

Fresno County Employees' Retirement Association

Actuarial Valuation and Review

As of June 30, 2023

This report has been prepared at the request of the Board of Retirement to assist in administering the Fund. This valuation report may not otherwise be copied or reproduced in any form without the consent of the Board of Retirement and may only be provided to other parties in its entirety, unless expressly authorized by Segal. The measurements shown in this actuarial valuation may not be applicable for other purposes.

Board of Retirement
Fresno County Employees' Retirement Association
7772 N Palm Avenue
Fresno, CA 93711

Dear Board Members:

We are pleased to submit this Actuarial Valuation and Review as June 30, 2023. It summarizes the actuarial data used in the valuation, analyzes the preceding year's experience, and establishes the funding requirements for July 1, 2024 to June 30, 2025.

This report was prepared in accordance with generally accepted actuarial principles and practices at the request of the Board to assist in administering the Retirement Association. The census information and financial information on which our calculations were based was prepared by the staff of the Association. That assistance is gratefully acknowledged.

Segal does not audit the data provided. The accuracy and comprehensiveness of the data is the responsibility of those supplying the data. To the extent we can, however, Segal does review the data for reasonableness and consistency. Based on our review of the data, we have no reason to doubt the substantial accuracy of the information on which we have based this report and we have no reason to believe there are facts or circumstances that would affect the validity of these results.

The measurements shown in this actuarial valuation may not be applicable for other purposes. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

The actuarial calculations were directed under the supervision of Andy Yeung, ASA, MAAA, FCA and Enrolled Actuary. We are members of the American Academy of Actuaries and we meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. To the best of our knowledge, the information supplied in this actuarial valuation is complete and accurate. The assumptions used in this actuarial valuation were selected by the Board based upon our analysis and recommendations. In our opinion, the assumptions are reasonable and take into account the experience of the Plan and reasonable expectations. In addition, in our opinion, the combined effect of these assumptions is expected to have no significant bias.

We look forward to reviewing this report at your next meeting and to answering any questions.

Sincerely,

Segal

Paul Angelo, FSA, MAAA, FCA, EA
Senior Vice President and Actuary

Section 1: Actuarial Valuation Summary

Purpose and basis

This report was prepared by Segal to present a valuation of the Fresno County Employees' Retirement Association ("FCERA" or "the Association") as of June 30, 2023. The valuation was performed to determine whether the assets and contribution rates are sufficient to provide the prescribed benefits.

The contribution requirements presented in this report are based on:

- The benefit provisions of the Association, as administered by the Board;
- The characteristics of covered active members, inactive vested members, and retired members and beneficiaries as of June 30, 2023, provided by FCERA;
- The assets of the Association as of June 30, 2023, provided by FCERA;
- Economic assumptions regarding future salary increases and investment earnings adopted by the Board for the June 30, 2023 valuation;
- Other actuarial assumptions regarding employee terminations, retirement, death, etc. adopted by the Board for the June 30, 2023 valuation; and
- The funding policy adopted by the Board.

One of the general goals of an actuarial valuation is to establish contributions which over time will fully fund the Association's liabilities, and which, as a percentage of payroll, remain as level as possible for each generation of active members. Annual actuarial valuations measure the progress toward this goal, as well as test the adequacy of the contribution rates.

In preparing this valuation, we have employed generally accepted actuarial methods and assumptions to evaluate the Association's liabilities and future contribution requirements. Our calculations are based upon member data and financial information provided to us by the Association's staff. This information has not been audited by us, but it has been reviewed and found to be consistent, both internally and with prior year's information.

The contribution requirements are determined as a percentage of payroll. The Association's employer rates provide for both Normal Cost and a contribution to amortize any unfunded or overfunded actuarial accrued liabilities. In this valuation, we have applied the funding policy originally approved by the Board in 2015 and reaffirmed by the Board in 2017 and 2023. Details of the funding policy are provided in *Section 4, Exhibit 1* on pages 93 and 94.

Section 1: Actuarial Valuation Summary

A schedule of current amortization balances and payments may be found in *Section 3, Exhibit H* starting on page 73. A graphical projection of the Unfunded Actuarial Accrued Liability (UAAL) amortization balances and payments has been included in *Section 3, Exhibit I* on pages 78 and 79.

The Actuarial Standards of Practice (ASOP) No. 4 provides guidelines for actuaries to follow when measuring pension obligations. For a plan such as that offered by the Retirement Association that may utilize excess earnings to provide contribution rate offsets and additional settlement and non-statutory benefits, we are required to indicate in the valuation report that the possible impact of any such application of future excess earnings on the future financial condition of the Association has not been explicitly measured in the valuation. In particular, the balance of \$1.72 billion (negative) in the Contra Tracking Account has to be fully restored before any excess earnings can be utilized in the future to provide any of the above offsets and benefits under the Board's interest crediting policy.

The rates calculated in this report may be adopted by the Board for the fiscal year that extends from July 1, 2024 through June 30, 2025.

Section 1: Actuarial Valuation Summary

Valuation highlights

- Pgs. 84
1. The results of this valuation reflect (1) an increase in the cost-of-living adjustment (COLA) assumption from 2.50% to 2.75% per annum for General Tiers 1, 2 and 3 and Safety Tiers 1 and 2 members and (2) an increase in the interest crediting rate for member's account balance to reflect the higher COLA assumption. These changes were recommended by Segal in our Review of Economic Actuarial Assumptions and adopted by the Board for the June 30, 2023 valuation outlined in *Section 4, Exhibit 1* of this report. The assumption changes resulted in an increase of \$124.9 million, or 1.7%, in the Actuarial Accrued Liability, an increase in the average employer contribution rate of 2.25% of payroll, and an increase in the average member rate of 0.20% of payroll. Of the 2.25% of payroll increase in the employer rate, 0.20% of payroll is due to an increase in the Normal Cost and 2.05% of payroll is due to an increase in the UAAL rate.
 2. This valuation reflects one minor actuarial refinement of applying beginning of year timing of decrements for exiting from active membership status in calculating the normal cost rate. The refinement resulted in a net 0.13% of payroll decrease in the average employer contribution rate and a net 0.02% of payroll decrease in the average member contribution rate.
- Pgs. 40-41
3. The ratio of the Valuation Value of Assets to Actuarial Accrued Liabilities decreased from 88.66% to 85.06%. This ratio is one measure of funding status, and its history is a measure of funding progress. The ratio of the Market Value of Assets to the Actuarial Accrued Liability increased from 81.28% to 81.94%. These measurements are not necessarily appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligation or the need for, or the amount of, future contributions.
- Pg. 30
4. The Association's UAAL (which is based on the Valuation Value of Assets) has increased from \$784.7 million to \$1,111.7 million. The increase in UAAL is primarily due to change in the COLA assumption, investment return (after smoothing) less than the 6.50% assumed rate, COLA increases¹ greater than expected for retirees and beneficiaries with a 3% maximum COLA and individual salary increases greater than expected for active members. A complete reconciliation of the Association's UAAL is provided in *Section 2, Subsection E*.
- Pgs. 73-77, 78-79
5. The UAAL amortization layers established as of the June 30, 2008 valuation have been fully amortized as of June 30, 2023 which resulted in a decrease in the UAAL contribution rate of about 2.31% of payroll for the plan in total. For illustration we have continued to show the 2008 layers in *Section 3, Exhibit H*, but with zero "Outstanding Balance" and "Years Remaining". Note that the UAAL contributions are expected to continue to decline in the next few valuations as other layers are fully amortized, as shown in the graphical projection found in *Section 3, Exhibit I* on page 79.

¹ The annual CPI for the West Region used by the Board to set April 1, 2023 COLA came in at 8.0%. For Tiers with a maximum 3.0% COLA, there will be an actuarial loss between the expected benefit increase (2.50% assumed annually starting April 1, 2023 in the June 30, 2022 valuation) and the actual benefit increase (3.0% granted on April 1, 2023 and on every April 1 thereafter until the COLA banks used to track the difference between the 8.0% actual CPI and the actual COLA granted are fully exhausted).

Section 1: Actuarial Valuation Summary

- Pg. 24 6. The actuarial loss of \$305.4 million, or 4.1% of the Actuarial Accrued Liability, is due to an investment loss of \$138.0 million, a contribution gain of \$14.6 million, and a net experience loss from sources other than investments and contributions of \$182.0, prior to the reflection of COLA assumption change. This loss was primarily due to COLA increases greater than expected for retirees and beneficiaries with a 3% maximum COLA.
- Pg. 33 7. The average employer contribution rate calculated in this valuation increased from 45.93% of payroll to 49.26% of payroll. This increase is primarily due to change in the COLA assumption, investment return (after smoothing) less than the 6.50% assumed rate, COLA increases greater than expected for retirees and beneficiaries with a 3% maximum COLA and individual salary increases greater than expected for active members offset to some extent by the effect of June 30, 2008 UAAL amortization layers becoming fully amortized and amortizing prior year's UAAL over a larger than expected projected total payroll. A complete reconciliation of the Association's average employer rate is provided in *Section 2, Subsection F*.
- Pg. 34 8. The average member rate calculated in this valuation has increased from 9.45% of payroll to 9.58% of payroll. This change is primarily due to change in the COLA assumption. A complete reconciliation of the Association's average member rate is provided in *Section 2, Subsection F*.
- Pg. 25 9. The rate of return on the Market Value of Assets was 9.61% for the 2022-2023 plan year. The return on the Valuation Value of Assets was 4.24% for the same period after considering the gradual recognition of current and prior years' investment gains and losses. This resulted in an actuarial loss when measured against the assumed rate of return of 6.50%. This actuarial investment loss increased the average employer contribution rate by 2.25% of payroll.
- Pg. 22 10. The total unrecognized net investment loss as of June 30, 2023 is about \$232.1 million as compared to an unrecognized net investment loss of \$510.7 million in the previous valuation. This deferred investment loss of \$232.1 million will be recognized in the determination of the Actuarial Value of Assets for funding purposes in the next few years as shown in *Section 2, Subsection B*.
- The net deferred losses of \$232.1 million represent about 3.8% of the Market Value of Assets. Unless offset by future investment gains or other favorable experience, the recognition of the \$232.1 million market losses is expected to have an impact on the Association's future funded ratio and contribution rate requirements. This potential impact may be illustrated as follows:
- a. If the net deferred losses in this year's valuation were recognized immediately and entirely in the Valuation Value of Assets, the funded ratio would decrease from 85.1% to 81.9%.

For comparison purposes, if all the net deferred losses in the June 30, 2022 valuation had been recognized immediately in the June 30, 2022 valuation, the funded ratio in last year's valuation would have decreased from 88.7% to 81.3%.
 - b. If the net deferred losses in this year's valuation were recognized immediately and entirely in the Valuation Value of Assets, the average employer contribution rate would increase from 49.26% to 53.04% of payroll.

Section 1: Actuarial Valuation Summary

For comparison purposes, if all the net deferred losses in the June 30, 2022 valuation had been recognized immediately in the June 30, 2022 valuation, the average employer contribution rate in last year's valuation would have increased from 46.49% to 55.45% of payroll.

