devices that utilize internal combustion engines, ensure the engine's housing doors are kept closed, and install noise-insulating material mounted on the engine housing consistent with manufacturers' guidelines, if possible;
- Limit possible evening and nighttime shift work to the southern and/or western portions of the Project site conducting low noise activities such as welding, wire pulling, and other similar activities, together with appropriate material handling equipment; and
- Utilize a Complaint Resolution Procedure to address any noise complaints received from residents.
- The Plan shall include documentation that quantifies and substantiates how the contents of the Plan shall ensure that any nighttime construction noise levels would not exceed the Fresno County exterior noise standard of 45 dBA Leq at the closest residences.

F-31 See Response F-30 regarding the construction noise reduction plan required by DEIR Mitigation Measure 4.14-1. The County acknowledges the commenter's opinion that the DEIR should be revised to require additional mitigation measures (such as noise barriers); however, the comment provides no data or other evidence in support of the request. Accordingly, the County has made no change to the DEIR in response to this comment.

F-32 The provisions of the CEQA Guidelines governing the analysis of environmental impacts specify that the baseline to be used in identifying the degree of project-caused change generally should be described as the physical conditions that exist in the area affected by the project at the time the EIR process begins (CEQA Guidelines §§15125[a][1], §15126.2[a]). For this Project, the Notice of Preparation of an EIR presented in DEIR Appendix A, Scoping Report, marks the formal initiation of the EIR process – it is dated November 2, 2020. The comment provides no data or other information substantiating the suggestion that technical reports prepared in 2019 might somehow be deficient based on the date of their preparation relative to the EIR. To the contrary, DEIR Section 4.5 (p. 4.5-1) explains that the analysis presented in the evaluation of potential impacts to biological resources "is based in part on the Biological Resources Report for Sonrisa Solar Park Project that was prepared on the Applicant's behalf. A copy of the report is provided in Appendix F-1. The preparers of this Draft EIR independently reviewed this and other materials prepared by or on behalf of the Applicants and determined them to be suitable for reliance on (in combination with other materials included in the formal record) in the preparation of this Draft EIR." DEIR Section 4.5.5 (p. 4.5-28 et seq.) identifies nearly 50 additional sources of data or

other information that were relied upon in the analysis in addition to the reports provided in DEIR Appendix F.

Nonetheless, in the case of rare plants, no habitat for rare plant species remains on the site, due to "ongoing disturbance from agricultural production and management and a lack of suitable natural communities" (DEIR p.4.5-3). Thus, there is no potential for rare plants to have moved onto the site. However, special-status wildlife species San Joaquin kit fox and burrowing owl had suitable habitat on the site, and may have occupied it in the years since it was last surveyed. Swainson's hawk also actively nests in the area. For this reason, Mitigation Measure 4.5-1 (DEIR, p. 4.5-17 et seq.) includes pre-construction burrow surveys of the site for signs of these species, according to the USFWS (2011) protocol for kit fox and CDFW (2012) staff report for burrowing owl. In addition, Mitigation Measure 4.5-3 (DEIR, p. 4.5-20 et seq.) provides for nesting bird surveys for Swainson's hawk and other migratory birds, with avoidance buffers if active nests are found.

A lead agency is not required to conduct every test or perform all research, studies, or experimentation at the commenter's request (Public Resources Code §21091[d][2]B]); CEQA Guidelines §15204[a]). An EIR need not provide all information reviewers request, as long as the report, when looked at as a whole, reflects a good faith effort at full disclosure (CEQA Guidelines §15204[a]). CEQA does not require the County to update the baseline for this EIR, and the County declines to do so.

F-33 See Response F-32, which explains why the County is not updating the biological resources surveys. See Response F-26 regarding the limited circumstances under which CEQA requires recirculation. Because no significant new information has been added to the DEIR in response to this comment, recirculation is not required.

F-34 See Response F-26 regarding the limited circumstances under which CEQA requires recirculation. Because no significant new information has been added to the DEIR regarding the analysis of impacts on air quality, noise, or biological resources, CEQA does not require recirculation (Public Resources Code §21092.1; CEQA Guidelines §15088.5). Accordingly, the County declines to conduct it.

F-35 The County acknowledges receipt of, and has reviewed, Exhibit A to the comment letter regarding local hire requirements and considerations for GHG modeling. See Response F-6, which discusses the Applicant's and County's commitments to the local workforce. No change to the DEIR is warranted nor has been made as a result of information presented in the attachment for the reasons explained in Response F-6. Nonetheless, the attachment is included in the record where it may be reviewed by decision makers and the public.

Due to their length, Exhibits A, B, and C to this comment letter have been included as Appendix D to this Final EIR.

F-36 CEQA requires a lead agency to "evaluate comments on environmental issues" received from commenters who have reviewed a draft EIR and prepare written responses that "describe the disposition of each significant environmental issue that is raised by commenters" (Public Resources Code §21091(d); CEQA Guidelines §15088(c)). The County acknowledges receipt of the resumes

provided for Paul Rosenfeld, Ph.D., and Matthew F. Hagemann, P.G., C.Hg., QSD, QSP. However, because the information they contain does not identify an environmental issue or address the adequacy or accuracy of the environmental analysis, no more detailed response is provided.

CHAPTER 3
Revisions to the Draft EIR

3.1 Introduction

The following changes have been made to the previously published text of the Draft EIR. Changes to the Draft EIR include minor corrections made to improve writing clarity, grammar, and consistency; clarifications, additions, or deletions resulting from specific responses to comments; and changes to update information in the Draft EIR – the changes do not constitute "significant new information" requiring recirculation (see Public Resources Code §21092.1; CEQA Guidelines §15088.5). Text revisions are organized by the chapter and page number (provided on the left-hand side of the page, below) that appear in the Draft EIR. An explanation of the change, including identification of where it would be made, is provided. The specific additions and deletions use the following conventions:

- Text deleted from the Draft EIR is shown in ~~strike-out text~~.
- Text added to the Draft EIR is shown in <u>underline text</u>.

3.2 Text Changes to the Draft EIR

3.2.1 Executive Summary

Page ES-4 Table ES-1 is modified to remove parcels [APNs 028-071-55, 028-071-35, and 028-071-36] from Project use and to add an alternative reference for APN 028-071-33. Table ES-1 is modified as follows:

TABLE ES-1

Page ES-10 In Table ES-2, Mitigation Measure 4.5-1: Protection of Special-Status Species During Construction is revised as follows:

Mitigation Measure 4.5-1: Protection of Special-Status Species During Construction

Preconstruction surveys shall be conducted by a qualified biologist for the presence of San Joaquin kit fox and burrowing owl within 14 days prior to commencement of construction activities pursuant to the USFWS (2011) *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox* and CDFW (2012) staff report for burrowing owl Staff Report on Burrowing Owl Mitigation. The surveys shall be conducted in areas of suitable habitat for San Joaquin kit fox and burrowing owl. Areas that have been disked or cultivated within 12 months prior to the start of ground-disturbing activities are not considered suitable. Surveys need not be conducted for all areas of suitable habitat at one time; they may be phased so that surveys occur within 14 days prior to disturbance within active portions of the site. If no potential San Joaquin kit fox dens or burrowing owl burrows are identified, no further mitigation is required. If potential kit fox dens are observed and avoidance is determined to be feasible (as defined in CEQA Guidelines §15364 consistent with the USFWS [2011] *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox*) by a qualified biologist in consultation with the Project owner and the County, buffer distances shall be established prior to construction activities. If potential burrowing owl burrows are observed and avoidance is determined to be feasible (as defined in the CDFW 2012 staff report on burrowing owl) by a qualified biologist in consultation with the Project owner and the County, an exclusion plan will be developed with minimum buffer distances prior to construction activities.

