Scope of Work October 1, 2016 – June 30, 2017

COOPERATIVE AGREEMENT SPECIFICATIONS FOR COUNTY AGRICULTURAL COMMISSIONERS TO CONDUCT LIGHT BROWN APPLE MOTH (LBAM) DETECTION TRAPPING

Background

Light Brown Apple Moth was first discovered in the San Francisco Bay Area in the late fall of 2006. Since then, it has been detected in 28 counties, from Mendocino to San Diego. A Federal Domestic Quarantine Order (DA-2007-42) was established on May 2, 2007 that required, in addition to other actions, additional LBAM trapping to allow continued interstate movement of regulated articles. To confirm that areas of the state are free from LBAM, traps are piggybacked alongside existing detection traps.

Section 1 – The California Department of Food and Agriculture shall:

1. Provide training as needed.
2. Provide trapping materials; including traps, lures and handouts.
3. Ensure timely payment of invoices.
4. Provide quality assurance of program.

Section 2 – The County Agricultural Commissioner shall:

1. Hire and/or train personnel.
2. Ensure that trapping procedures are followed, as described in Section 3.
3. Ensure that all documentation of work is complete and accurate.
4. Submit monthly invoices no later than 30 days past the end of the month in which the invoiced activity occurred to lbaminvoices@cdfa.ca.gov. Note – payment is contingent upon receipt of trapping reports for that month. **Invoices will not be approved for payment if reports have not been submitted.**
5. Submit monthly trapping reports using the LBAM Combined Detection and Regulatory Trapping Survey Report (LBAM-Trapping-Report.xls Excel spreadsheet) by close of business the 5th day of each month. **Please submit the Report electronically to lbaminvoices@cdfa.ca.gov.**
6. Provide and maintain trapping vehicles.

7. Submit samples to the Plant Pest Diagnostics Laboratory in Sacramento via approved method(s). See Collection and Submission of Samples in the attachment, "Light Brown Apple Moth Trapping Guide." Or, if directed, submit samples directly to the LBAM project.

Section 3 – Description of Work

1. Trapping activities will be conducted by County personnel following the guidelines and direction found in the attachment, "Light Brown Apple Moth Trapping Guide."
2. Trapping is performed in conjunction with existing detection trapping routes and/or sites (piggybacked) used for other general detection species. Trap servings will be reimbursed at three-minutes per trap. These traps should be serviced and maintained by existing general detection trappers. The trapping season for your county should be the same as for general detection trapping, such as for general fruit flies. Consult the CDFA Insect Trapping Guide (https://www.cdfa.ca.gov/plant/pdep/Insect_Trapping_Guide/docs/Insect_Trapping_Guide_web.pdf) for exact months for general pest detection trapping, for example, Section CP (ChamP™ Trap), page 71.
3. Mileage reimbursement is not allowed for LBAM traps piggybacked onto general pest detection and glassy-winged sharpshooter sites. Mileage reimbursement may be allowed for associated trapping activities (attend meetings, sample submission, quality control, supervision).
4. Delimitation trapping may be allowed upon detection of "new location" finds, but only with the approval of LBAM project management.
5. Incorporate the documentation for LBAM traps into the books used for general pest detection or GWSS programs.
6. Daily Trapping Summaries (DTS) (Form 60-210) must be completed daily by each reimbursable trapper and will serve as official documentation of work performed. The DTS must be held available for review by the CDFA audits office for three years but are not turned in to the LBAM Program. To facilitate program audits, the DTS – whether completed daily, weekly, or monthly – must be signed by the individual who performed the work indicated on the summary. This applies to hand completed or electronic summaries.

Section 4 – Basis for Payment

1. Submit invoices by e-mail to: lbaminvoices@cdfa.ca.gov.
2. Payment will be made monthly, in arrears, upon receipt and approval of invoice.

3. Invoice will conform to attached sample invoice. **Reimbursement will not be made if trapping reports have not been submitted. County remittance address is required to be on the invoice (Section A. Remittance Address). Reimbursement will not be made without proper remittance address.**

All personnel salary costs shall be properly tracked or allocated to the cooperative agreement in accordance with Office of Management and Budget (OMB) requirements and Federal cost principles. Please be sure that personnel costs can be traced back to original documents detailing the account to which personnel hours are billed. In addition, all invoiced personnel costs must match the Scope of Work (work plan).

If the County plans to seek reimbursement for vehicle mileage, the documentation for mileage reimbursement shall be tracked separately from all other programs and documentation shall be available to support the reimbursement. In addition, all invoiced vehicle costs must match the Scope of Work (work plan). On a related note, mileage rates used on invoices must be the same as contained in the work plan. CDFA will send an email that will notify counties of new rates (current rate \$0.54) if the federal mileage rate changes during the term of the agreement.

Reimbursement for the amount of salaries and/or benefits for employees under this agreement cannot exceed the gross daily rate of a GS-15, Step 10, base salary for US Government employees in effect during the period in which the expense was incurred as defined in the General Pay Scale program notice posted on the Internet at <http://www.fas.usda.gov/programs/resources/general-pay-scale>.

All other expenses (travel, supplies, communications, etc.) for which the County will seek reimbursement under the cooperative agreement shall be directly related to the cost of administering and conducting the program and documentation shall be available to support the reimbursement. In addition, all invoiced expenses must match the Scope of Work (work plan).

The following citations are requirements outlined in OMB Circulars and Federal Cost Principles applicable to your agency/organization.