- Pg. 103 11. In preparing the breakdown of the total costs of the General Tier 1 plan into the cost to provide the "Regular" and the "Settlement" benefits, we have followed the FCERA practice of allocating the cost to provide a benefit under Section 31676.12 as the cost for the "Regular" benefit and allocating the difference between this "Regular" benefit cost and the cost to provide a benefit under Section 31676.14 plus Section 31627 as the "Settlement" benefit. In particular, this means that the difference between benefits under Sections 31676.12 and 31676.14 is considered "Settlement" and so under the Settlement Agreement could be funded out of future undistributed excess earnings. Based on discussions with Counsel, the Agreement might not be clear as to what should be considered the "Settlement" benefit. We will require guidance from the Board if and when the Board and Counsel consider the use of any future undistributed excess earnings to pay the cost of the "Settlement" benefit.
- Pg. 44 12. The Actuarial Standards Board approved Actuarial Standard of Practice No. 51 (ASOP 51) regarding risk assessment, which was first effective with FCERA's June 30, 2019 actuarial valuation. ASOP 51 requires actuaries to identify and assess risks that "may reasonably be anticipated to significantly affect the plan's future financial condition". Examples of key risks listed that are particularly relevant to FCERA are asset/liability mismatch risk, investment risk, and longevity risk. The standard also requires an actuary to consider if there is any ongoing contribution risk to the plan, however it does not require the actuary to evaluate the particular ability or willingness of contributing entities to make contributions when due, nor does it require the actuary to assess the likelihood or consequences of future changes in applicable law.

The actuary's initial assessment can be strictly a qualitative discussion about potential adverse experience and the possible effect on future results, but it may also include quantitative numerical demonstrations where informative. The actuary is also encouraged to consider a recommendation as to whether a more detailed assessment or risk report would be significantly beneficial for the intended user in order to examine particular financial risks. When making that recommendation, the actuary will take into account such factors as the plan's design, risk profile, maturity, size, funded status, asset allocation, cash flow, possible insolvency and current market conditions.

Because the actuarial valuation results are dependent on a fixed set of assumptions and data as of a specific date, there is risk that emerging results may differ, perhaps significantly, as actual experience is fluid and will not exactly track current assumptions. This potential divergence may have a significant impact on the future financial condition of the plan. We have not been engaged to perform a detailed analysis of the potential range of the impact of risk relative to the Association's future financial condition, but have included a brief discussion of key risks that may affect the Association in *Section 2, Subsection J*. A more detailed assessment of the risks tailored to specific interests or concerns of the Board would provide the Board with a better understanding of the inherent risks. This assessment would further discuss and highlight information and risks particular to FCERA such as detailed historical experience and key events, growing plan maturity, heightened contribution sensitivity to asset and liability changes, and projected sensitivity to potential future investment returns through selected scenario or stress test projections.

Section 1: Actuarial Valuation Summary

Pg. 47

Note that this year the risk assessment section includes the disclosure of a “Low-Default-Risk Obligation Measure” (LDROM). This disclosure, along with commentary on the significance of the LDROM, is a new requirement under Actuarial Standard of Practice No. 4 (ASOP 4) for all pension funding actuarial valuation reports.

13. Segal strongly recommends an actuarial funding policy that targets 100% funding of the Actuarial Accrued Liability. Generally, this implies payments that are ultimately at least enough to cover Normal Cost, interest on the UAAL and the principal balance. The funding policy adopted by the Board as described in *Section 4, Exhibit 1* meets this standard.
14. This report constitutes an actuarial valuation for the purpose of determining the actuarially determined contribution (ADC) under the plan’s funding policy and measuring the progress of that funding policy. The Net Pension Liability (NPL) and Pension Expense under Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68, for inclusion in the plan and employer’s financial statements as of June 30, 2023, will be provided separately. The accounting disclosures will utilize different methodologies from those employed in the funding valuation, as required by the GASB. However, the ADC in this valuation is expected to be used as the ADC for GASB financial reporting.
15. It is important to note that this actuarial valuation is based on plan assets as of June 30, 2023. The plan’s funded status does not reflect short-term fluctuations of the market, but rather is based on the market values on the last day of the plan year. Moreover, this actuarial valuation does not include any possible short-term or long-term impacts on mortality of the covered population that may emerge after June 30, 2023 due to COVID-19. Segal is available to prepare projections of potential outcomes of market conditions and other demographic experience upon request.

	• Average age	43.7	43.7	0.0
	Total Members:	21,211	20,489	3.5%

¹ Benefits include regular and settlement benefits but exclude non-vested supplemental benefits, if any.

Section 1: Actuarial Valuation Summary

Important information about actuarial valuations

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of a pension plan. It is an estimated forecast – the actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

In order to prepare a valuation, Segal relies on a number of input items. These include:

Plan provisions	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Participant data	An actuarial valuation for a plan is based on data provided to the actuary by the Association. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Financial information	The valuation is based on the Market Value of Assets as of the valuation date, as provided by the Association. The Association uses a “Valuation Value of Assets” that differs from market value to gradually reflect six-month changes in the Market Value of Assets in determining the contribution requirements.
Actuarial assumptions	In preparing an actuarial valuation, Segal starts by developing a forecast of the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of participants in each year, as well as forecasts of the plan’s benefits for each of those events. In addition, the benefits forecasted for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments (if any). The forecasted benefits are then discounted to a present value, typically based on an estimate of the rate of return that will be achieved on the plan’s assets. All of these factors are uncertain and unknowable. Thus, there will be a range of reasonable assumptions, and the results may vary materially based on which assumptions are selected within that range. That is, there is no right answer (except with hindsight). It is important for any user of an actuarial valuation to understand and accept this constraint. The actuarial model may use approximations and estimates that will have an immaterial impact on our results. In addition, the actuarial assumptions may change over time, and while this can have a significant impact on the reported results, it does not mean that the previous assumptions or results were unreasonable or wrong.
Models	Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprised of both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.

Section 1: Actuarial Valuation Summary

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

The actuarial valuation is prepared at the request of the Association. Segal is not responsible for the use or misuse of its report, particularly by any other party.

An actuarial valuation is a measurement at a specific date – it is not a prediction of a plan's future financial condition. Accordingly, except where otherwise noted, Segal did not perform an analysis of the potential range of future financial measures. The actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan. Future contribution requirements may differ from those determined in the valuation because of:

- Differences between actual experience and anticipated experience;
- Changes in actuarial assumptions or methods;
- Changes in statutory provisions; and
- Differences between the contribution rates determined by the valuation and those adopted by the Board.¹

Some actuarial results in this report are not rounded, but that does not imply precision.

If the Association is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.

Segal does not provide investment, legal, accounting, or tax advice. Segal's valuation is based on our understanding of applicable guidance in these areas and of the plan's provisions, but they may be subject to alternative interpretations. The Association should look to their other advisors for expertise in these areas.

While Segal maintains extensive quality assurance procedures, an actuarial valuation involves complex computer models and numerous inputs. In the event that an inaccuracy is discovered after presentation of Segal's valuation, Segal may revise that valuation or make an appropriate adjustment in the next valuation.

Segal's report shall be deemed to be final and accepted by the Association upon delivery and review. The Association should notify Segal immediately of any questions or concerns about the final content.

As Segal has no discretionary authority with respect to the management or assets of the plan, it is not a fiduciary in its capacity as actuaries and consultants with respect to the plan.

¹ FCERA has a proven track record of adopting the Actuarial Determined Contributions as determined by the valuation and based on the Board's Actuarial Funding Policy.

Section 2: Actuarial Valuation Results

A. Member data

The Actuarial Valuation and Review considers the number and demographic characteristics of covered members, including active members, inactive vested members, retired members and beneficiaries.

This section presents a summary of significant statistical data on these member groups.

More detailed information for this valuation year and the preceding valuation can be found in *Section 3, Exhibits A, B, and C.*

Member Population: 2014 – 2023

Year Ended June 30	Active Members	Inactive Vested Members ¹	Retired Members and Beneficiaries	Total Non-Actives	Ratio of Non-Actives to Actives	Ratio of Retired Members and Beneficiaries to Actives
2014	6,968	1,380	6,570	7,950	1.14	0.94
2015	7,001	3,163	6,839	10,002	1.43	0.98
2016	7,297	3,289	7,032	10,321	1.41	0.96
2017	7,353	3,411	7,200	10,611	1.44	0.98
2018	7,458	3,627	7,445	11,072	1.48	1.00
2019	7,676	3,873	7,651	11,524	1.50	1.00
2020	7,873	4,014	7,838	11,852	1.51	1.00
2021	7,660	4,308	7,982	12,290	1.60	1.04
2022	7,466	4,848	8,175	13,023	1.74	1.09
2023	7,650	5,187	8,374	13,561	1.77	1.09

¹ Effective June 30, 2015, includes inactive members under age 70 and less than five years of service with member contributions on deposit.

Section 2: Actuarial Valuation Results

Active members

Plan costs are affected by the age, years of service and compensation of active members. In this year's valuation, there were 7,650 active members with an average age of 41.8, average years of service of 10.0 years and average compensation of \$69,260. The 7,466 active members in the prior valuation had an average age of 42.1, average service of 10.3 years and average compensation of \$65,827.

Among the active members, there were none with unknown age information.

Distribution of Active Members as of June 30, 2023

Inactive members

In this year's valuation, there were 5,187 members with a vested right to a deferred or immediate vested benefit or entitled to a return of their member contributions versus 4,848 in the prior valuation.

Section 2: Actuarial Valuation Results

Retired members and beneficiaries

As of June 30, 2023, 7,169 retired members and 1,205 beneficiaries were receiving total monthly benefits of \$ 29,214,631. For comparison, in the previous valuation, there were 7,016 retired members and 1,159 beneficiaries receiving monthly benefits of \$27,663,414.

As of June 30, 2023, the average monthly benefit for retired members and beneficiaries is \$3,489, compared to \$3,384 in the previous valuation. The average age for retired members and beneficiaries is 70.7 in the current valuation, compared with 70.5 in the prior valuation.

Distribution of Retired Members and Beneficiaries as of June 30, 2023

2023	7,650	41.8	10.0	8,374	70.7	3,489

Section 2: Actuarial Valuation Results

B. Financial information

Retirement plan funding anticipates that, over the long term, both contributions (less administrative expenses) and investment earnings (less investment fees) will be needed to cover benefit payments. Retirement plan assets change as a result of the net impact of these income and expense components.

Additional financial information, including a summary of transactions for the valuation year, is presented in *Section 3, Exhibits D, E, F and G*.

It is desirable to have level and predictable plan costs from one year to the next. For this reason, the Board has approved an asset valuation method that gradually adjusts to market value. Under this valuation method, the full value of market fluctuations is not recognized in a single year and, as a result, the valuation asset value and the plan costs are more stable. The amount of the adjustment to recognize market value is treated as income, which may be positive or negative. Realized and unrealized gains and losses are treated equally and, therefore, the sale of assets has no immediate effect on the actuarial value.

Comparison of Contributions Made with Benefits for Years Ended June 30, 2014 – 2023

Section 2: Actuarial Valuation Results

Determination of Actuarial Value of Assets for Year Ended June 30, 2023

f.	Subtotal	\$(232,086,311)

Section 2: Actuarial Valuation Results

The Market Value, Actuarial Value and Valuation Value of Assets are representations of the plan's financial status. As investment gains and losses are gradually taken into account, the Actuarial Value of Assets tracks the Market Value of Assets. The Valuation Value of Assets is the actuarial value, excluding any non-valuation reserves. The Valuation Value of Assets is significant because the plan's liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the Unfunded Actuarial Accrued Liability is an important element in determining the contribution requirement.