~~If avoidance of the potential dens or burrows is not feasible, the following measures shall be implemented to avoid potential adverse effects to the San Joaquin kit fox and/or burrowing owl:~~

~~If the qualified biologist determines that potential dens or burrows are inactive, the biologist shall excavate these dens by hand with a shovel to prevent foxes or owls from using them during construction.~~

~~If the qualified biologist determines that a potential non-natal kit fox den may be active, an on-site passive relocation program shall be implemented with prior approval from the USFWS. This program shall consist of excluding San Joaquin kit foxes from occupied burrows by installation of one-way doors at burrow entrances, monitoring of the burrow for 72 hours to confirm usage has been discontinued, and excavation and collapse of the burrow to prevent reoccupation. After the qualified biologist determines that the San Joaquin kit foxes have stopped using active dens within the Project boundary, the dens shall be hand-excavated, as stated above for inactive dens. A similar exclusion methodology shall be used for burrowing owl exclusion, as described in the CDFW (2012) staff report on burrowing owl.~~

- If kit fox are detected within the Project site and avoidance is not feasible, the Project owner shall initiate consultation with CDFW to discuss how to avoid take or, if avoidance is not feasible, to acquire an Incidental Take Permit (ITP) pursuant to federal Endangered Species Act Section 7 and California Fish and Game Code section 2081(b), prior to initiating or resuming ground-disturbing activities.

- In the event an active burrowing owl den is documented on the Project site and avoidance following the no-disturbance buffer recommendations outlined in the "Staff Report on Burrowing Owl Mitigation" (CDFG 2012) guidance document is not feasible, the Project owner shall consult with CDFW for guidance on take avoidance and minimization of harm to this species.

Page ES-13 In Table ES-2, Mitigation Measure 4.5-3: Swainson's Hawk Nest Avoidance is revised as follows:

Mitigation Measure 4.5-3: Swainson's Hawk Nest Avoidance

For Swainson's hawk, preconstruction activity surveys shall be conducted for Swainson's hawk nests in accordance with the Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000). Timing and the number of phases of surveys can be adjusted based on the timing of the construction schedule. The surveys may be phased to coincide with active construction areas plus a 0.5-mile buffer of those areas.

If an active Swainson's hawk nest is discovered during the nesting season (~~March~~ February 1 through September 15) within 0.5 mile of active construction, a qualified biologist should complete an assessment of the potential for current construction activities to impact the nest. The assessment would consider the type of construction activities (e.g., noise levels and duration), the location of construction relative to the nest and pre-existing disturbance levels (e.g., construction activities in historically agricultural land versus activities in non-agricultural land), the visibility of construction activities from the nest location (e.g., topography or vegetation that could block line-of-sight to the nest), the number of construction personnel required to perform activities within the setback, and other existing disturbances in the area that are not related to construction activities of this project. Based on this assessment, the biologist will determine if construction activities can proceed and the level of nest monitoring required. When conducting the assessment, the biologist will consider the following levels of construction activity, with higher levels of activity requiring greater caution in determining setbacks:

- Light construction activity such as fence installation and limited vehicle access. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels in closer proximity to the occupied nests.
- Moderate and/or isolated construction activity such as grading and construction of substation, substation-access road, inverter skids, and manual installation of solar panels. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels beyond a moderate distance from the occupied nests.

Heavy construction activity across a large area of the Project and/or using louder equipment such as pile drivers, concrete saws, or jackhammers. Noise levels for this type of activity will depend on location of the activities relative to the nest and allowing these activities within the 0.5-mile setback would require coordination with CDFW.

Page ES-14 In Table ES-2, Mitigation Measure 4.5-4: Protection of Migratory Birds and Other Raptors has been revised as follows:

Mitigation Measure 4.5-4: Protection of Migratory Birds and Other Raptors

If construction or decommissioning is scheduled to commence outside of nesting season (September ~~1~~16 to January 31), no preconstruction surveys or additional measures are required for nesting birds, including raptors. During the nesting bird breeding season (February 1 to ~~August 31~~September 15), to avoid impacts to nesting birds in the Project site and immediate vicinity, a qualified biologist shall conduct preconstruction surveys of all potential nesting habitat within the Project site where vegetation removal or ground disturbance is planned. The survey shall be performed within the site and also include potential nest sites within 300 feet of the site in areas where access to neighboring properties is available or visible using a spotting scope. Surveys shall be conducted no more than ~~14~~10 days prior to construction or decommissioning activities. If construction is halted for ~~14~~10 days or more, the area shall be re-surveyed prior to re-initiating work.

Surveys may be phased to occur shortly before a portion of the Project site is disturbed. The surveying biologist must be qualified to determine the status and stage of nesting by migratory birds and all locally breeding raptor species without causing intrusive disturbance. If active nests are found, a suitable buffer (~~e.g.,~~ generally 300-500 feet for common raptors; ~~100~~250 feet for passerines, to be determined in the field by a qualified biologist) shall be established around active nests by a qualified biologist and no construction within the buffer allowed until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). Encroachment into the buffer may occur at the discretion of a qualified biologist in coordination with CDFW. The avoidance buffer will remain in place until the biologist has determined that the young are no longer reliant on the adults or the nest, or if breeding attempts have otherwise been unsuccessful.

To minimize the potential for avian injury and mortality from collision and electrocution, the Project will adhere to current Avian Power Line Interaction Committee (APLIC) design standards for overhead powerlines and associated structures, including use of avian-safe line designs, and installation of devices to make powerlines visible to birds (APLIC 2006, 2012)

Page ES-16 In Table ES-2, Mitigation Measure 4.14-1: Noise Reduction for Construction Activities has been revised as follows:

Mitigation Measure 4.14-1: Noise Reduction for Construction Activities

At least 30-days prior ~~Prior~~ to conducting nighttime construction activities ~~issuance of construction permits~~ for the proposed project, the Project Owner shall submit to the County for approval a Construction Noise Reduction Plan to be implemented by all contractors as a condition of contract. Contents of the Plan should include at a minimum:

- Maintain all construction tools and equipment in good operating order according to manufacturers' specifications;
- Limit use of major excavating, pile driving, and earth-moving machinery to daytime hours;
- Equip any internal combustion engine used for any purpose on the job or related to the job with a properly operating muffler that is free from rust, holes, and leaks;

- For construction devices that utilize internal combustion engines, ensure the engine's housing doors are kept closed, and install noise-insulating material mounted on the engine housing consistent with manufacturers' guidelines, if possible;
- Limit possible evening and nighttime shift work to the southern and/or western portions of the Project site conducting low noise activities such as welding, wire pulling, and other similar activities, together with appropriate material handling equipment; and
- Utilize a Complaint Resolution Procedure to address any noise complaints received from residents.
- The Plan shall include documentation that quantifies and substantiates how the contents of the Plan shall ensure that any nighttime construction noise levels would not exceed the Fresno County exterior noise standard of 45 dBA Leq at the closest residences.

3.2.2 Project Description

Page 2-3 Footnote (3) is modified to remove parcels APN 028-071-55, 028-071-35, 028-071-36 and to identify an alternative reference for APN 028-071-33. The footnote is modified as follows:

[3] The assessor's parcel numbers (APNs) for the Project are the following: 028-071-15, ~~028-071-36,~~ 028-071-02, 028-071-33/028-070-33, ~~028-071-35,~~ 028-071-40, 028-071-41, 028-071-43, 028-071-44, 028-071-45, ~~028-071-55,~~ 028-071-20, 028-071-07, 028-071-17, 028-071-16, 028-071-21, 028-071-06, 028-071-01, 028-071-04, and 028-071-13; the gen-tie line, including portions shared with the Scarlet Solar project, would cross APNs 028-101-74, 028-101-72, 028-071-39, 028-111-01,028-111-07, 028-111-10, 028-111-13, 028-111-14, 028-111-15, 028-111-16, 028-111-17, and 028-111-19; the proposed shared substation would be on APN 028-071-47.

Page 2-21 The Project's list of permits and approvals has been clarified to add the following anticipated permit:

California Department of Fish and Wildlife-— An incidental take permit (ITP) pursuant to Fish and Game Code §2081(b) would be required if Project implementation could cause "take" of a California Endangered Species Act (CESA)-listed species. Take could occur, for example, if an active Swainson's hawk nest tree needed to be removed or if any occupied San Joaquin kit fox burrows cannot be avoided.