State, Local and Indian Tribal Governments:

- 2 CFR 225, Cost Principles (formerly OMB Circular A-87), see Cost Allocation Plans and Attachment B, 8. Compensation for personal services, h. Support of Salaries and wages.
- OMB Circular A-102, Uniform Administrative Requirements.

LIGHT BROWN APPLE MOTH TRAPPING GUIDE

PROGRAM: Light Brown Apple Moth (LBAM) Trapping, (Detection, Nursery, Cropland)

TYPE OF TRAP: Jackson Trap

The delta-shaped Jackson trap is made of plastic-coated cardboard. A sticky insert on the bottom captures moths. The pheromone septum is placed in the stickum on the trap insert. If the pheromone septum is lost due to wind or other factors, use a medfly lure basket to secure the pheromone septum.

The trap consists of four parts: trap body, insert, septum and trap hanger.

Premises or farms that are equal to or less than five acres must be trapped with a minimum of one trap. Traps should be piggybacked with GWSS locations when possible.

CROPLAND TRAP DENSITY: Federally Regulated Area - Trapping for LBAM must occur on each premises or farm in a LBAM quarantined area that ships regulated articles intrastate and interstate in areas 1.5 miles or more from a LBAM detection site. Trapping for LBAM must occur at a trapping density of one trap per square mile in cropland.

INSPECTION FREQUENCY:

Detection Trapping – Once every 14 days
Nursery and Cropland Trapping – Once every 30 days.

Delimitation Survey –

All Counties*

When a confirmed LBAM is trapped, pheromone baited Jackson traps will be placed uniformly over a four square mile area with twenty-five traps placed in each of the square miles. A total of 100 traps will be deployed. All traps should be placed within 72 hours and inspected once within the first seven days. Traps should be serviced every 14 days thereafter for a period of time equal to two generations beyond the date of the last LBAM detection. This time period is determined by a temperature-dependent developmental model maintained by the LBAM program personnel in Sacramento.

* For the counties listed below, all of the above applies with the following exception. If LBAM delimitation traps are being run for a single adult, the full array of required traps will only be maintained from April 1-Oct 31. The find site must be trapped during the full delimitation period at 14 day servicing intervals. This difference is based on LBAM biology.

HOSTS: The moth has a wide-range of unrelated hosts including: Apple, pear, peach, apricot, blackberry, raspberry, citrus, persimmon, avocado, oak, willow, walnut, poplar, cottonwood, alder, pine, and eucalyptus.

SELECTION OF TRAPPING SITES: Deploy detection and nursery traps onto any existing trapping site. Cropland traps are generally not piggybacked. Piggybacking traps in this manner will allow for rapid deployment, efficient servicing, and reduce program expenses. Ideally, the trap should be placed at least 10 feet from any existing trap. However, piggybacking traps takes priority over the 10 foot separation.

HANGING THE TRAP: Assemble the trap by first writing the trap number and date of deployment on both the trap body and the sticky insert. Trap numbers for this pest will include the identifying letters "LB" (in place of "MF", "OF", "ML", etc.). The trap body is then opened; the bottom is pushed upward and firm pressure is applied laterally. **THIS IS IMPORTANT!** When pressure is released, the trap bottom will remain flat. The sticky insert is slid into place. It will fit tightly, if properly done. Tear open the septum package and slide the lure onto the insert without touching the lure or the inside of the package with your fingers. Forceps or tweezers may be used for septum placement if necessary. The lure is placed directly onto the center of the sticky insert on its side (**DO NOT BLOCK THE OPENING OF THE SEPTUM WITH STICKUM!**).

The trap may be placed in any host tree that fits the following placement criteria – in the upper 1/3 to 1/2 of the tree canopy, and 1/3 to 2/3 the distance from the trunk to the outer edge of the foliage. The presence or absence of ripe fruit is not a factor in hanging the trap. Shade is not as critical for this trap as for the fly traps.

TRAP INSPECTION AND SERVICING: When inspecting traps, the following steps should be taken:

1. Remove the trap from the tree.
2. Pull out insert and examine entire area of stickum.
3. Remove leaves and debris from stickum as moths could be beneath these objects. Be certain that the sticky surface is not rendered less effective by dust or debris. The stickum must remain optimally sticky to capture moths.
4. If no moths are found, replace insert, date trap, and rebait, if necessary, according to the recommended baiting interval and suggested handling techniques.
5. Change inserts every month or more often as needed. Always change the insert when relocating the trap. Mark new inserts with the trap number and placement date.
6. Replace lure according to the schedule below. Avoid contamination when handling lures or lure packages. Use forceps if necessary for placement of septum on to insert.
7. Trap bodies eventually lose their shape, become filled with trap servicing data, or otherwise deteriorate. When this occurs, they should be replaced.

COLLECTION AND SUBMISSION OF SAMPLES: The entire trap insert, containing the suspect moth, should be collected for supervisory review. Specimens submitted to Sacramento should be cut from the stick insert and placed in a dry vial for submission. Send the specimen to Sacramento with a Standard Form 65-020, "Pest and Damage Record" (PDR). Be sure the identification slip and the outside of the package are marked "RUSH". Include the trap number in the "Remarks" section of the PDR Form.

BAITING INTERVAL: Change the septum every six weeks or sooner if temperature is above 95 degrees F for a period of time.

TRAP RELOCATION: Relocate the trap on the same relocation interval as the trap with which it is piggybacked.