Market Value, Actuarial Value, and Valuation Value of Assets as of June 30, 2007 – 2023

Section 2: Actuarial Valuation Results

C. Actuarial experience

To calculate any actuarially determined contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), the actuarially determined contribution will decrease from the previous year. On the other hand, the actuarially determined contribution will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single year's experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years. The change in the COLA assumption based on the Review of Economic Actuarial Assumptions report performed earlier this year is reflected in this valuation.

The net total loss is \$305.4 million, which includes \$138.0 million from investment losses, a net gain of \$14.6 million from contribution experience and \$182.0 million in losses from all other sources. The net experience variation from individual sources other than investments and contributions was 2.4% of the Actuarial Accrued Liability. A discussion of the major components of the actuarial experience is on the following pages.

Actuarial Experience for Year Ended June 30, 2023

1	Net loss from investments ¹	\$(137,977,000)
2	Net gain from contribution experience	14,553,000
3	Net loss from other experience ²	<u>(181,965,000)</u>
4	Net experience loss: 1 + 2 + 3	\$(305,389,000)

¹ Details on next page.

² See *Section 2, Subsection E* for further details. Does not include the effect of plan or assumption changes, if any.

Section 2: Actuarial Valuation Results

Investment experience

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on the Association's investment policy. The rate of return on the Market Value of Assets was 9.61% for the year ended June 30, 2023.

For valuation purposes, the assumed rate of return on the Valuation Value of Assets is 6.50% (based on the June 30, 2022 actuarial valuation). The actual rate of return on a valuation basis for the 2022-2023 plan year was 4.24%. Since the actual return for the year was less than the assumed return, the plan experienced an actuarial loss during the year ended June 30, 2023 with regard to its investments.

Investment Experience for Year Ended June 30, 2023

	Market Value	Actuarial Value	Valuation Value
1 Net investment income	\$537,385,003	\$258,734,590	\$258,734,590
2 Average value of assets	5,592,519,869	6,103,256,592	6,103,256,592
3 Rate of return: 1 ÷ 2	9.61%	4.24%	4.24%
4 Assumed rate of return	6.50%	6.50%	6.50%
5 Expected investment income: 2 x 4	363,513,791	396,711,678	396,711,678
6 Actuarial gain/(loss): 1 - 5	\$173,871,212	\$(137,977,088)	\$(137,977,088)

Section 2: Actuarial Valuation Results

Because actuarial planning is long term, it is useful to see how the assumed investment rate of return has followed actual experience over time. The chart below shows the rate of return on an actuarial and valuation basis compared to the actual market value investment return for the last ten years, including averages over select time periods.

Investment Return – Market Value, Actuarial Value and Valuation Value: 2014 – 2023

Year Ended June 30	Market Value Investment Return		Actuarial Value Investment Return		Valuation Value Investment Return	
	Amount	Percent	Amount	Percent	Amount	Percent
2014	\$579,606,657	16.63%	\$318,423,932	9.03%	\$315,164,400	8.98%
2015	(3,936,293)	(0.10%)	278,588,357	7.29%	279,206,627	7.31%
2016	(4,319,056)	(0.11%)	203,088,149	4.97%	203,089,850	4.97%
2017	417,603,730	10.44%	271,225,694	6.35%	271,333,784	6.36%
2018	312,556,012	7.11%	293,356,239	6.49%	293,356,239	6.49%
2019	254,693,657	5.43%	188,324,865	3.93%	188,324,865	3.93%
2020	12,966,492	0.26%	266,963,194	5.38%	266,963,194	5.38%
2021	1,348,533,275	27.33%	485,275,407	9.29%	485,275,407	9.29%
2022	(621,985,430)	(9.93%)	461,294,311	8.10%	461,294,311	8.10%
2023	537,385,003	9.61%	258,734,590	4.24%	258,734,590	4.24%
Most recent five-year geometric average return		5.85%	6.17%		6.17%	
Most recent ten-year geometric average return		6.23%	6.49%		6.49%	

Section 2: Actuarial Valuation Results

Section 2, Subsection B described the actuarial asset valuation method that gradually recognizes fluctuations in the market value rate of return. The goal of this is to stabilize the actuarial rate of return and to produce more level pension plan costs.

Market, Actuarial and Valuation Rates of Return for Years Ended June 30, 2007 – 2023

Section 2: Actuarial Valuation Results

Contributions

Contributions for the year ended June 30, 2023 totaled \$289.3 million, compared to the projected amount of \$275.2 million. This resulted in a net gain of \$14.6 million from contribution experience for the year, when adjusted for timing.

Non-investment experience

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- the extent of turnover among participants,
- retirement experience (earlier or later than projected),
- mortality (more or fewer deaths than projected),
- the number of disability retirements (more or fewer than projected),
- salary increases (greater or smaller than projected), and
- cost-of-living adjustments (COLAs) greater or lower than anticipated.

The net loss from this other experience for the year ended June 30, 2023 amounted to \$182.0 million, which is 2.4% of the Actuarial Accrued Liability. See *Section 2, Subsection E* for a detailed development of the Unfunded Actuarial Accrued Liability.

Section 2: Actuarial Valuation Results

D. Other changes in the actuarial accrued liability

The Actuarial Accrued Liability as of June 30, 2023 is \$7.4 billion, an increase of \$0.5 billion, or 7.6%, from the Actuarial Accrued Liability as of the prior valuation date. The liability is expected to grow each year with Normal Cost and interest, and to decline due to benefit payments made. Additional fluctuations can occur due to actual experience that differs from expected (as discussed in the previous subsection).

This valuation reflects one minor actuarial refinement of applying beginning of year timing of decrements for exiting from active membership status in calculating the normal cost rate. The refinement resulted in a net 0.13% of payroll decrease in the average employer contribution rate and a net 0.02% of payroll decrease in the average member contribution rate.

Actuarial assumptions

The assumption changes reflected in this report were based on the June 30, 2023 Review of Economic Actuarial Assumptions report dated July 11, 2023. The assumption changes resulted in an increase of \$124.9 million, or 1.7%, in the Actuarial Accrued Liability, an increase in the average employer contribution rate of 2.25% of payroll, and an increase in the average member rate of 0.20% of payroll. Of the 2.25% of payroll increase in the employer rate, 0.20% of payroll is due to an increase in the Normal Cost and 2.05% of payroll is due to an increase in the UAAL rate.

The assumption change increases the anticipated annual COLA from 2.50% to 2.75% for the Legacy members enrolled in those tiers with a maximum 3.0% COLA. Details on actuarial assumptions and methods are in *Section 4, Exhibit 1*.

Plan provisions

There were no changes in plan provisions since the prior valuation.

A summary of plan provisions is in *Section 4, Exhibit 2*.

Section 2: Actuarial Valuation Results

E. Development of unfunded actuarial accrued liability

Development for Year Ended June 30, 2023 (\$ in '000s)

1	Unfunded Actuarial Accrued Liability at beginning of year	\$784,723
2	Total Normal Cost at middle of year ¹	118,561
3	Expected administrative expenses	6,388
4	Expected employer and member contributions	(275,236)
5	Interest	<u>46,971</u>
6	Expected Unfunded Actuarial Accrued Liability at end of year	\$681,407
7	Changes due to:	
	a. Investment return less than expected (after "smoothing")	\$137,977
	b. Actual contributions greater than expected in item 4 ²	(14,553)
	c. Individual salary increases greater than expected	50,623
	d. COLA increases greater than expected ³	133,548
	e. Other experience gains ⁴	(2,206)
	f. Changes in economic assumptions	<u>124,921</u>
	Total changes	\$430,310
8	Unfunded Actuarial Accrued Liability at end of year	\$1,111,717

Note: The sum of items 7c through 7e is \$181,965,000 and equals the "Net loss from other experience" shown in *Section 2, Subsection C*.

¹ Excludes administrative expense load.

² Mainly from scheduled one-year lag in implementing contribution rates from June 30, 2022 valuation.

³ The annual CPI for the West Region used by the Board to set April 1, 2023 COLA came in at 8.0%. For Tiers with a maximum 3.0% COLA, there will be an actuarial loss between the expected benefit increase (2.50% assumed annually starting April 1, 2023 in the June 30, 2022 valuation) and the actual benefit increase (3.0% granted on April 1, 2023 and on every April 1 thereafter until the COLA banks used to track the difference between the 8.0% actual CPI and the actual COLA granted are fully exhausted).

⁴ Other differences in actual versus expected experience including (but not limited to) retirement, mortality, disability and termination experiences.

Section 2: Actuarial Valuation Results

F. Recommended contribution

The recommended contribution is equal to the employer Normal Cost payment and a payment on the Unfunded Actuarial Accrued Liability. As of June 30, 2023, the average recommended employer contribution is 49.26% of compensation.

The Board sets the funding policy used to calculate the recommended contribution based on layered 15-year amortization period as a level percentage of payroll. See *Section 4, Exhibit 1* for further details on the funding policy. Based on this policy, there is no negative amortization and each amortization layer is fully funded in 15 years. As shown in the graphical projection of the UAAL amortization balances and payments found in *Section 3, Exhibit I*, before taking into consideration the deferred investment gains/losses that will be recognized in the next several valuations, the UAAL of the Plan is expected to be fully amortized by 2038, assuming all assumptions are realized and contribution are made in accordance with the funding policy.

The contribution requirement as of June 30, 2023 is based on the data previously described, the actuarial assumptions and Plan provisions described in *Section 4*, including all changes affecting future costs adopted at the time of the actuarial valuation, actuarial gains and losses, and changes in the actuarial assumptions.

The current funding policy is intended to fully fund the cost of the benefits and to allocate the cost of benefits reasonably and equitably over time while minimizing the volatility of employer contributions. The recommended contribution is expected to remain level as a percent of payroll, except when any current amortization layer is fully amortized, assuming there are no future actuarial gains or losses. Furthermore, the funded ratio is expected to increase as the UAAL is methodically funded by employer contributions.

Section 2: Actuarial Valuation Results

Average Recommended Employer Contribution for Year Ended June 30

	2023		2022	
	Amount (\$ in '000s)	% of Projected Compensation	Amount (\$ in '000s)	% of Projected Compensation
1 Total Normal Cost ¹	\$126,672	23.91%	\$120,722	24.56%
2 Expected member contributions	<u>50,765</u>	<u>9.58%</u>	<u>46,753</u>	<u>9.51%</u>
3 Employer Normal Cost: 1 - 2	\$75,907	14.33%	\$73,969	15.05%

6 Unfunded Actuarial Accrued Liability: 4 – 5	\$1,111,717		\$784,723	
7 Payment on Unfunded Actuarial Accrued Liability ²	\$185,068	34.93%	\$154,514	31.44%
8 Total average recommended employer contribution: 3 + 7	<u>\$260,975</u>	<u>49.26%</u>	<u>\$228,483</u>	<u>46.49%</u>
9 Projected compensation	\$529,841		\$491,462	

Note: Contributions are assumed to be paid at the middle of the year.

¹ Includes administrative expense load.

Section 2: Actuarial Valuation Results

Reconciliation of average recommended employer contribution rate

The chart below details the changes in the average recommended employer contribution rate from the prior valuation to the current year's valuation.