3.2.3 Air Quality

Page 4.4-13 Draft EIR Section 4.4.1.3 To provide additional context regarding the requirements of SJVAPCD Rule 9510, the following text has been added to

DEIR Section 4.4.1.3, *Regulatory Setting*, under the heading of *San Joaquin Valley Air Pollution Control District*, following Table 4.4-4.

Rule 9510 (Indirect Source Review)

Some projects are required to implement PM and NOx reduction measures as required under SJVAPCD Rule 9510, Indirect Source Review (ISR), which was adopted by the SJVAPCD's Governing Board in 2005 to reduce the impacts of growth in emissions resulting from new land development in the SJVAPCD. SJVAPCD Rule 9510 applies to new development projects that would receive a discretionary approval from a public agency and would equal or exceed specific size limits called "applicability thresholds." The applicability thresholds were established at levels intended to capture projects that emit at least 2 tons of NO_X and/or 2 tons of PM_{10} per year. The applicability threshold relative to the Project is 9,000 square feet.

Page 4.4-23 To incorporate corrections, as described in FEIR Section 2.4.6 (Response to Comment F-24), Table 4.4-6 Maximum Annual Construction Emissions has been updated as follows:

TABLE 4.4-6
MAXIMUM ANNUAL CONSTRUCTION EMISSIONS

	Annual Emissions (tons per year)					
Max. Rolling 12 Month Period	**ROG**	**NOx**	**CO**	**SO_x**	**PM_{10}**	**$PM_{2.5}$**
Annual Project Emissions (not including water truck-related emissions)	1.4	11.4	10.7	0.05	7.3	1.3
Water Truck Emissions	<0.1	0.6	0.3	<0.1	<0.1	<0.1
Total Annual Emissions	1.4	12.0	11.0	<0.1	7.3	1.3

Exceeds Threshold?	No	No	No	No	No	No
Significance Impact?	NA	No	NA	NA	No	NA

NOTE:
NA = not applicable.
SOURCE: Table 7 of Appendix E-1 and Appendix E-2

3.2.4 Biological Resources

Page 4.5-14 The sentence at the bottom of page 4.5-14 (and carrying to the top of page 4.5-15) includes a cross reference to a mitigation measure, which references Avian

Power Line Interaction Committee (APLIC) standards. The cross reference has been corrected as follows:

The impact of collision on Swainson's hawk and other raptors would be less than significant with adherence to the Avian Power Line Interaction Committee (APLIC) standards identified in **Mitigation Measure ~~4.5-3~~ 4.5-4**, which would minimize impacts to Swainson's hawks and other raptors during construction, operation and decommissioning. Implementation of these measures would reduce potential direct and indirect impacts from collision to Swainson's hawk and other raptors to a less-than-significant level.

Page 4.5-16 The cross reference to mitigation measures, which references Avian Power Line Interaction Committee (APLIC) standards has been corrected. The cross reference has been revised as follows:

Swainson's Hawk, Burrowing Owl and other Raptors

Risk factors typically associated with avian collisions with man-made structures include size of facility, height of structures, and specific attributes of structures (guy wires and lighting/light attraction), as well as siting in high risk areas, frequency of inclement weather, type of development and species or taxa at potential risk. The role of these risk factors has been outlined in the U.S. Fish and Wildlife Service draft guidelines for wind turbines (USFWS 2012) and communication towers (USFWS 2013), as well as by various publications in the peer reviewed literature (Gehring *et al*. 2009 and 2011; Kerlinger *et al*. 2010). Such collisions can result in injury or mortality, including, in the case of powerlines, from electrocution. These impacts would be significant. Adherence to the current APLIC design standards for overhead powerlines as stated in **Mitigation Measure ~~4.5-3~~ 4.5-4** would minimize mortality and injury from powerlines to raptors during construction, operation and decommissioning.

`

Other special-status birds and bats

Like raptors, smaller migratory birds, including special-status birds and bats may experience collision risk from powerlines. Implementation of APLIC standards in **Mitigation Measure ~~4.5-3~~ 4.5-4** would reduce these impacts to a less-than-significant level. In addition, migratory birds may be affected by collisions with solar panel infrastructure during operation and maintenance. Ongoing monitoring data from solar projects suggest that a variety of birds may be susceptible to collisions with panels.

Page 4.5-17 Mitigation measures have been updated to incorporate edits suggested by CDFW.

Mitigation Measure 4.5-1 has been updated as follows:

Mitigation Measure 4.5-1: Protection of Special-Status Species During Construction

Preconstruction surveys shall be conducted by a qualified biologist for the presence of San Joaquin kit fox and burrowing owl within 14 days prior to commencement of construction activities pursuant to the USFWS (2011) *Standardized Recommendations*

for Protection of the Endangered San Joaquin Kit Fox and CDFW (2012) staff report for burrowing owl Staff Report on Burrowing Owl Mitigation. The surveys shall be conducted in areas of suitable habitat for San Joaquin kit fox and burrowing owl. Areas that have been disked or cultivated within 12 months prior to the start of ground-disturbing activities are not considered suitable. Surveys need not be conducted for all areas of suitable habitat at one time; they may be phased so that surveys occur within 14 days prior to disturbance within active portions of the site. If no potential San Joaquin kit fox dens or burrowing owl burrows are identified, no further mitigation is required. If potential kit fox dens are observed and avoidance is determined to be feasible (as defined in CEQA Guidelines §15364 consistent with the USFWS [2011] *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox*) by a qualified biologist in consultation with the Project owner and the County, buffer distances shall be established prior to construction activities. If potential burrowing owl burrows are observed and avoidance is determined to be feasible (as defined in the CDFW 2012 staff report on burrowing owl) by a qualified biologist in consultation with the Project owner and the County, an exclusion plan will be developed with minimum buffer distances prior to construction activities.

~~If avoidance of the potential dens or burrows is not feasible, the following measures shall be implemented to avoid potential adverse effects to the San Joaquin kit fox and/or burrowing owl:~~

~~If the qualified biologist determines that potential dens or burrows are inactive, the biologist shall excavate these dens by hand with a shovel to prevent foxes or owls from using them during construction.~~

~~If the qualified biologist determines that a potential non-natal kit fox den may be active, an on-site passive relocation program shall be implemented with prior approval from the USFWS. This program shall consist of excluding San Joaquin kit foxes from occupied burrows by installation of one-way doors at burrow entrances, monitoring of the burrow for 72 hours to confirm usage has been discontinued, and excavation and collapse of the burrow to prevent reoccupation. After the qualified biologist determines that the San Joaquin kit foxes have stopped using active dens within the Project boundary, the dens shall be hand-excavated, as stated above for inactive dens. A similar exclusion methodology shall be used for burrowing owl exclusion, as described in the CDFW (2012) staff report on burrowing owl.~~

- If kit fox are detected within the Project site and avoidance is not feasible, the Project owner shall initiate consultation with CDFW to discuss how to avoid take or, if avoidance is not feasible, to acquire an Incidental Take Permit (ITP) pursuant to federal Endangered Species Act Section 7 and California Fish and Game Code section 2081(b), prior to initiating or resuming ground-disturbing activities.
- In the event an active burrowing owl den is documented on the Project site and avoidance following the no-disturbance buffer recommendations outlined in the "Staff Report on Burrowing Owl Mitigation" (CDFG 2012) guidance document is not feasible, the Project owner shall consult with CDFW for guidance on take avoidance and minimization of harm to this species.

Page 4.5-20 Revised to update the timing of nesting bird season, consistent with CDFW recommendations. The mitigation measure is revised as follows:

Mitigation Measure 4.5-3: Swainson's Hawk Nest Avoidance

For Swainson's hawk, preconstruction activity surveys shall be conducted for Swainson's hawk nests in accordance with the Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000). Timing and the number of phases of surveys can be adjusted based on the timing of the construction schedule. The surveys may be phased to coincide with active construction areas plus a 0.5-mile buffer of those areas.

