

EXHIBIT F

**Mitigation Monitoring and Reporting Program
Initial Study No. 7764
(Including Conditions of Approval and Project Notes)**

Mitigation Measures					
Mitigation Measure No.*	Impact	Mitigation Measure Language	Implementation Responsibility	Monitoring Responsibility	Time Span
1.	Cultural Resources	In the event that cultural resources are unearthed during ground-disturbing activities, all work shall be halted in the area of the find. An Archeologist shall be called to evaluate the findings and make any necessary mitigation recommendations. If human remains are unearthed during ground-disturbing activities, no further disturbance is to occur until the Fresno County Sheriff-Coroner has made the necessary findings as to origin and disposition. All normal evidence procedures should be followed by photos, reports, video, etc. If such remains are determined to be Native American, the Sheriff-Coroner must notify the Native American Commission within 24 hours.	Applicant	Applicant/PW&P	During ground-disturbing activities
2.	Biological Resources	A qualified biologist shall conduct surveys for nesting SWHA following the survey methods developed by the Swainson's Hawk Technical Advisory Committee (SWHA TAC 2000) prior to project implementation. The SWHA TAC recommends a ½ mile survey distance from the limits of disturbance. The survey protocol includes early season surveys to assist the project proponent in implementing necessary avoidance and minimization measures and in identifying active nest sites prior to initiating ground-disturbing activities.	Applicant	Applicant/PW&P	During ground-disturbing activities
3.	Biological Resources	If ground-disturbing activities take place during the normal bird breeding season (March 1 through September 15), CDFW recommends additional pre-activity surveys for active nests be conducted by a qualified biologist no more than 10 days prior to the start of the Project implementation to ensure that no SWHA have begun nesting activities near the Project site. CDFW recommends a no-distance buffer of ½ mile be delineated around active nests until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival.	Applicant	Applicant/PW&P	During ground-disturbing activities
4.	Biological Resources	In the event an active SWHA nest is detected during surveys and the ½ mile no-disturbance buffer around the nest cannot feasibly be implemented, consultation with CDFW is warranted to discuss how to implement the project and avoid	Applicant	Applicant/PW&P	During ground-disturbing activities

		take. If take cannot be avoided, take authorization through the issuance of an Incidental Take Permit (ITP), pursuant to Fish and Game Code section 2081 (b) is necessary to comply with CESA.			
5.	Biological Resources	If any known raptor nesting trees are removed, even outside of the nesting, they shall be replaced with an appropriate native tree species planting at a ratio of 3:1 at or near the Project site or in another area that will be protected in perpetuity to reduce impacts resulting from the loss of nesting habitat.	Applicant	Applicant/PW&P	During ground-disturbing activities