Reconciliation from June 30, 2022 to June 30, 2023

	Contribution Rate	Estimated Annual Dollar Amount ¹ (\$ in '000s)
1 Average Recommended Employer Contribution as of June 30, 2022	45.93%	\$243,354
2 Effect of investment return less than expected (after "smoothing")	2.25%	\$11,921
3 Effect of actual contributions greater than expected ²	(0.24%)	(1,272)
4 Effect of individual salary increases greater than expected	0.82%	4,345
5 Effect of amortizing prior year's UAAL over a larger than expected projected total payroll	(1.26%)	(6,676)
6 Effect of COLA increases greater than expected	2.17%	11,498
7 Effect of the 2008 UAAL amortization layers being fully amortized	(2.31%)	(12,239)
8 Effect of changes in active member demographics amongst tiers on Normal Cost	(0.01%)	(53)
9 Effect of other experience gains ³	(0.34%)	(1,824)
10 Effect of changes in economic assumptions	<u>2.25%</u>	<u>11,921</u>
11 Total change	3.33%	\$17,621
12 Average Recommended Employer Contribution as of June 30, 2023	49.26%	\$260,975

¹ Based on June 30, 2023 projected annual compensation of \$529,841,000.

² Mainly from scheduled one-year lag in implementing contribution rates from June 30, 2022 valuation.

³ Other differences in actual versus expected experience including (but not limited to) retirement, mortality, disability and termination experiences. This also includes the impact of the effect of a minor actuarial refinement discussed on page 29 that reduced the average employer contribution rate by 0.13% of payroll.

Section 2: Actuarial Valuation Results

Reconciliation of average recommended member contribution rate

The chart below details the changes in the average recommended member contribution rate from the prior valuation to the current year's valuation.

Reconciliation from June 30, 2022 to June 30, 2023

	Contribution Rate	Estimated Annual Dollar Amount ¹ (\$ in '000s)
1 Average Recommended Member Contribution as of June 30, 2022	9.45%	\$50,058
2 Effect of changes in active member demographic amongst tiers, including a minor actuarial refinement	(0.07%)	\$(353)
3 Effect of change in explicit administrative expense load	0.00%	0
4 Effect of changes in economic assumptions	<u>0.20%</u>	<u>1,060</u>
5 Total change	0.13%	707
6 Average Recommended Member Contribution as of June 30, 2023	9.58%	\$50,765

¹ Based on June 30, 2023 projected annual compensation of \$529,841,000.

Section 2: Actuarial Valuation Results

G. Funded status

A commonly reported piece of information regarding the Association's financial status is the funded ratio. These ratios compare the Market, Actuarial and Valuation Value of Assets to the Actuarial Accrued Liability of the Association. Higher ratios indicate a relatively well-funded plan while lower ratios may indicate recent changes to actuarial assumptions, funding of the plan below actuarial requirements, poor asset performance, or a variety of other causes.

The chart below depicts a history of the funded ratio for the Association. The chart on the next page shows the Association's schedule of funding progress for the last ten years.

The funded status measures shown in this valuation are appropriate for assessing the need for or amount of future contributions. However, they are not necessarily appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations. As the chart below shows, the measures are different depending on whether the Market, Actuarial, or Valuation Value of Assets is used.

Funded Ratio for Years Ended June 30, 2007 – 2023

Section 2: Actuarial Valuation Results

Section 2: Actuarial Valuation Results

H. Actuarial balance sheet

An overview of the plan's funding is given by an Actuarial Balance Sheet. In this approach, first the amount and timing of all future payments that will be made by the plan for current participants is determined. Then these payments are discounted at the valuation interest rate to the date of the valuation, thereby determining the present value, referred to as the Actuarial Present Value of Future Benefits of the plan.

Second, this Actuarial Present Value of Future Benefits is compared to the assets. The "assets" for this purpose include the net amount of assets already accumulated by the plan, the present value of future member contributions, the present value of future employer Normal Cost contributions, and the present value of future employer amortization payments for the Unfunded Actuarial Accrued Liability.

Actuarial Balance Sheet for Year Ended June 30, 2023 (\$ in 000s)

	Regular	Settlement Benefit Section 6	Settlement Benefit Section 8	Settlement Benefit Section 9	Total
Actuarial Present Value of Future Benefits

Note: Please refer to *Section 4, Exhibit 2* for definition of Regular and Settlement Sections 6, 8 and 9 benefits.

Section 2: Actuarial Valuation Results

I. Volatility ratios

Retirement plans are subject to volatility in the level of required contributions. This volatility tends to increase as retirement plans become more mature.

The Asset Volatility Ratio (AVR), which is equal to the Market Value of Assets divided by total payroll, provides an indication of the potential contribution volatility for any given level of investment volatility. A higher AVR indicates that the plan is subject to a greater level of contribution volatility. This is a current measurement since it is based on the current level of assets.

The current AVR is about 11.5. This means that a 1% asset gain or loss (relative to the assumed investment return) translates to about 11.5% of one year's payroll. Since actuarial gains and losses are amortized over 15 years, there would be a 1.0% of payroll decrease/(increase) in the required contribution for each 1% asset gain/(loss).

The Liability Volatility Ratio (LVR), which is equal to the Actuarial Accrued Liability divided by payroll, provides an indication of the longer-term potential for contribution volatility for any given level of investment volatility. This is because, over an extended period of time, the plan's assets should track the plan's liabilities.

The LVR also indicates how volatile contributions will be in response to changes in the Actuarial Accrued Liability due to actual experience or to changes in actuarial assumptions. The current total plan LVR is about 14.0, but is 13.3 for General compared to 17.8 for Safety. This means, for example, that assumption changes will have a greater impact on employer contribution rates for Safety than for General.

The chart below shows how the asset and liability volatility ratios have varied over time.

Volatility Ratios for Years Ended 2014 – 2023

Year Ended June 30	Asset Volatility Ratio			Liability Volatility Ratio		
	General	Safety	Total	General	Safety	Total

Section 2: Actuarial Valuation Results

J. Risk assessment

Because the actuarial valuation results are dependent on a fixed set of assumptions and data as of a specific date, there is risk that emerging results may differ, perhaps significantly, as actual experience is fluid and will not exactly track current assumptions. This potential divergence may have a significant impact on the future financial condition of the plan.

This report does not contain a detailed analysis of the potential range of future measurements, but does include a concise discussion of some of the primary risks that may affect the plan's future financial condition. A more detailed assessment of the risks tailored to specific interests or concerns of the Board would provide the Board with a better understanding of the inherent risks in the plan that can inform both financial preparation and future decision making. This assessment would enable us to work with the Board to highlight and illustrate particular risks or potential future outcomes they may be interested in discussing and could include scenario testing, sensitivity testing, stress testing and stochastic modeling.

This section provides descriptions and basic assessments of the primary risks that are likely to have an ongoing influence on the plan's financial health, as well as a discussion of historical trends and maturity measures:

Risk assessments

- Asset/Liability Mismatch Risk (the potential that future plan experience does not affect asset and liability values in the same way, causing them to diverge)

The most significant asset/liability mismatch risk to the plan is investment risk, as discussed below. In fact, investment risk has the potential to impact asset/liability mismatch in two ways. The first mismatch is evident in annual valuations: when asset values deviate from assumptions they are typically independent from liability changes. The second mismatch can be caused when systemic asset deviations from assumptions may signal the need for an assumption change, which causes liability values and contribution rates to move in the opposite direction from any change in the expected experience of asset growth rates.

Asset/liability mismatch can also be caused by demographic assumption risk such as longevity, which affects liabilities but have no impact on asset levels. This risk is also discussed below.

- Investment Risk (the risk that investment returns will be different than expected)

The investment return assumption is a long-term, static assumption for valuation purposes even though in reality market experience can be quite volatile in any given year. That volatility can cause significant changes in the financial condition of the Association, affecting both funded status and contribution rates. The inherent year-to-year volatility is reduced by smoothing through the Actuarial Value of Assets, however investment experience can still have a sizable impact. As discussed in *Section 2, Subsection I, Volatility Ratios*, on page 43, a 1% asset gain or loss (relative to the assumed investment return) translates to about 11.5% of one-year's payroll. Since actuarial gains

Section 2: Actuarial Valuation Results

and losses are amortized over 15 years, there would be a 1.0% of payroll decrease/(increase) in the required contribution for each 1% asset gain or loss.

The single year market value rate of return over the last 10 years has ranged from a low of -9.93% to a high of 27.33%.

- Longevity Risk (the risk that mortality experience will be different than expected)

The actuarial valuation includes current life expectancy assumptions and an expectation of future improvement in life expectancy, which are significant assumptions given the relatively long duration of liabilities for pension plans. Emerging plan experience that does not match these expectations will result in increases or decreases in the actuarially determined contribution over time. This risk can be reduced by using tables appropriate for the plan (public experience tables) that are weighted by benefit levels, and by using generational mortality projections. Effective with the June 30, 2019 valuation, the Board has adopted amount weighted mortality tables with generational mortality projections.

- Other Risks

In addition to longevity, the valuation includes a variety of other assumptions that are unlikely to match future experience exactly. One example is projected salary scales over time. As salary is central to the determination of benefits paid in retirement, deviations from the projected salary scales could have a material impact on the benefits anticipated for each member. Examples of demographic assumptions include retirement, termination and disability assumptions, and will likely vary in significance for different groups (for example, disability assumptions are typically more significant for Safety groups).

Some plans also carry significant contribution risk, defined as the potential for actual future contributions deviating from expected future contributions. However, the employer has a proven track-record of making the Actuarially Determined Contributions based on the Board's Actuarial Funding Policy, so contribution risk is minimal.

Evaluation of historical trends

Past experience can help demonstrate the sensitivity of key results to the plan's actual experience. Over the past ten years:

- The funded percentage on the Valuation Value of Assets basis has increased from 78.4% to 85.1%. This is primarily due to contributions made to amortize the UAAL (i.e., amortizing each layer of UAAL over 15 years as a level percentage of pay). For a more detailed history see *Section 2, Subsection G, Funded Status* starting on page 40.
- The geometric average investment return on the Valuation Value of Assets over the last 10 years was 6.49%. This includes a high of a 9.29% return and a low of 3.93%. The average over the last 5 years was 6.17%. For more details see the Investment Return table in *Section 2, Subsection C* on page 26.

Section 2: Actuarial Valuation Results

- The primary source of new UAAL was the strengthening of assumptions through multiple assumption changes. For example, the assumption changes in 2013 reduced the discount rate from 7.75% to 7.25% and updated mortality tables, adding \$259¹ million in unfunded liability. The assumption changes in 2016 reduced the discount rate from 7.25% to 7.00% and again updated mortality tables, adding \$241² million in unfunded liability. The assumption changes in 2021 reduced the discount rate from 7.00% to 6.50%, adding \$203³ million in unfunded liability. The assumption changes in 2023 increased the COLA assumption from 2.50% to 2.75% for the Legacy members enrolled in those tiers with a maximum 3.0% COLA, adding \$125⁴ million in unfunded liability. For more details on the unfunded liability changes see *Section 3, Exhibit H, Table of Amortization Bases* starting on page 73.
- The plan's funding policy effectively deals with these unfunded liabilities over time. This can be seen most clearly in *Section 3, Exhibit I, Projection of UAAL Balances and Payments* provided on pages 78 and 79.

Maturity measures

In the last 10 years the ratio of members in pay status to active participants has increased from 0.94 to 1.09. An increased ratio indicates that the plan has grown in maturity over time. This is to be expected, but is also informative for understanding plan sensitivity to particular risks. For more details see *Section 2, Subsection A, Member Data* on page 17.