If an active Swainson's hawk nest is discovered during the nesting season (~~March~~ February 1 through September 15) within 0.5 mile of active construction, a qualified biologist should complete an assessment of the potential for current construction activities to impact the nest. The assessment would consider the type of construction activities (e.g., noise levels and duration), the location of construction relative to the nest and pre-existing disturbance levels (e.g., construction activities in historically agricultural land versus activities in non-agricultural land), the visibility of construction activities from the nest location (e.g., topography or vegetation that could block line-of-sight to the nest), the number of construction personnel required to perform activities within the setback, and other existing disturbances in the area that are not related to construction activities of this project. Based on this assessment, the biologist will determine if construction activities can proceed and the level of nest monitoring required. When conducting the assessment, the biologist will consider the following levels of construction activity, with higher levels of activity requiring greater caution in determining setbacks:

- Light construction activity such as fence installation and limited vehicle access. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels in closer proximity to the occupied nests.
- Moderate and/or isolated construction activity such as grading and construction of substation, substation-access road, inverter skids, and manual installation of solar panels. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels beyond a moderate distance from the occupied nests.

Heavy construction activity across a large area of the Project and/or using louder equipment such as pile drivers, concrete saws, or jackhammers. Noise levels for this type of activity will depend on location of the activities relative to the nest and allowing these activities within the 0.5-mile setback would require coordination with CDFW.

Page 4.5-21 To incorporate recommendations of CDFW with respect to the timing of preconstruction surveys, bird nesting season, and suitable buffers, Mitigation Measure 4.5-4 is revised as follows:

Mitigation Measure 4.5-4: Protection of Migratory Birds and Other Raptors

If construction or decommissioning is scheduled to commence outside of nesting season (September ~~1~~16 to January 31), no preconstruction surveys or additional measures are required for nesting birds, including raptors. During the nesting bird breeding season (February 1 to ~~August 31~~September 15), to avoid impacts to nesting birds in the Project site and immediate vicinity, a qualified biologist shall conduct preconstruction surveys of

all potential nesting habitat within the Project site where vegetation removal or ground disturbance is planned. The survey shall be performed within the site and also include potential nest sites within 300 feet of the site in areas where access to neighboring properties is available or visible using a spotting scope. Surveys shall be conducted no more than ~~14~~10 days prior to construction or decommissioning activities. If construction is halted for ~~14~~10 days or more, the area shall be re-surveyed prior to re-initiating work.

Surveys may be phased to occur shortly before a portion of the Project site is disturbed. The surveying biologist must be qualified to determine the status and stage of nesting by migratory birds and all locally breeding raptor species without causing intrusive disturbance. If active nests are found, a suitable buffer (~~e.g.,~~ generally 300-500 feet for common raptors; ~~100~~250 feet for passerines, to be determined in the field by a qualified biologist) shall be established around active nests by a qualified biologist and no construction within the buffer allowed until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). Encroachment into the buffer may occur at the discretion of a qualified biologist in coordination with CDFW. The avoidance buffer will remain in place until the biologist has determined that the young are no longer reliant on the adults or the nest, or if breeding attempts have otherwise been unsuccessful.

To minimize the potential for avian injury and mortality from collision and electrocution, the Project will adhere to current Avian Power Line Interaction Committee (APLIC) design standards for overhead powerlines and associated structures, including use of avian-safe line designs, and installation of devices to make powerlines visible to birds (APLIC 2006, 2012).

3.2.5 Hydrology and Water Quality

Page 4.11-13 Impact 4.11-1 is revised to correct a cross reference to the Project Description's Applicant proposed commitments related to erosion control and water quality. The revised text in paragraph 3 (final sentence on page 4.11-13) is as follows:

See Section ~~2.5.8.1~~ 2.9.1, *Erosion Control and Water Quality*, in the Project Description, which describes this Applicant-proposed commitment.

Page 4.11-14 Impact 4.11-1 is revised to correct a cross reference to Applicant-proposed commitments related to erosion control and water quality. The revised text in the operations and maintenance discussion (paragraph 2 final sentence) is as follows:

See Section ~~2.8~~2.9.1, *Erosion Control and Water Quality*, in the Project Description, which describes these Applicant-proposed commitments.

3.2.6 Noise

Page 4.14-17 To include a performance standard and clarify timing for the construction noise mitigation, Impact 4.14-1 discussion has been updated. Mitigation Measure 4.14-1 is revised, as follows:

Mitigation Measure 4.14-1: Noise Reduction for Construction Activities

At least 30 days prior ~~Prior~~ to conducting nighttime construction activities ~~issuance of construction permits~~ for the proposed project, the Project Owner shall submit to the County for approval a Construction Noise Reduction Plan to be implemented by all contractors as a condition of contract. Contents of the Plan should include at a minimum:

- Maintain all construction tools and equipment in good operating order according to manufacturers' specifications;
- Limit use of major excavating, pile driving, and earth-moving machinery to daytime hours;
- Equip any internal combustion engine used for any purpose on the job or related to the job with a properly operating muffler that is free from rust, holes, and leaks;
- For construction devices that utilize internal combustion engines, ensure the engine's housing doors are kept closed, and install noise-insulating material mounted on the engine housing consistent with manufacturers' guidelines, if possible;
- Limit possible evening and nighttime shift work to the southern and/or western portions of the Project site conducting low noise activities such as welding, wire pulling, and other similar activities, together with appropriate material handling equipment; and
- Utilize a Complaint Resolution Procedure to address any noise complaints received from residents.
- The Plan shall include documentation that quantifies and substantiates how the contents of the Plan shall ensure that any nighttime construction noise levels would not exceed the Fresno County exterior noise standard of 45 dBA Leq at the closest residences.

3.2.7 Transportation

Page 4.18-13 In coordination with the County Roads Department, County Planning staff have determined that it is desirable to substitute the requirements of Mitigation Measure 4.18-3: Road Repair Agreement with more practicable, workable and equally effective requirements. The substitute mitigation measure is as follows:

Mitigation Measure 4.18-3: Road Repair Agreement

After final delivery of main equipment and prior to the later to occur of (a) the closing of the final phase III permit or (b) the start of operations of phase III of the Project, other than testing processes of the facilities, the Applicant shall crack seal & chip seal Manning Avenue between Derrick Avenue and the San Mateo Avenue Alignment. Prior to the chip

seal application, in locations where the construction entrances are directly across from each other along Manning Avenue, the area of Manning Avenue between the construction entrances shall be grinded to a depth of 0.3 feet and replaced with hot mixed asphalt.

~~Prior to the start of construction, the Project owner shall enter into a secured agreement with the County to ensure that the Project contributes its fair-share portion toward repairs of County roads that are demonstrably damaged by this Project including but not limited to West Manning Avenue and West Adams Avenue, between SR 33 and the Project driveways, and South Monterey Avenue. Subject to the discretion of the County of Fresno and Caltrans District 6, roadway impacts shall be mitigated either by construction of an overlay, reconstruction of the pavement section, or by participating financially for the costs of the mitigation to the extent of the Project's fair share (Fresno County 2018).~~

Significance after Mitigation: Less than Significant.

ON .....

