**ATP 2017 AUGMENTATION**  
**APPLICATIONS**

**Biola Sidewalk** – In the community of Biola, install sidewalk along the east side of Biola Avenue from the post office to Shaw Avenue. In addition, install concrete sidewalk on “C” Street from Biola Avenue to west of the community center. The project will provide a path away from the roadways, improve pedestrian safety, and provide connectivity to the school, community center, and post office, and to the central business district at “G” Street and Biola Avenue.

**Cantua Creek Elementary School Pedestrian Paths** – Install asphalt concrete walkway and dike along Clarkson Avenue between Santa Clara and San Mateo Avenues. The lack of an all-weather walking surface forces pedestrians to travel close to the high speed road leading to the elementary school. The project will allow safe travel to the school for school travel and their Head Start and After School programs.

**Grantland Avenue Sidewalk and School Crossing Improvement**– In northwest Fresno, provide a safe pedestrian passage across Grantland Avenue to Herndon-Barstow Elementary School by installing concrete sidewalk, modifying an existing median refuge area, adding a new median refuge area, constructing a pedestrian barrier fence, and relocating the existing flashing beacons on Grantland Avenue.

**Lanare Sidewalk**– Install AC walkway and dike along Mt. Whitney Ave, Chateau Fresno Avenue, Garfield Avenue, and Grantland Avenue. This project directly benefits Lanare residents by providing safe pedestrian access to the community center, park, convenience store, and bus stop to access services outside of the community. This entire project will significantly improve the connectivity to services within Lanare, thereby encouraging active travel to these destinations.