As pension plans mature, the cash needed to fulfill benefit obligations will increase over time. Therefore, cash flow projections and analysis should be performed to assure that the Plan's asset allocation is aligned to meet emerging pension liabilities. For the prior year, benefits paid were \$55 million more than contributions received (gross of administrative expenses). Plans with high levels of negative cash flows may have a need for a larger allocation to income generating assets, which can create a drag on investment return. However, this plan currently has relatively low levels of negative cash flows over the past several years. For more details on historical cash flows see the Comparison of Contributions with Benefits in *Section 2, Subsection B, Financial Information* on page 21.

A further discussion of plan maturity measures and how they relate to changes in assets and liabilities is included in *Section 2, Subsection I, Volatility Ratios* starting on page 43.

¹ Includes additional \$7 million in Section 8 UAAL and Section 9 UAAL due to changes in actuarial assumptions as of June 30, 2013.

² Includes additional \$7 million in Section 8 UAAL and Section 9 UAAL due to changes in actuarial assumptions as of June 30, 2016.

³ Includes additional \$5 million in Section 8 UAAL and Section 9 UAAL due to changes in actuarial assumptions as of June 30, 2021.

⁴ Includes additional \$0.2 million in Section 8 UAAL and Section 9 UAAL due to changes in actuarial assumptions as of June 30, 2023.

Section 2: Actuarial Valuation Results

Low-Default-Risk Obligation Measure (LDROM)

In December 2021, the Actuarial Standards Board issued a revision of Actuarial Standard of Practice No. 4 (ASOP 4) *Measuring Pension Obligations and Determining Pension Plan Costs or Contributions*. One of the revisions to ASOP 4 requires the disclosure of a Low-Default-Risk Obligation Measure (LDROM) when performing a funding valuation. The LDROM presented in this report is calculated using the same methodology and assumptions used to determine the Actuarial Accrued Liability (AAL) used for funding, except for the discount rate. The LDROM is required to be calculated using “a discount rate...derived from low-default-risk fixed income securities whose cash flows are reasonably consistent with the pattern of benefits expected to be paid in the future.”

The LDROM is a calculation assuming a plan's assets are invested in an all-bond portfolio, generally lowering expected long-term investment returns. The discount rate selected and used for this purpose is the Bond Buyer General Obligation 20-year Municipal Bond Index Rate, published at the end of each week. The last published rate in June of the measurement period, by The Bond Buyer, is 3.65% for use effective June 30, 2023. This is the rate used to determine the discount rate for valuing reported public pension plan liabilities in accordance with Governmental Accounting Standards when plan assets are projected to be insufficient to make projected benefit payments, and the 20-year period reasonably approximates the duration of public pension plan liabilities. The LDROM is not used to determine a plan's funded status or Actuarially Determined Contribution Rate. The plan's expected return on assets, currently 6.50%, is used for these calculations.

As of June 30, 2023, the LDROM for the Plan is \$11.05 billion. The difference between the plan's AAL of \$7.44 billion and the LDROM can be thought of as the increase in the AAL if the entire portfolio were invested in low-default-risk securities. Alternatively, this difference could also be viewed as representing the expected savings from investing in the plan's diversified portfolio compared to investing only in low-default-risk securities.

ASOP 4 requires commentary to help the intended user understand the significance of the LDROM with respect to the funded status of the plan, plan contributions, and the security of participant benefits. In general, if plan assets were invested exclusively in low-default-risk securities, the funded status would be lower and the Actuarially Determined Contribution would be higher. While investing in a portfolio with low-default-risk securities may be more likely to reduce investment volatility and the volatility of employer contributions, it also may be more likely to result in higher employer contributions or lower benefits.

• Retirements	(214)	(94)	308	N/A	N/A	0
• New disabilities	(3)	(4)	(9)	16	N/A	0
• Return to work	55	(55)	0	0	N/A	0
• Died with or without beneficiary	(13)	(2)	(153)	(9)	47 ¹	(130)
• Data adjustments	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>	<u>(1)</u>	<u>(1)</u>
Number as of June 30, 2023	7,650	5,187	6,756	413	1,205	21,211

¹ This is the net increase of beneficiaries after subtracting the number of beneficiaries who died during the year.

Section 3: Supplemental Information

Exhibit D: Summary statement of income and expenses on a market value basis

	Year Ended June 30, 2023	Year Ended June 30, 2022
Net assets at market value at the beginning of the year	\$5,623,399,292	\$6,282,921,666
Contribution income:		
• Employer contributions	\$242,221,282	\$251,733,095
• Member contributions	47,116,556	42,037,901
• Less administrative fees	<u>(6,411,999)</u>	<u>(6,460,332)</u>
Net contribution income	\$282,925,839	\$287,310,664
Investment income:		
• Interest, dividends and other income	\$565,680,150	\$(592,482,523)
• Less investment fees	<u>(28,295,147)</u>	<u>(29,502,907)</u>
Net investment income	<u>\$537,385,003</u>	<u>\$(621,985,430)</u>
Total income available for benefits	\$820,310,842	\$(334,674,766)
Less benefit payments:		
• Service retirement and disability benefits	\$(332,643,004)	\$(313,701,517)
• Death benefits	(2,464,900)	(1,778,498)
• Member refunds	(4,244,559)	(4,175,109)
• Health benefit subsidies	<u>(5,332,222)</u>	<u>(5,192,484)</u>
Net benefit payments	<u>\$(344,684,685)</u>	<u>\$(324,847,608)</u>
Change in net assets at market value	\$475,626,157	\$(659,522,374)
Net assets at market value at the end of the year	\$6,099,025,449	\$5,623,399,292

Note: Results may not add due to rounding.

Section 3: Supplemental Information

Exhibit E: Summary statement of plan assets

	June 30, 2023	June 30, 2022
Cash equivalents	\$190,561,281	\$313,022,169
Prepaid expenses	\$140,408	\$175,851
Accounts receivable:		
• Investment trades	\$93,919,771	\$189,423,835
• Interest and dividends	18,320,319	9,965,057
• Contributions and others	11,502,337	11,324,399
• Securities lending	<u>78,177</u>	<u>668,056</u>
Total accounts receivable	\$123,820,604	\$211,381,347
Investments:		
• Equities	\$ 2,526,244,720	\$2,292,469,983
• Fixed income	1,506,897,136	1,221,585,357
• Real estate	99,900,303	91,143,289
• Securities lending collateral	151,713,501	389,645,159
• Capital assets	11,632,292	12,593,103
• Private markets and derivatives	<u>1,805,305,785</u>	<u>1,616,150,715</u>
Total investments at market value	<u>\$6,101,693,737</u>	<u>\$5,623,587,606</u>
Total assets	\$6,416,216,030	\$6,148,166,973
Accounts payable:		
• Investment trades	\$(162,809,878)	\$(133,096,422)
• Cash collateral payable for securities lending	(151,713,501)	(389,645,160)
• Securities lending bank and broker fees	(17,969)	(153,643)
• Others	<u>(2,649,233)</u>	<u>(1,872,456)</u>
Total accounts payable	\$(317,190,581)	\$(524,767,681)
Net assets at market value	\$6,099,025,449	\$5,623,399,292
Net assets at actuarial value	\$6,331,111,759	\$6,134,136,015
Net assets at valuation value	\$6,331,111,759	\$6,134,136,015

Note: Results may not add due to rounding.

Section 3: Supplemental Information

Exhibit F: Summary of reported reserve information

	June 30, 2023	June 30, 2022
Used in Development of Valuation Value of Assets:		
<i>Regular Valuation Reserves</i>		
• Members' Accumulated Contributions	\$410,909,405	\$386,143,587
• Current Service Reserve	1,916,356,370	1,752,852,392

Assumption Change	June 30, 2023	19,959	15	<u>19,959</u>	15	<u>1,722</u>
Subtotal				\$253,104		\$33,473

Note: Results may not add due to rounding.

¹ The outstanding balance includes the full General Section 8 UAAL and General Section 9 UAAL.

² The initial amounts are only available for periods based on prior audit and valuation results reviewed or prepared by Segal.

³ The final payment to fully amortize the layer established as of the June 30, 2008 valuation was \$1.7 million as shown in the June 30, 2022 valuation.

⁴ Includes a refinement to the application of the Entry Age Actuarial Cost Method.

Section 3: Supplemental Information

Total				\$1,111,717		\$180,400

Note: Results may not add due to rounding.

¹ The outstanding balance includes the full Section 8 UAAL and Section 9 UAAL.

² The initial amounts are only available for periods based on prior audit and valuation results reviewed or prepared by Segal.

³ The final payment to fully amortize the layer established as of the June 30, 2008 valuation was \$11.4 million as shown in the June 30, 2022 valuation.

⁴ Includes a refinement to the application of the Entry Age Actuarial Cost Method.

⁵ These amounts together with the \$0.2 million loss as referenced in footnote 1 for the change in the Section 8 and 9 UAAL in the June 30, 2023 valuation equals to \$124.9 million loss, which is the total UAAL changes in as shown on page 30.

Section 3: Supplemental Information

Exhibit I: Projection of UAAL balances and payments

Outstanding Balance of \$1,112 Million in Net UAAL as of June 30, 2023

Section 3: Supplemental Information

Exhibit I: Projection of UAAL balances and payments (continued)

Section 3: Supplemental Information

Exhibit J: Definition of pension terms

The following list defines certain technical terms for the convenience of the reader:

Actuarial Accrued Liability for Actives:	The equivalent of the accumulated normal costs allocated to the years before the valuation date.
Actuarial Accrued Liability for Pensioners and Beneficiaries:	The single-sum value of lifetime benefits to existing pensioners and beneficiaries. This sum takes account of life expectancies appropriate to the ages of the annuitants and the interest that the sum is expected to earn before it is entirely paid out in benefits.
Actuarial Cost Method:	A procedure allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability that are used to determine the actuarially determined contribution.
Actuarial Gain or Loss:	A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., assets earn more than projected, salary increases are less than assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results yield in actuarial liabilities that are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.
Actuarially Equivalent:	Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.
Actuarial Present Value (APV):	The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. Each such amount or series of amounts is: Adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.) Multiplied by the probability of the occurrence of an event (such as survival, death, disability, withdrawal, etc.) on which the payment is conditioned, and Discounted according to an assumed rate (or rates) of return to reflect the time value of money.

Section 3: Supplemental Information

Actuarial Present Value of Future Plan Benefits:	The Actuarial Present Value of benefit amounts expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age, anticipated future compensation, and future service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.
Actuarial Valuation:	The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB, such as the Actuarially Determined Contribution (ADC) and the Net Pension Liability (NPL).
Actuarial Value of Assets (AVA):	The value of the Association's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly plans use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.
Actuarially Determined:	Values that have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.
Actuarially Determined Contribution (ADC):	The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Association's funding policy. The ADC consists of the Employer Normal Cost and the Amortization Payment.
Amortization Method:	A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.
Amortization Payment:	The portion of the pension plan contribution, or ADC, that is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

Section 3: Supplemental Information

Assumptions or Actuarial Assumptions:	The estimates upon which the cost of the Association is calculated, including: <u>Investment return</u> - the rate of investment yield that the Association will earn over the long-term future; <u>Mortality rates</u> - the death rates of employees and pensioners; life expectancy is based on these rates; <u>Retirement rates</u> - the rate or probability of retirement at a given age or service; <u>Disability rates</u> - the probability of disability retirement at a given age; <u>Termination rates</u> - the rates at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement; <u>Salary increase rates</u> - the rates of salary increase due to inflation, real wage growth and merit and promotion increases.
Closed Amortization Period:	A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example, if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Open Amortization Period.
Decrements:	Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or termination.
Defined Benefit Plan:	A retirement plan in which benefits are defined by a formula applied to the member's compensation and/or years of service.
Defined Contribution Plan:	A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.
Employer Normal Cost:	The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.
Experience Study:	A periodic review and analysis of the actual experience of the Association that may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.
Funded Ratio:	The ratio of the Valuation Value of Assets (VVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the Market Value of Assets (MVA), rather than the VVA.
Investment Return:	The rate of earnings of the Fund from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.