NOTICE OF AVAILABILITY
DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE SONRISA SOLAR PROJECT
STATE CLEARINGHOUSE NO. 2020110008; FRESNO COUNTY EIR NO. 7869
LEAD AGENCY: Fresno County
PROJECT TITLE: Sonrisa Solar Project Draft Environmental Impact Report
PROJECT LOCATION: The Project site is in unincorporated Fresno County, bounded by State Route 33 to the west, West Manning Avenue to the south, South Merced Avenue to the east, and West Adams Avenue to the north. West South Avenue bisects the site from east to west. Nearby communities include Tranquillity (7 miles east), Mendota (8 miles north), and San Joaquin (9 miles east). The Project site is approximately 2,000 acres and comprises 33 Fresno County Assessor Parcel Numbers (listed below) Twenty parcels would be developed with photovoltaic solar, 12 parcels would be associated with the interconnection and transmission line, and one parcel would be used for the substation and interconnection (shared with the Scarlet Solar facility). 028-071-15, 028-071-36, 028-071-02, 028-071-33, 028-071-35, 028-071-40, 028-071-41, 028-071-43, 028-071-44, 028-071-45, 028-071-55, 028-071-20, 028-071-07, 028-071-17, 028-071-16, 028-071-21, 028-071-06, 028-071-01, 028-071-04, 028-071-13, 028-101-74, 028-101-72, 028-071-39, 028-111-01, 028-111-07, 028-111-10, 028-111-13, 028-111-14, 028-111-15, 028-111-16, 028-111-17, 028-111-19, 028-071-47
PROJECT DESCRIPTION: EDP Renewables CA Solar Park VI, LLC applied to the Fresno County Department of Public Works and Planning for Unclassified Conditional Use Permit No. 3677 to construct, operate, maintain, and decommission an approximately 200-megawatt alternating current (MWac) solar photovoltaic (PV) energy generation facility, 184 MWac energy storage system, and related facilities and infrastructure, known as the Sonrisa Solar Project. The Project would extend (by approximately 0.2 mile) and share use of an existing 3.3-mile long 230 kilovolt (kV) transmission line to PG&E's existing Tranquillity Switching Station. In addition to the shared use of the transmission line and switching station, which is being considered as part of the Scarlet Solar EIR (State Clearinghouse No. 2018091022, Fresno County EIR No. 7230), the Project would share other facilities with Scarlet Solar, including an electrical substation and operation and maintenance building. The Project is expected to be decommissioned after a 35-year permit term.
SIGNIFICANT ENVIRONMENTAL EFFECTS: The County has prepared a Draft Environmental Impact Report analyzing the environmental effects of the Project. No significant and unavoidable impacts would result. The Project would have a potential significant impact that could be mitigated to a less-than-significant level in the following areas: Biological Resources, Cultural and Tribal Cultural Resources, Paleontological Resources, Noise, and Transportation.
PUBLIC REVIEW PERIOD/STATUS: The 45-day review and comment period for the Draft EIR begins July 3, 2024 and ends at 5 p.m. August 19, 2024. Comments should reference EIR No. 7869, Sonrisa Solar Project. Include your name, address, and phone number or email address so we may contact you for clarification, if needed. Send written comments to:
Fresno County Department of Public Works and Planning
Development Services and Capital Projects Division
ATTN: Jeremy Shaw
2220 Tulare Street, Sixth Floor
Fresno, CA 93721
Email: jshaw@FresnoCountyCA.gov
AVAILABILITY OF THE DRAFT EIR: Copies of the Draft EIR are available for review at the following locations:
Fresno County Public Works and Planning Department, 2220 Tulare Street, Fresno, CA; Fresno County Main Library, Reference Department, 2420 Mariposa Street, Fresno, CA; Fresno County Mendota Branch Library, 1246 Belmont Avenue,

Mendota, CA; andFresno County website: http://www.co.fresno.ca.us/EIR

NO Public Comment Meeting: Public comments may be restricted to written communication. No public meeting is scheduled to receive oral comments on the Draft EIR. Please submit input in writing. Future public meetings about the EIR and the Project will be separately noticed.

Public Scoping Meeting

The CEQA process encourages comments and questions from the public throughout the planning process. Consistent with the California Public Resources Code and Section 15083(c)(1), (2)(A) to (D) of the CEQA Guidelines, a Public Scoping Meeting will be held to solicit public and agency comments on the scope and content of the Draft EIR. Oral and/or written comments also may be presented at the Public Scoping Meeting. The Public Scoping Meeting will be held online on:

Date: Tuesday, November 17, 2020
Time: 6 p.m.
Link: http://bit.ly/Sonrisascopingmeeting or call-in: US: 888 788 0099 (Toll Free), Webinar ID: 886 7912 6870

Comments in response to this NOP will be accepted through 5 p.m., Wednesday, December 2, 2020, and may be submitted by mail or email to the addresses below:

Please send your written comments to:

Good afternoon:

You are receiving the attached notice of the availability of the Draft Environmental Impact Report (EIR) for the Sonrisa Solar Project (SCH# 2020110008; Fresno County EIR No. 7869) because your email address is included on a project-specific distribution list for this project. The Sonrisa Solar Project Draft EIR is accessible on the County's website: https://www.fresnocountyca.gov/Departments/Public-Works-and-Planning/divisions-of-public-works-and-planning/development-services-division/planning-and-land-use/environmental-impact-reports/sonrisa-solar-project

No public meeting is scheduled to receive oral comments on the Draft EIR. Please submit input in writing on or before 5 p.m. August 19, 2024. Future public meetings about the EIR and the project will be separately noticed.