Section 3: Supplemental Information

Normal Cost:	That portion of the Actuarial Present Value of Future Benefits allocated to a valuation year by the Actuarial Cost Method. Any payment with respect to an Unfunded Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits that are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated.
Open Amortization Period:	An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. If the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period with level percentage of payroll is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never decrease, but will become smaller each year, in relation to covered payroll, if the actuarial assumptions are realized.
Payroll or Compensation:	Compensation Earnable and Pensionable Compensation expected to be paid to active members during the twelve months following the valuation date. Only Compensation Earnable and Pensionable Compensation that would possibly go into the determination of retirement benefits are included.
Unfunded Actuarial Accrued Liability:	The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative, in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.
Valuation Date or Actuarial Valuation Date:	The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.
Valuation Value of Assets:	The Actuarial Value of Assets reduced by the value of non-valuation reserves.

Section 4: Actuarial Valuation Basis

Inflation Rate:	Increase of 2.50% per year.																																						
Member Contribution Crediting Rate:	2.75%, compounded semi-annually. (The difference between the 6.50% net investment return assumption and 2.75% is credited to the other valuation reserves.)																																						
Cost of Living Adjustments (COLA):	Retiree COLA increases of 2.75% per year for General Tiers 1, 2 and 3, and Safety Tiers 1 and 2. General and Safety Tiers 4 and 5 receive no COLA increases. For members that have COLA banks, we assume they receive 3.00% COLA increases until their COLA banks are exhausted and 2.75% thereafter.																																						
Payroll Growth:	Inflation of 2.50% per year plus “across the board” real salary increases of 0.50% per year.																																						
Increase in Internal Revenue Code Section 401(a)(17) Compensation Limit:	Increase of 2.50% per year from the valuation date.																																						
Increase in Section 7522.10 Compensation Limit:	Increase of 2.50% per year from the valuation date.																																						
Salary Increases:	The annual rate of compensation increase includes: inflation at 2.50%, plus “across the board” salary increases of 0.50% per year, plus the following merit and promotion increases: <table><tr><th rowspan="2">Years of Service</th><th colspan="2">Rate (%)</th></tr><tr><th>General</th><th>Safety</th></tr><tr><td>Less than 1</td><td>9.00</td><td>8.50</td></tr><tr><td>1-2</td><td>8.00</td><td>8.00</td></tr><tr><td>2-3</td><td>7.00</td><td>6.75</td></tr><tr><td>3-4</td><td>5.25</td><td>5.00</td></tr><tr><td>4-5</td><td>4.75</td><td>4.50</td></tr><tr><td>5-6</td><td>3.75</td><td>3.75</td></tr><tr><td>6-7</td><td>3.25</td><td>3.50</td></tr><tr><td>7-8</td><td>2.25</td><td>2.75</td></tr><tr><td>8-9</td><td>1.50</td><td>2.00</td></tr><tr><td>9-10</td><td>1.25</td><td>1.60</td></tr><tr><td>10 & Over</td><td>1.10</td><td>1.50</td></tr></table>	Years of Service	Rate (%)		General	Safety	Less than 1	9.00	8.50	1-2	8.00	8.00	2-3	7.00	6.75	3-4	5.25	5.00	4-5	4.75	4.50	5-6	3.75	3.75	6-7	3.25	3.50	7-8	2.25	2.75	8-9	1.50	2.00	9-10	1.25	1.60	10 & Over	1.10	1.50

Section 4: Actuarial Valuation Basis

Demographic Assumptions:

Post-Retirement Mortality Rates:

Healthy

- **General Members:** Pub-2010 General Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 5% for males and increased by 10% for females, projected generationally with the two-dimensional mortality improvement scale MP-2021.
- **Safety Members:** Pub-2010 Safety Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 5% for males, projected generationally with the two-dimensional mortality improvement scale MP-2021.

Disabled

- **General Members:** Pub-2010 Non-Safety Disabled Retiree Amount-Weighted Mortality Table (separate tables for males and females) with rates increased by 5% for males and decreased by 5% for females, projected generationally with the two-dimensional mortality improvement scale MP-2021.
- **Safety Members:** Pub-2010 Safety Disabled Retiree Amount-Weighted Mortality Table (separate tables for males and females) with rates increased by 5% for females, projected generationally with the two-dimensional mortality improvement scale MP-2021.

Beneficiary

- **Beneficiaries not currently in Pay Status:** Pub-2010 General Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 5% for males and increased by 10% for females, projected generationally with the two-dimensional mortality improvement scale MP-2021.
- **Beneficiaries in Pay Status:** Pub-2010 Contingent Survivor Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 10%, projected generationally with the two-dimensional mortality improvement scale MP-2021.

The Pub-2010 mortality tables and adjustments as shown above reasonably reflect the mortality experience as of the measurement date. These mortality tables were adjusted to future years using the generational projection to reflect future mortality improvement between the measurement date and those years.

Section 4: Actuarial Valuation Basis

Pre-Retirement Mortality Rates:

- **General Members:** Pub-2010 General Employee Amount-Weighted Above-Median Mortality Table (separate tables for males and females), projected generationally with the two-dimensional mortality improvement scale MP-2021.
- **Safety Members:** Pub-2010 Safety Employee Amount-Weighted Above-Median Mortality Table (separate tables for males and females), projected generationally with the two-dimensional mortality improvement scale MP-2021.

65	0.41	0.27	0.35	0.20
70	0.61	0.44	0.66	0.39

All pre-retirement deaths are assumed to be non-service connected.

¹ Generational projections beyond the base year (2010) are not reflected in the above mortality rates.

Mortality Rates for Member Contributions:

- **General Members:** Pub-2010 General Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 5% for males and increased by 10% for females, projected 30 years with the two-dimensional mortality improvement scale MP-2021, weighted 35% male and 65% female.
- **Safety Members:** Pub-2010 Safety Healthy Retiree Amount-Weighted Above-Median Mortality Table (separate tables for males and females) with rates increased by 5% for males, projected 30 years with the two-dimensional mortality improvement scale MP-2021, weighted 80% male and 20% female.

Section 4: Actuarial Valuation Basis

Disability Incidence Rates:

Age	Rate (%)	
	General	Safety
20	0.01	0.05
25	0.01	0.11
30	0.02	0.33
35	0.03	0.54
40	0.09	0.69
45	0.19	0.96
50	0.26	1.34
55	0.30	2.10
60	0.37	2.80
65	0.55	3.00
70	0.65	3.00

65% of General disabilities are assumed to be service connected disabilities (duty) and the other 35% are assumed to be non-service connected (ordinary) disabilities.

100% of Safety disabilities are assumed to be service connected (duty) disabilities.

Section 4: Actuarial Valuation Basis

Termination Rates:

Years of Service	Rate (%)	
	General	Safety
Less than 1	18.00	13.00
1-2	11.25	7.50
2-3	9.25	6.50
3-4	8.00	4.50
4-5	7.50	4.00
5-6	6.50	3.25
6-7	5.50	3.00

65 & Over	100.00	100.00	100.00

Retirement rate for Safety Tier 1 and Safety Tier 2 is 100% after a member accrues a benefit of 100% of final average earnings.

Section 4: Actuarial Valuation Basis

Retirement Age and Benefit for Deferred Vested Members:	For current and future deferred vested members, retirement assumptions are as follows: <table> <tr> <td>General with Reciprocity:</td><td>60</td></tr> <tr> <td>General without Reciprocity:</td><td>56</td></tr> <tr> <td>Safety with Reciprocity:</td><td>56</td></tr> <tr> <td>Safety without Reciprocity:</td><td>52</td></tr> </table> 20% of future General and 25% of future Safety deferred vested members terminated with less than five years of service will continue to work for a reciprocal employer. For those future deferred vested members terminated with five or more years of service, 30% of General and 45% of Safety will continue to work for a reciprocal employer. For reciprocals, 4.10% and 4.50% compensation increases are assumed per annum for General and Safety, respectively.	General with Reciprocity:	60	General without Reciprocity:	56	Safety with Reciprocity:	56	Safety without Reciprocity:	52
General with Reciprocity:	60								
General without Reciprocity:	56								
Safety with Reciprocity:	56								
Safety without Reciprocity:	52								
Future Benefit Accruals:	1.0 year of service per year of employment.								
Unknown Data for Members:	Same as those exhibited by members with similar known characteristics. If not specified, members are assumed to be male.								
Definition of Active Members:	First day of pay period following employment.								
Form of Payment:	All active and inactive members are assumed to elect the unmodified option at retirement.								
Percent Married:	For all active and inactive members, 65% of male members and 55% of female members are assumed to be married at pre-retirement death or retirement.								
Age and Gender of Spouse:	For all active and inactive members, male members are assumed to have a female spouse who is 3 years younger than the member and female members are assumed to have a male spouse who is 2 years older than the member.								
Annual Leave Conversion:	Eligibility for annual leave plans is determined based on hire date along with other factors. The following assumptions for the amount of service converted from unused annual leave at retirement are used: <u>New Annual Leave Plan:</u> 45 hours per year of service. <u>Annual Leave Plan II:</u> 20 hours per year of service. <u>Vacation/Sick Leave Plans:</u> 30 hours per year of service for General and 45 hours per year of service for Safety. <u>Annual Leave IV Plan or the Old Annual Leave Plan:</u> Based on actual hours in a member's frozen time off bank.								

Section 4: Actuarial Valuation Basis

<u>Actuarial Funding Policy</u>	
Actuarial Cost Method:	Entry Age Actuarial Cost Method. Entry Age is the age at the member's hire date or the entry age provided for member contribution rate purposes, whichever is later. Normal Cost and Actuarial Accrued Liability are calculated on an individual basis and are based on costs allocated as a level percentage of compensation, with Normal Cost determined as if the current benefit formula for each individual has always been in effect (i.e., "replacement life within a tier").
Actuarial Value of Assets:	Market value of assets (MVA) less unrecognized returns in each of the last nine semi-annual accounting periods. Unrecognized returns are equal to the difference between the actual market return and the expected return on the market value, and are recognized semi-annually over a five-year period. The actuarial value of assets is further adjusted, if necessary, to be within 30% of the market value of assets.
Valuation Value of Assets:	The actuarial value of assets, reduced by the value of the non-valuation reserves.