Best regards,
Jeremy Shaw

Mitigation Monitoring and Reporting Program

EXHIBIT 1
MITIGATION MONITORING AND REPORTING PROGRAM

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
General: Applicable to Multiple Issue Areas				
Compliance with Applicable Laws and Standards	**Applicant Proposed Measure (DEIR §2.9.4), Compliance with Applicable Laws and Standards:** The Applicant shall comply with all applicable laws and standards, including, but not limited to, those governing the use, storage, and disposal of hazardous materials; worker training and safe work practices; air quality (such as the San Joaquin Valley Air Pollution Control District's indirect source rule and fugitive dust regulation); water quality; and energy storage systems more generally. Compliance with these requirements would avoid or reduce potential adverse environmental impacts to soil, air quality, surface water and groundwater quality, human health, fire-related risk, and other environmental considerations.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	During all phases of the Project.
Aesthetics				
Glare and Lighting	**Applicant Proposed Measure (DEIR §2.9.2), Solar Technology – Glare and Lighting:** The Project shall use solar panels that have a low profile (no more than 9 feet high at the highest point during the day) to minimize visual impacts. Solar panels are designed to be anti-reflective. Nighttime exterior lighting impacts shall be minimized by the use of manually controlled lights. All exterior lighting shall be shielded and directed downward to minimize the potential for glare or spillover onto adjacent properties.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	During all phases of the Project.
Biological Resources				
Pest Control, Noxious Weeds	**Applicant Proposed Measure (DEIR §2.9.3), Pest Control:** The Applicant shall implement an Integrated Pest Management Plan to prevent noxious weeds from invading onto immediately adjacent agricultural lands, protect special status and other biological resources surrounding the Project site from the potential for harmful effects of noxious weeds that could result from Project activities, avoid unintended harm from noxious weed management techniques, and manage potential pest populations. A plan for noxious weed control is provided in DEIR Appendix B-2, *Weed Control Plan*. A plan for rodent control is provided in DEIR Appendix B-3, *Rodent Control Plan*.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	During all phases of the Project.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1: Project construction and decommissioning could have a substantial adverse direct or indirect impact on special-status species.	**Mitigation Measure 4.5-1: Protection of Special-Status Species During Construction.** Preconstruction surveys shall be conducted by a qualified biologist for the presence of San Joaquin kit fox and burrowing owl within 14 days prior to commencement of construction activities pursuant to the USFWS (2011) *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox* and CDFW (2012) staff report for burrowing owl Staff Report on Burrowing Owl Mitigation. The surveys shall be conducted in areas of suitable habitat for San Joaquin kit fox and burrowing owl. Areas that have been disked or cultivated within 12 months prior to the start of ground-disturbing activities are not considered suitable. Surveys need not be conducted for all areas of suitable habitat at one time; they may be phased so that surveys occur within 14 days prior to disturbance within active portions of the site. If no potential San Joaquin kit fox dens or burrowing owl burrows are identified, no further mitigation is required. If potential kit fox dens are observed and avoidance is determined to be feasible (as defined in CEQA Guidelines §15364 consistent with the USFWS [2011] *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox*) by a qualified biologist in consultation with the Project owner and the County, buffer distances shall be established prior to construction activities. If potential burrowing owl burrows are observed and avoidance is determined to be feasible (as defined in the CDFW 2012 staff report on burrowing owl) by a qualified biologist in consultation with the Project owner and the County, an exclusion plan will be developed with minimum buffer distances prior to construction activities. • If kit fox are detected within the Project site and avoidance is not feasible, the Project owner shall initiate consultation with CDFW to discuss how to avoid take or, if avoidance is not feasible, to acquire an Incidental Take Permit (ITP) pursuant to federal Endangered Species Act Section 7 and California Fish and Game Code section 2081(b), prior to initiating or resuming ground-disturbing activities. • In the event an active burrowing owl den is documented on the Project site and avoidance following the no-disturbance buffer recommendations outlined in the "Staff Report on Burrowing Owl Mitigation" (CDFG 2012) guidance document is not feasible, the Project owner shall consult with CDFW for guidance on take avoidance and minimization of harm to this species.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Surveys to occur within 10 days prior to construction. Buffer distances and avoidance measures to be implemented prior to construction if necessary.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1 (cont.)	**Mitigation Measure 4.5-2: Worker Environmental Awareness Training and Best Management Practices for Biological Resources.** During construction, operation and maintenance, and decommissioning of the facility, the Project owner and/or contractor shall implement the following general avoidance and protective measures to protect San Joaquin kit fox, burrowing owl, Swainson's hawk, and other special-status wildlife species: • Prior to the initiation of ground disturbing activities and for the duration of construction and decommissioning activities, the Project owner, or its contractor, shall implement a Worker Environmental Awareness Program (WEAP) to train construction and decommissioning personnel how to recognize and protect biological resources on the Project site. The WEAP training shall be conducted by a qualified biologist. Personnel shall sign a form provided by the trainer documenting their attendance and comprehension of the training. New personnel shall also be trained prior to joining existing work crews as the construction and/or decommissioning proceeds. The WEAP training shall include a review of the special-status species and other sensitive biological resources that could exist in the Project area, the locations of sensitive biological resources and their legal status and protections, and measures to be implemented for avoidance of these sensitive resources, highlighting the birds protected under the California Fish and Game Code and nesting birds protected under the MBTA; San Joaquin kit fox; burrowing owl; and Swainson's hawk. The WEAP training shall indicate the appropriate steps to be taken if a special-status species is observed, which may include work stoppage and coordination with the CDFW and USFWS. • To prevent inadvertent entrapment of wildlife during construction, all excavated, steep-walled holes or trenches with a 2-foot or greater depth shall be covered with plywood or similar materials at the close of each working day, or provided with one or more escape ramps constructed of earth fill or wooden planks. Before such holes or trenches are filled, they shall be thoroughly inspected by construction personnel for trapped animals. If trapped animals are observed, escape ramps or structures shall be installed immediately to allow escape. If a special-status species is trapped, the USFWS and/or CDFW shall be contacted immediately.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Protection measures to be implemented during all project phases; WEAP training to occur prior to construction and decommissioning and repeated as necessary to train new personnel.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1 (cont.)	• All construction pipes, culverts, or similar structures with a 4-inch or greater diameter that are stored at a construction site for one or more overnight periods shall be thoroughly inspected by construction personnel for special-status wildlife or nesting birds before the pipe is subsequently buried, capped, or otherwise used or moved in any way. If an animal is discovered inside a pipe, that section of pipe shall not be moved until a qualified biologist has been consulted and the animal has either moved from the structure on its own accord or until the animal has been captured and relocated by the qualified biologist. Any vertical tubes (e.g., solar mount poles, chain link fencing poles, or any other hollow tubes or poles) used on the Project site shall be capped immediately after installation to avoid entrapment of birds. • Vehicles and equipment parked on the site shall have the ground beneath the vehicle or equipment inspected by construction personnel for the presence of wildlife prior to moving. • Vehicular traffic shall use existing routes of travel. Cross-country vehicle and equipment use outside of the Project properties shall be prohibited. • A speed limit of 20 miles per hour shall be enforced within all construction areas. • No work shall be conducted after sunset. • A long-term trash abatement program shall be established for construction, operation, and decommissioning and submitted to the County. Trash and food items shall be contained in closed containers and removed daily to reduce the attractiveness to wildlife such as common raven (Corvus corax), coyote (Canis latrans), and feral dogs. • Prior to the use of rodenticides as part of any rodent control program during construction, operation, or decommissioning, a rodent control plan shall be developed by the Project owner in coordination with a biologist familiar with special-status species (e.g. San Joaquin kit fox, Swainson's hawk) that occur in the area and could be adversely affected by the use of rodenticides. The plan shall include goals and objectives of rodent control, including that rodent control will only be implemented in focused locations where rodent populations have exceeded acceptable levels and the types of rodent control methods, and shall include pre-use coordination with Fresno County Agricultural Commissioner for recommendation of select rodenticides or other control programs. The rodent control program shall be developed in consultation with			

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1 (cont.)	• a qualified biologist and the Project owner to ensure that methods proposed to control rodents do not impact non-target species. For any rodenticide approved for rodent control, the product label shall be thoroughly examined prior to application to verify if any restrictions exist for application of the product within the range of the San Joaquin kit fox or other endangered or protected animals. Pellet bait rodenticide will be prohibited from use in areas accessible to San Joaquin kit fox. • Workers shall be prohibited from bringing pets (excluding service animals) to the Project site and from feeding wildlife in the vicinity. • No firearms shall be allowed on the Project site during construction, operation, or decommissioning. • Intentional killing or collection of any wildlife species shall be prohibited. • Fencing of the Solar Facility Project site shall incorporate wildlife-friendly fencing design. Fencing plans may use one of several potential designs that would allow kit foxes to pass through the fence while still providing for Project security and exclusion of other unwanted species (e.g., domestic dogs and coyotes). Raised fences or fences with entry/exit points of at least 6 inches in diameter spaced along the bottom of the fence to allow species such as San Joaquin kit fox access into and through the Project site would be appropriate designs.			
	Mitigation Measure 4.5-3: Swainson's Hawk Nest Avoidance. For Swainson's hawk, preconstruction activity surveys shall be conducted for Swainson's hawk nests in accordance with the Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Swainson's Hawk Technical Advisory Committee 2000). Timing and the number of phases of surveys can be adjusted based on the timing of the construction schedule. The surveys may be phased to coincide with active construction areas plus a 0.5-mile buffer of those areas. If an active Swainson's hawk nest is discovered during the nesting season (February 1 through September 15) within 0.5 mile of active construction, a qualified biologist should complete an assessment of the potential for current construction activities to impact the nest. The assessment would consider the type of construction activities (e.g., noise levels and duration), the location of construction relative to the nest and pre-existing disturbance levels (e.g., construction activities in historically agricultural land versus activities in non-agricultural land), the visibility of construction activities from the nest location	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Preconstruction surveys to be conducted prior to construction or decommissioning activities as described. Measures to be implemented and buffers observed during construction and decommissioning.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1 (cont.)	(e.g., topography or vegetation that could block line-of-sight to the nest), the number of construction personnel required to perform activities within the setback, and other existing disturbances in the area that are not related to construction activities of this project. Based on this assessment, the biologist will determine if construction activities can proceed and the level of nest monitoring required. When conducting the assessment, the biologist will consider the following levels of construction activity, with higher levels of activity requiring greater caution in determining setbacks: • Light construction activity such as fence installation and limited vehicle access. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels in closer proximity to the occupied nests. • Moderate and/or isolated construction activity such as grading and construction of substation, substation-access road, inverter skids, and manual installation of solar panels. Noise levels generated by these construction activities would likely be similar to existing ambient noise levels beyond a moderate distance from the occupied nests. • Heavy construction activity across a large area of the Project and/or using louder equipment such as pile drivers, concrete saws, or jackhammers. Noise levels for this type of activity will depend on location of the activities relative to the nest and allowing these activities within the 0.5-mile setback would require coordination with CDFW. In the event the assessment determines that construction activities could occur closer than 0.5 miles to an active nest, in no event would construction activities occur within 500 feet of an active nest without approval from CDFW. Full-time monitoring to evaluate the effects of construction activities on nesting Swainson's hawks would be required where activity occurs closer than 0.5 miles. The qualified biologist shall have the authority to stop work if it is determined that project construction is disturbing nesting activities. These buffers may need to increase depending on the sensitivity of the nesting Swainson's hawk to disturbances and at the discretion of the qualified biologist. No avoidance would be needed if construction occurs near a known Swainson's hawk nest outside of the Swainson's hawk nesting season. In the event take cannot be avoided, the proponent shall confer with CDFW on the need for an incidental take permit and will comply with any specific-specific minimization and avoidance measures identified in the issued incidental take permit prior to the removal of active nest trees.			