Section 4: Actuarial Valuation Basis

Amortization Policy:	The UAAL, (i.e., the difference between the Actuarial Accrued Liability and the Valuation Value of Assets), as of June 30, 2003 valuation is being amortized over a declining period with 10 years remaining as of June 30, 2023. Any new UAAL as a result of assumption changes, method changes and actuarial gains or losses identified in the annual valuation as of June 30, 2011 and later will be amortized over a period of 15 years. Any new UAAL as a result of plan amendments will be amortized over a period of 15 years. Any new UAAL as a result of Golden Handshakes or Early Retirement Incentive Programs (ERIP) will be amortized over a period of up to 5 years. The UAAL shall be amortized over “closed” amortization periods so that the amortization period for each layer decreases by one year with each actuarial valuation. The UAAL shall be amortized as a level percentage of payroll so that the amortization amount in each year during the amortization period shall be expected to be a level percentage of covered payroll, taking into consideration the current assumption for general payroll increase. If the AAL is overfunded (i.e., the Valuation Value of Assets exceeds 120% of the Actuarial Accrued Liability so that there is a surplus), such surplus and any subsequent surpluses will be amortized over an “open” amortization period of 30 years. Any prior UAAL amortization layers will be considered fully amortized, and any subsequent UAAL, will be amortized over 15 years as the first of a new series of amortization layers.
<u>Other Actuarial Methods</u>	
Employer Contributions:	Employer contributions consist of two components: <i>Normal Cost</i> The annual contribution rate that, if paid annually from a member’s first year of membership through the year of retirement, would accumulate to the amount necessary to fully fund the member’s retirement-related benefits. Accumulation includes annual crediting of interest at the assumed investment earning rate. The contribution rate is determined as a level percentage of the member’s compensation. <i>Contribution to the Unfunded Actuarial Accrued Liability (UAAL)</i> The annual contribution rate that, if paid annually over the UAAL amortization period, would accumulate to the amount necessary to fully fund the UAAL. Accumulation includes annual crediting of interest at the assumed investment earning rate. The contribution (or rate credit in the case of a negative UAAL) is calculated to remain as a level percentage of future active member payroll (including payroll for new members as they enter the Association) assuming a constant number of active members. In order to remain as a level percentage of payroll, amortization payments (credits) are scheduled to increase at the annual rate of 3.00% (i.e., 2.50% inflation plus 0.50% “across the board” salary increase). The amortization policy is described on the previous page. The recommended employer contributions are provided in <i>Section 2, Subsection F</i>.

Section 4: Actuarial Valuation Basis

Member Contributions:

Non-Tier 5 Members (i.e., Non-CalPEPRA)

Articles 6 and 6.8 of the 1937 Act define the methodology to be used in the calculation of member basic contribution rates for non-Tier 5 General members and Safety members, respectively. The basic contribution rate is determined so that the accumulation of a member's basic contributions made in a given year until a certain age will be sufficient to fund an annuity at that age that is equal to:

- 1/200 of One-Year Average Final Compensation at age 60 for General Tier 1
- 1/240 of One-Year Average Final Compensation at age 60 for General Tier 2
- 1/200 of Three-Year Average Final Compensation at age 55 for General Tier 3
- 1/120 of Three-Year Average Final Compensation at age 60 for General Tier 4
- 1/200 of One-Year Average Final Compensation at age 50 for Safety Tiers 1 and 2
- 1/100 of Three-Year Average Final Compensation at age 50 for Safety Tier 4

In addition, as a result of the Settlement Agreement, General Tier 1 and Safety Tier 1 members are required to make additional basic contributions in order to receive the Settlement Benefit. The total basic Regular plus Settlement rate is:

- 1/160 of One-Year Average Final Compensation at age 55 for General Tier 1
- 1/160 of One-Year Average Final Compensation at age 50 for Safety Tier 1

It is assumed that contributions are made annually at the same rate, starting at entry age. In addition to their basic contributions, members in Tiers 1, 2 and 3 pay one-half of the total normal cost necessary to fund their cost-of-living benefits. There are no cost-of-living benefits provided in General and Safety Tiers 4.

Accumulation includes semi-annual crediting of interest at the assumed investment earning rate.

Tier 5 Members (i.e., CalPEPRA)

Pursuant to Section 7522.30(a) of the Government Code, General and Safety Tiers 5 members are required to contribute at least 50% of the Normal Cost rate. We further understand that different rules may have to be applied for collectively bargained employees, non-represented, managerial or other supervisory employees (reference Section 7522.30(e)). In preparing the Normal Cost rates in this report, we have assumed that exactly 50% of the Normal Cost would be paid by the Tier 5 members and we have not taken into account the requirements of Section 7522.30(e).

The member contribution rates for all members are provided in *Section 4, Exhibit 3*.

Section 4: Actuarial Valuation Basis

Internal Revenue Code Section 415:	Section 415 of the Internal Revenue Code (IRC) specifies the maximum benefits that may be paid to an individual from a defined benefit plan and the maximum amounts that may be allocated each year to an individual's account in a defined contribution plan. A qualified pension plan may not pay benefits in excess of the Section 415 limits. The ultimate penalty for non-compliance is disqualification: active participants could be taxed on their vested benefits and the IRS may seek to tax the income earned on the plan's assets. In particular, Section 415(b) of the IRC limits the maximum annual benefit payable at the Normal Retirement Age to a dollar limit of \$160,000 indexed for inflation. That limit is \$265,000 for 2023. Normal Retirement Age for these purposes is age 62. These are the limits in simplified terms. They must be adjusted based on each participant's circumstances, for such things as age at retirement, form of benefits chosen and after tax contributions. Non-CalPEPRA benefits in excess of the limits may be paid through a qualified governmental excess plan that meets the requirements of Section 415(m). Legal Counsel's review and interpretation of the law and regulations should be sought on any questions in this regard. Non-CalPEPRA contribution rates determined in this valuation have not been reduced for the Section 415 limitations for active and inactive vested members. Actual limitations will result in gains as they occur.
Prior Actuarial Assumptions:	
<i>Member Contribution Crediting Rate:</i>	2.50%, compounded semi-annually. (The difference between the 6.50% net investment return assumption and 2.50% is credited to the other valuation reserves.)
<i>Cost of Living Adjustments (COLA):</i>	Retiree COLA increases of 2.50% per year for General Tiers 1, 2 and 3, and Safety Tiers 1 and 2. General and Safety Tiers 4 and 5 receive no COLA increases. For members that have COLA banks, we assume they receive 3.00% COLA increases until their COLA banks are exhausted and 2.50% thereafter.

Section 4: Actuarial Valuation Basis

Exhibit 2: Summary of plan provisions

This exhibit summarizes the major provisions of the Association included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Plan Year:	July 1 through June 30
Membership Eligibility:	Membership with FCERA usually begins with the first day of the pay period following the date of appointment to a permanent position of at least 50% full-time.
<i>General and Safety Tier 1</i>	All General and Safety members hired on or before February 26, 2006 and General and Safety members of certain bargaining units hired after February 26, 2006.
<i>General and Safety Tier 2</i>	General and Safety members of certain bargaining units hired after February 26, 2006 and former Tier 1 members hired on or before February 26, 2006 who have elected to transfer to Tier 2.
<i>General Tier 3</i>	General members of certain bargaining units hired after December 17, 2007 and those eligible Tier 2 members hired on or before December 17, 2007.
<i>General and Safety Tier 4</i>	General and Safety County members hired on or after June 11, 2012 and prior to January 1, 2013.
<i>General and Safety Tier 5</i>	All General and Safety members hired on or after January 1, 2013.
Final Compensation for Benefit Determination:	
<i>General and Safety Tiers 1 & 2</i>	Highest one-year average final compensation (\$31462.1) (FAS1).
<i>General Tiers 3 & 4 and Safety Tier 4</i>	Highest three-year average final compensation (\$31462) (FAS3).
<i>General and Safety Tier 5</i>	Highest consecutive three years of pensionable compensation (\$7522.10(c), \$7522.32 and \$7522.34) (FAS3).
Compensation Limit:	
<i>General Tiers 1, 2, 3 & 4 and Safety Tiers 1, 2 & 4</i>	For members with membership dates on or after July 1, 1996, Compensation Earnable is limited to Internal Revenue Code Section 401(a)(17). The limit as of July 1, 2023 is \$330,000. The limit is indexed for inflation on an annual basis.
<i>General and Safety Tier 5</i>	Pensionable Compensation is limited to \$146,042 for 2023 (\$175,250, if not enrolled in Social Security). The limit is indexed for inflation on an annual basis.
Service:	Years of service (Yrs).

Section 4: Actuarial Valuation Basis

Service Retirement Eligibility:

<i>General Tiers 1, 2, 3 & 4</i>	Age 50 with 10 years of service, or age 70 regardless of service, or after 30 years regardless of age (§31672).
<i>General Tier 5</i>	Age 52 with 5 years of service (§7522.20(a)) or age 70 regardless of service (§31672.3).
<i>Safety Tiers 1, 2 & 4</i>	Age 50 with 10 years of service, or age 70 regardless of service, or after 20 years regardless of age (§31663.25).
<i>Safety Tier 5</i>	Age 50 with 5 years of service (§7522.25(d)) or age 70 regardless of service (§31672.3).

Benefit Formula:

<i>General Tier 1</i> <i>Regular plus Settlement benefit pursuant to Ventura Settlement Agreement¹</i>	Retirement Age	Benefit Formula
	50	$(1.86\% \times \text{FAS1} - 1/3 \times 1.86\% \times \$350 \times 12) \times \text{Yrs}$
	55	$(2.50\% \times \text{FAS1} - 1/3 \times 2.50\% \times \$350 \times 12) \times \text{Yrs}$
	60 and over	$(3.27\% \times \text{FAS1} - 1/3 \times 3.27\% \times \$350 \times 12) \times \text{Yrs}$

<i>Safety Tier 4 (§31664)</i>	Retirement Age	Benefit Formula
	50	$(2.00\% \times \text{FAS3} - 1/3 \times 2.00\% \times \$350 \times 12) \times \text{Yrs}$
	55 and over	$(2.62\% \times \text{FAS3} - 1/3 \times 2.62\% \times \$350 \times 12) \times \text{Yrs}$
<i>Safety Tier 5 (§7522.25(d))</i>	Retirement Age	Benefit Formula
	50	$2.00\% \times \text{FAS3} \times \text{Yrs}$
	55	$2.50\% \times \text{FAS3} \times \text{Yrs}$
	57 and over	$2.70\% \times \text{FAS3} \times \text{Yrs}$

¹ For funding purposes, contribution rate for Regular benefit is calculated pursuant under Section §31664 and the contribution rate for Settlement benefit is the difference between the benefit described above and the benefit under Section §31664.

Section 4: Actuarial Valuation Basis

Maximum Benefit:	
<i>General Tiers 1, 2, 3 & 4 and Safety Tiers 1, 2 & 4</i>	100% of Final Compensation (§31676.14, §31676.16, §31676.15, §31676.1, §31664 and §31664.2).
<i>General and Safety Tier 5</i>	There is no Final Compensation limit on the maximum retirement benefit.
Non-Service Connected Disability:¹	
<i>General Tiers 1, 2, 4 & 5</i>	
<i>Eligibility</i>	Five years of service (§31720).
<i>Benefit Formula</i>	1.5% per year of service. If the benefit does not exceed one-third of Final Compensation, the service is projected to 65, but the total benefit cannot be more than one-third of Final Compensation.
<i>General Tier 3</i>	
<i>Eligibility</i>	Five years of service (§31720).
<i>Benefit Formula</i>	1.8% per year of service. If the benefit does not exceed one-third of Final Compensation, the service is projected to 65, but the total benefit cannot be more than one-third of Final Compensation.
<i>Safety Tiers 1, 2, 4 & 5</i>	
<i>Eligibility</i>	Five years of service (§31720).
<i>Benefit Formula</i>	1.8% per year of service. If the benefit does not exceed one-third of Final Compensation, the service is projected to 55, but the total benefit cannot be more than one-third of Final Compensation. For all members, 100% of the Service Retirement benefit will be paid, if greater.
Service Connected Disability:¹	
<i>All Members</i>	
<i>Eligibility</i>	No age or service requirements (§31720).
<i>Benefit Formula</i>	50% of the Final Compensation or 100% of Service Retirement benefit, if greater (§31727.4).