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1 (cont.)	**Mitigation Measure 4.5-4: Protection of Migratory Birds and Other Raptors** If construction or decommissioning is scheduled to commence outside of nesting season (September 16 to January 31), no preconstruction surveys or additional measures are required for nesting birds, including raptors. During the nesting bird breeding season (February 1 to September 15), to avoid impacts to nesting birds in the Project site and immediate vicinity, a qualified biologist shall conduct preconstruction surveys of all potential nesting habitat within the Project site where vegetation removal or ground disturbance is planned. The survey shall be performed within the site and also include potential nest sites within 300 feet of the site in areas where access to neighboring properties is available or visible using a spotting scope. Surveys shall be conducted no more than 10 days prior to construction or decommissioning activities. If construction is halted for 10 days or more, the area shall be re-surveyed prior to re-initiating work. Surveys may be phased to occur shortly before a portion of the Project site is disturbed. The surveying biologist must be qualified to determine the status and stage of nesting by migratory birds and all locally breeding raptor species without causing intrusive disturbance. If active nests are found, a suitable buffer (generally 300-500 feet for common raptors; 250 feet for passerines, to be determined in the field by a qualified biologist) shall be established around active nests by a qualified biologist and no construction within the buffer allowed until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). Encroachment into the buffer may occur at the discretion of a qualified biologist in coordination with CDFW. The avoidance buffer will remain in place until the biologist has determined that the young are no longer reliant on the adults or the nest, or if breeding attempts have otherwise been unsuccessful. To minimize the potential for avian injury and mortality from collision and electrocution, the Project will adhere to current Avian Power Line Interaction Committee (APLIC) design standards for overhead powerlines and associated structures, including use of avian-safe line designs, and installation of devices to make powerlines visible to birds (APLIC 2006, 2012).	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Surveys to be conducted within 10 days (prior to) construction and decommissioning activities (if scheduled during nesting season); and if activities are halted for 10 days or more, the area should be resurveyed prior to commencing work.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-1 (cont.)	**Mitigation Measure 4.5-5: Protection of Bats.** No earlier than 30 days prior to any construction or decommissioning ground disturbance, a qualified bat biologist shall conduct a pre-construction survey for roosting bats in trees to be removed or pruned and structures to be dismantled. Preconstruction surveys for roosting bats shall be conducted during the maternity season (March 1-July 31) for any construction or decommissioning ground disturbance that occurs within 300 feet of habitat capable of supporting bat nursery colonies. A minimum of one (1) day and one (1) evening visit shall take place. If no roosting bats are found, no further action is required. If a bat roost is found, the following measures shall be implemented to avoid impacts on roosting bats. If active maternity roosts are found in trees or structures that shall be removed as part of construction or decommissioning, tree removal or dismantling of that structure shall commence before maternity colonies form (generally before March 1) or after young are flying (generally by July 31). Active maternal roosts shall not be disturbed. If a non-maternal roost of bats is found in a tree or structure to be removed as part of construction or decommissioning, the individuals shall be safely evicted, under the direction of a qualified bat biologist and with approval from CDFW. Removal of the tree or dismantling of the structure should occur no sooner than two nights after the initial minor site modification (to alter airflow), under guidance of the qualified bat biologist. The modifications shall alter the bat habitat, causing bats to seek shelter elsewhere after they emerge for the night. On the following day, the tree or structure may be removed, in presence of the bat biologist. If any bat habitat is not removed, departure of bats from the construction area shall be confirmed with a follow-up survey prior to start of construction.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Survey to be conducted within 30 days of construction and decommissioning ground disturbance.
Impact 4.5-2: Project operation could have a substantial adverse direct or indirect impact on special-status species.	Implement Mitigation Measure 4.5-4. See Impact 4.5-1 row, above, for text of the mitigation measure.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Preconstruction surveys to be conducted prior to construction or decommissioning activities as described. Measures to be implemented and buffers observed during construction and decommissioning.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Biological Resources (cont.)				
Impact 4.5-4: Construction could conflict with local policies or ordinances protecting biological resources.	Implement Mitigation Measures 4.5-1 through 4.5-4. See Impact 4.5-1 row, above, for text of the mitigation measures.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	See Impact 4.5-1 row, above.
Cultural Resources				
Impact 4.6-1: Ground disturbing activities associated with the Project could cause a substantial adverse change in the significance of a newly-discovered historical or archaeological resource, as defined in CEQA Guidelines Section 15064.5.	**Mitigation Measure 4.6-1: Cultural Resources Awareness Training.** The Project owner shall retain a qualified archaeologist to carry out all mitigation measures related to archaeological and historical resources. Prior to the start of any ground-disturbing activities, the Project owner shall ensure that the qualified archaeologist has conducted a Cultural Resources Awareness Training for all construction personnel working on the Project. The training shall include an overview of potential cultural resources that could be encountered during ground disturbing activities to facilitate worker recognition, avoidance, and subsequent immediate notification to the qualified archaeologist for further evaluation and action, as appropriate; and penalties for unauthorized artifact collecting or intentional disturbance of archaeological resources. A sign-in sheet shall be completed, retained by the Project construction contractor for the duration of Project construction to demonstrate attendance at the awareness training, and provided to the County upon the completion of Project construction.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Cultural Resources Awareness Training to be conducted prior to and during construction. Work to be conducted consistent with training during construction.
	Mitigation Measure 4.6-2: Inadvertent Discovery of Cultural Resources. In the event archaeological materials are encountered during Project activities, the designated Project construction contractor shall immediately cease any ground disturbing activities within 100 feet of the find. The qualified archaeologist (and a Native American-designated representative if the resource is Native American-related) shall evaluate the significance of the resources for California Register of Historical Resources eligibility and recommend appropriate treatment measures to the County and the Project Owner. Per CEQA Guidelines Section 15126.4(b)(3)(C), if it is demonstrated that resources cannot be avoided, the qualified archaeologist shall (in coordination with a Native American-designated representative if the resource is Native American-related) develop additional treatment measures in consultation with the County, which may include data recovery or other appropriate measures. The County shall consult with appropriate Native American representatives in determining appropriate treatment for	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	During ground disturbing construction and decommissioning activities.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Cultural Resources (cont.)				
Impact 4.6-1 (cont.)	unearthed cultural resources if the resources are prehistoric, tribal cultural resources, or Native American in nature. The qualified archaeologist shall prepare a report documenting evaluation and/or additional treatment of the resource. A copy of the report shall be provided to the County and to the Southern San Joaquin Valley Information Center. Construction can recommence based on direction of the qualified archaeologist with the County's agreement.			
Impact 4.6-2: Ground disturbing activities associated with the Project could result in damage to previously unidentified human remains.	Implement Mitigation Measures 4.6-1 and 4.6-2. See Impact 4.6-1 row, above, for text of the mitigation measures.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Cultural Resources Awareness Training to be conducted prior to and during construction. Work to be conducted consistent with training during construction. Discovery procedures to be implemented during ground disturbing construction and decommissioning activities.
	Mitigation Measure 4.6-3: Inadvertent Discovery of Human Remains. If human remains are uncovered during Project activities, the Project owner shall immediately halt work, contact the Fresno County Coroner to evaluate the remains, and follow the procedures and protocols set forth in CEQA Guidelines Section 15064.55(e)(1). If the County Coroner determines that the remains are Native American in origin, the Native American Heritage Commission (NAHC) will be notified, in accordance with Health and Safety Code Section 7050.5(c), and Public Resources Code 5097.98 (as amended). The NAHC shall designate a Most Likely Descendant (MLD) for the remains per Public Resources Code Section 5097.98, and the Project Applicant shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices where the Native American human remains are located, is not damaged or disturbed by further activity under the landowner has discussed and conferred, as prescribed in Public Resources Code Section 5097.98, with the MLD regarding their recommendation for the disposition of the remains, taking into account the possibility of multiple human remains.			

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Cultural Resources (cont.)				
Impact 4.6-3: Ground disturbing activities associated with the Project could cause a substantial adverse change to previously unknown archaeological resources that are also tribal cultural resources, as defined in Public Resources Code Section 21074(a).	Implement Mitigation Measures 4.6-1 through 4.6-3. See Impact 4.6-1 row, above, for text of the mitigation measures.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	See rows for Impacts 4.5-1 and 4.5-2, above.
Geology, Soils, and Paleontological Resources				
Impact 4.8-7: The Project could directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.	**Mitigation Measure 4.8-1: Unanticipated Fossil Discovery.** Prior to ground disturbing activities for Project construction or decommissioning, the Project owner shall retain a qualified professional paleontologist (meeting the standards of the Society of Vertebrate Paleontology [SVP]) to develop and implement a Paleontological Worker Education and Awareness Program (WEAP). If paleontological resources are discovered during ground-disturbing activities (e.g., during Project construction or decommissioning), all earthwork or other types of ground disturbance within 50 feet of the find shall stop immediately until a qualified professional paleontologist can assess the nature and importance of the find. Based on the scientific value or uniqueness of the find, the paleontologist may record the find and allow work to continue or recommend salvage and recovery of the fossil. The paleontologist may also propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with the standards of the SVP that are current as of the discovery and with currently-accepted scientific practice. The current standards of the SVP are set forth in the SVP's 2010 Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources, as prepared by the SVP's Impact Mitigation Guidelines Revision Committee. If required, treatment for fossil remains may include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and may also include preparation of a report for publication describing the finds.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Prior to and during construction and decommissioning.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Hydrology and Water Quality				
Erosion Control and Water Quality	**Applicant Proposed Measure (DEIR §2.9.1), Erosion Control and Water Quality:** The Project shall implement best management practices (BMPs) to limit runoff and control erosion during construction, as required, and in compliance with the terms stipulated by a stormwater pollution prevention plan (SWPPP) and associated conditions of the Construction General Permit (if applicable). In the absence of a nexus with waters of the United States, the Project shall limit runoff and control erosion compliance with the terms of a plan that incorporates stormwater BMPs that are substantively similar to what would be required by a SWPPP to reduce the adverse effects of erosion and sedimentation. If required by the code of federal regulations (CFR), the Project shall require preparation of a Spill Prevention, Control, and Countermeasures (SPCC) Plan under 40 CFR §112.1. If a SPCC Plan is not required by regulation, the Project shall prepare and adhere to a substantively similar plan.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	If a SPCC Plan is required, it shall be prepared at least 30 days prior to construction; otherwise measure to be implemented during construction.
Noise				
Impact 4.14-1: The Project could generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project site in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.	Mitigation Measure 4.14-1: Noise Reduction for Construction Activities. At least 30-days prior ~~Prior~~ to conducting nighttime construction activities ~~issuance of construction permits~~ for the proposed project, the Project Applicant shall submit to the County for approval a Construction Noise Reduction Plan to be implemented by all contractors as a condition of contract. Contents of the Plan should include at a minimum: • Maintain all construction tools and equipment in good operating order according to manufacturers' specifications; • Limit use of major excavating, pile driving, and earth-moving machinery to daytime hours; • Equip any internal combustion engine used for any purpose on the job or related to the job with a properly operating muffler that is free from rust, holes, and leaks; • For construction devices that use internal combustion engines, ensure the engine's housing doors are kept closed, and install noise-insulating material mounted on the engine housing consistent with manufacturers' guidelines, if possible; • Limit possible evening and nighttime shift work to the southern and/or western portions of the Project site conducting low noise activities such as welding, wire pulling, and other similar activities, together with appropriate material handling equipment; and • Utilize a Complaint Resolution Procedure to address any noise complaints received from residents.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Submit plan to County for review and approval at least 30 days prior to construction; implement plan during construction.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Noise (cont.)				
Impact 4.14-1 (cont.)	• The Plan shall include documentation that quantifies and substantiates how the contents of the Plan shall ensure that any nighttime construction noise levels would not exceed the Fresno County exterior noise standard of 45 dBA Leq at the closest residences.			
Transportation				
Impact 4.18-1: Construction of the Project would generate a temporary increase in traffic volumes on area roadways, which could conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.	**Mitigation Measure 4.18-1: Construction and Decommissioning Traffic Management Plan.** Prior to the issuance of construction or building permits and the issuance of decommissioning authorizations, the Project owner and/or its construction contractor shall prepare and submit a Traffic Management Plan to the Fresno County Public Works Department and the California Department of Transportation, District 6, as appropriate, for approval. The Traffic Management Plan must be prepared in accordance with both the California Department of Transportation Manual on Uniform Traffic Control Devices and Work Area Traffic Control Handbook and must include, but not be limited to, the following elements: • Temporary Traffic Control (TTC) plan that addresses traffic safety and control through the work zone, including during temporary lane closures (if needed) to accommodate materials delivery, transmission line stringing activities, or any other utility connections; • Identify the timing of deliveries of heavy equipment and building materials; • Requirement for designated construction staff to be assigned as flaggers to direct traffic into and/or through temporary traffic control zones, as needed; • Requirement to place temporary signage, lighting, and traffic control devices if required, including, but not limited to, appropriate signage along access routes to indicate the presence of heavy vehicles and construction traffic; • Ensure access for emergency vehicles to the Project site; • Access to adjacent properties shall be maintained; • Specify both construction/decommissioning-related vehicle travel and oversize load haul routes, minimizing construction/decommissioning traffic during the a.m. and p.m. peak hour, distributing construction/decommissioning traffic flow across alternative routes to access the Project site, and avoiding residential neighborhoods to the maximum extent feasible.	Project owner and/or its designee to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Prior to issuance of construction permits and during construction and decommissioning.

Impact	Mitigation Measure / Applicant Proposed Measure	Implementation Responsibility	Monitoring Responsibility	Timing
Transportation (cont.)				
Impact 4.18-1 (cont.)	• Requirement to obtain all necessary permits for the work within the road right of way or use of oversized/overweight vehicles that would utilize County-maintained roads, which may require California Highway Patrol or a pilot car escort. Copies of the approved traffic plan and issued permits shall be submitted to the Fresno County Divisions of Public Works and Planning. The Traffic Management Plan elements listed above would reduce the potentially significant effects of short-term and intermittent construction-related congestion caused by construction and decommissioning vehicles/equipment on local roadways.			
	Mitigation Measure 4.18-2: Preconstruction and Pre-Decommissioning Road Survey Report. Prior to Project construction and decommissioning, a preconstruction report and a pre-decommissioning report shall be prepared by a qualified registered engineer, retained by the Project owner, to include a detailed analysis of road suitability to accommodate haul trucks during Project construction and decommissioning. The report shall be submitted to the Fresno County Department of Public Works and Planning. Prior to initiating the preconstruction or decommissioning report, the proposed methodology shall be presented to the Fresno County Department of Public Works and Planning for review and approval. Improvements to existing roads, to be implemented by the Project owner, may be necessary based on the findings of the report.	Project owner and/or its designated contractor to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee to review report and provide recommendations and/or approval and monitor for implementation.	Prior to project construction and decommissioning.
	Mitigation Measure 4.18-3: Road Repair Agreement. After final delivery of main equipment and prior to the later to occur of (a) the closing of the final phase III permit or (b) the start of operations of phase III of the Project, other than testing processes of the facilities, the Applicant shall crack seal & chip seal Manning Avenue between Derrick Avenue and the San Mateo Avenue Alignment. Prior to the chip seal application, in locations where the construction entrances are directly across from each other along Manning Avenue, the area of Manning Avenue between the construction entrances shall be grinded to a depth of 0.3 feet and replaced with hot mixed asphalt.	Project owner and/or its designated contractor to implement measure as defined.	Fresno County Department of Public Works and Planning, Development Services Division, and/or its designee.	Agreement secured 15 days prior to the start of construction and terms of the agreement implemented after the conclusion of construction activities.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017*, available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017*, available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the ***location*** and ***urbanization*** selected on the project characteristic screen. These values were ***supplied by the air districts or use a default average for the state***. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8

[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examination, 2009-2011.