¹ For General and Safety Tier 1 members who retire because of disability, there is an allocation of the value of their disability benefits made by the Association's Pension Administration System between the "Regular" and "Settlement" benefits assuming those members would have been eligible to retire and collect a service retirement benefit. While it does not change the total contribution rates paid by each of the employer and the employee, consistent with the prior valuations we have continued in this valuation to adjust the allocation of the rates between "Regular" and "Settlement" benefits so as to be consistent with the allocation made by the Association's Pension Administration System.

Section 4: Actuarial Valuation Basis

Pre-Retirement Death:	
<i>All Members</i>	
<i>Eligibility</i>	None.
<i>Basic lump sum benefit</i>	Refund of member contributions with interest, plus one month's compensation for each year of service, to a maximum of six months' compensation (§31781).
<i>Service Connected Death</i>	50% of Final Compensation or 100% of Service Retirement benefit, if greater, payable to spouse or minor children (§31787).
<i>Vested Members</i>	
<i>Eligibility</i>	Five years of service.
<i>Basic benefit</i>	60% of the greater of Service or Non-Service Connected Disability Retirement benefit payable to surviving eligible spouse or eligible children (§31765.1, §31781.1), in lieu of the basic lump sum benefit above (§31781).
<i>Service Connected Death</i>	50% of Final Compensation or 100% of Service Retirement benefit, if greater, payable to spouse or registered domestic partner (§31787).
Death After Retirement:	
<i>All Members</i>	
<i>Service Retirement or Non-Service Connected Disability Retirement</i>	Unless another option was selected at retirement, 60% of member's unmodified allowance continued to eligible spouse (§31760.1). An eligible spouse is a surviving spouse who was married to the member at least one year prior to the day of retirement (§31760.1), or at least two years prior to the date of death, having attained age 55 on or prior to the date of death (§31786.1).
<i>Service Connected Disability Retirement</i>	Unless another option was selected at retirement, 100% of member's unmodified allowance continued to eligible spouse (§31786).
Withdrawal Benefits:	
<i>Less than Five Years of Service</i>	Refund of accumulated employee contributions with interest, or earned benefit at age 70 (§31628). Effective January 1, 2003, a member may also elect to leave contributions on deposit in the retirement fund (§31629.5).
<i>Five or More Years of Service</i>	If contributions left on deposit, a member is entitled to earned benefits commencing at any time after eligible to retire (§31700).

Section 4: Actuarial Valuation Basis

Post-retirement Cost-of-Living Benefits:	
General Tiers 1, 2 & 3 and Safety Tiers 1 & 2	Future changes based on changes to the Consumer Price Index for the West Region to a maximum of 3% per year, excess "banked" (\$31870.1).
General Tiers 4 & 5 and Safety Tiers 4 & 5	None.
Pre-Retirement Conversion of Annual Leave:	
<i>General members</i>	
<i>New Annual Leave Plan (5Y)</i>	Members who entered the Association on or before October 10, 1983 and in bargaining groups who have agreed to this plan may convert hours in excess of 1,100 hours to service at retirement.
<i>Annual Leave Plan II (5Y)</i>	Members who entered the Association after October 10, 1983 with accruals in the 5Y leave plan and in bargaining groups who have agreed to this plan may convert hours in excess of 400 hours to service at retirement.
<i>Annual Leave IV Plan or the Old Annual Leave Plan (5O)</i>	Members hired on or after October 10, 1983 or prior to that date, respectively, and who are in bargaining groups who have agreed to these plans, management or are unrepresented will convert any frozen hours balance to service at retirement.
<i>Vacation/Sick Leave Plans (5Q, 5S and 5W)</i>	Members who entered the Association on or after December 14, 1998 and in bargaining groups who have agreed to these plans may convert all accrued sick leave hours to service at retirement.
<i>Safety members:</i>	
<i>New Annual Leave Plan (5Y)</i>	Members who entered the Association on or before October 10, 1983 and in bargaining groups who have agreed to this plan may convert hours in excess of 1,100 hours to service at retirement.
<i>Annual Leave Plan II (5Y)</i>	Members who entered the Association after October 10, 1983 with accruals in the 5Y leave plan and in bargaining groups who have agreed to this plan may convert hours in excess of 400 hours to service at retirement.
<i>Annual Leave IV Plan or the Old Annual Leave Plan (5O)</i>	Members hired on or after October 10, 1983 or prior to that date, respectively, and who are in bargaining groups who have agreed to these plans, management or are unrepresented will convert any frozen hours balance to service at retirement.
<i>Vacation/Sick Leave Plans (5Q, 5S and 5W)</i>	Members who entered the Association on or after December 14, 1998 and in bargaining groups who have agreed to these plans may convert all accrued sick leave hours to service at retirement.

Section 4: Actuarial Valuation Basis

Ventura Settlement Benefits:

<i>Section 6</i>	For Tier 1 members retiring on or after January 1, 2001 - The difference between the regular plus settlement benefits, and the regular benefit (i.e., \$31676.12 for General Tier 1 and \$31664 for Safety Tier 1).
<i>Section 8</i>	For Tier 1 members who retired prior to January 1, 2001 - \$15 per month per year of service, up to a maximum monthly benefit of \$450.
<i>Section 9</i>	All retired members (excluding General Tiers 4 & 5 and Safety Tier 5 members) are entitled to a \$3 per month per year of service benefit. Future increase in this benefit will depend on the amount of future undistributed earnings. For the purpose of this valuation, it is assumed that there will be no future increase in the amount of benefit.

Member Contributions:

	Please refer to <i>Section 4, Exhibit 3</i> for the specific rates.
<i>General Tier 1</i>	
<i>Regular Basic</i>	Entry-age based rates that provide for an annuity at age 60 equal to 1/200 of FAS1 (§31621.5).
<i>Regular Plus Settlement Basic</i>	Entry-age based rates that provide for an annuity at age 55 equal to 1/160 of FAS1 (§31627).
<i>Cost-of-Living</i>	Entry-age based rates that provide for one-half of future Cost-of-Living costs.
<i>General Tier 2</i>	
<i>Basic</i>	Entry-age based rates that provide for an annuity at age 60 equal to 1/240 of FAS1 (§31621.4).
<i>Cost-of-Living</i>	Entry-age based rates that provide for one-half of future Cost-of-Living costs.
<i>General Tier 3</i>	
<i>Basic</i>	Entry-age based rates that provide for an annuity at age 55 equal to 1/200 of FAS3 (§31621.6 and §31630).
<i>Cost-of-Living</i>	Entry-age based rates that provide for one-half of future Cost-of-Living costs.
<i>General Tier 4</i>	
<i>Basic</i>	Entry-age based rates that provide for an annuity at age 60 equal to 1/120 of FAS3 (§31621).
<i>Cost-of-Living</i>	None.

Section 4: Actuarial Valuation Basis

Member Contributions (continued):	
<i>Safety Tier 1</i>	
<i>Regular Basic</i>	Entry-age based rates that provide for an annuity at age 50 equal to 1/200 of FAS1 (\$31639.5).
<i>Regular Plus Settlement Basic</i>	Entry-age based rates that provide for an annuity at age 50 equal to 1/160 of FAS1 (\$31627).
<i>Cost-of-Living</i>	Entry-age based rates that provide for one-half of future Cost-of-Living costs.
<i>Safety Tier 2</i>	
<i>Regular Basic</i>	Entry-age based rates that provide for an annuity at age 50 equal to 1/200 of FAS1 (\$31639.5).
<i>Cost-of-Living</i>	Entry-age based rates that provide for one-half of future Cost-of-Living costs.
<i>Safety Tier 4</i>	
<i>Regular Basic</i>	Entry-age based rates that provide for an annuity at age 50 equal to 1/100 of FAS3 (\$31639.25).
<i>Cost-of-Living</i>	None.
<i>General and Safety Tier 5</i>	Non-entry age based rates that provide for 50% of total Normal Cost Rate.
Other Information:	Non-Tier 5 Safety members with 30 or more years of service are exempt from paying member contributions. The same applies for General members hired on or before March 7, 1973.
Changed Plan Provisions:	There have been no changes in plan provisions since the last valuation.

Note: The summary of major plan provisions is designed to outline principal plan benefits as interpreted for purposes of the actuarial valuation. If the Association should find the plan summary not in accordance with the actual provisions, the Association should alert Segal, to ensure the proper provisions are valued.

Section 4: Actuarial Valuation Basis

Exhibit 3: Member contribution rates

Comparison of Total Member Rate from June 30, 2022 (Current) and June 30, 2023 (New) Valuations

General Tier 1 ¹			
Entry Age	Current ²	New ²	Change
25	9.67%	10.05%	0.38%
35	11.08%	11.53%	0.45%
45	13.10%	13.63%	0.53%

General Tier 3 ¹			
Entry Age	Current ²	New ²	Change
25	7.62%	7.93%	0.31%
35	8.74%	9.10%	0.36%
45	10.27%	10.69%	0.42%

General Tier 5			
Entry Age	Current ²	New ²	Change
All Ages ³	8.01%	7.95%	(0.06%)

General Tier 2 ¹			
Entry Age	Current ²	New ²	Change
25	6.38%	6.69%	0.31%
35	7.30%	7.66%	0.36%
45	8.43%	8.85%	0.42%

Section 4: Actuarial Valuation Basis

Exhibit 3: Member contribution rates (continued)

Tier 5 Members' Contribution Rates Based on the June 30, 2023 Actuarial Valuation
(as a % of monthly payroll)

All Entry Ages	Total
General Tier 5	7.95%
Safety Tier 5	13.09%

Administrative Expenses: 0.21% of payroll added to the rates

Note: Tier 5 member contribution rate is 50% of the Normal Cost rates. It is our understanding that in the determination of pension benefits under the CalPEPRA formulas, the compensation that can be taken into account for 2023 is \$146,042. For an employer that is not enrolled in Social Security, the maximum amount is \$175,250 (reference Section 7522.10). These amounts are adjusted for changes to the Consumer Price Index for All Urban Consumers after 2023 (reference Section 7522.10(d)).

Section 4: Actuarial Valuation Basis

Exhibit 4: Schedule of UAAL and associated funded ratios

	Regular Benefit (\$ in '000s)	Settlement Benefit (\$ in '000s)	Total (\$ in '000s)
A. Actuarial Accrued Liability	\$5,903,419	\$1,539,410	\$7,442,829
B. Valuation Value of Assets	\$5,106,683	\$1,224,429	\$6,331,112
C. UAAL (A – B)	\$796,736	\$314,981	\$1,111,717
D. Funded Ratio (B / A)	86.50%	79.54%	85.06%
